Handbook of Perception, Volume II:

Psychophysical Judgment and Measurement brings together a very large, diverse, and widely scattered literature on human perception, with emphasis on psychophysical judgement and measurement. The book reviews the history of research on choice,

judgement, and measurement in order to provide a background for contemporary work. This volume is organized into five sections encompassing 14 chapters and begins with a historical background on psychophysics and the evolution of thinking about the central measurement problem in judgement. The basic psychological context in which choice and judgement occur is considered next, touching on topics such as the problem of information selection and the sources of bias and variability in judgemental processes in relation to memory. The chapters that follow discuss the theoretical frame of measurement models and their applications. In particular, examples of algebraic fundamental measurement, algebraic derived measurement, and probabilistic derived measurement are given. The book also introduces the reader to various psychophysical scaling methods and theories of scaling. This book will serve as a basic source and reference work for psychologists and natural scientists, as well as for anyone in the arts or sciences or those who are interested in human perception. *Mise en pratique* American Mathematical Soc. Refreshing and revealing in equal measure, this innovative volume conducts a critical/self-critical exploration of the impact of culture on the ill-fated Oslo peace process. The authors negotiators and scholars alike demolish stereotypes as they construct an unusually subtle and sophisticated understanding of how culture influences negotiating styles. Culture, they argue, did not cause the Oslo breakdown but it did play an influential, intervening role at several levels:

---

coloring the thinking of political leaders, shaping domestic politics on both sides, and affecting each side's evaluation of the other's beliefs and intentions. After an overview by William Quandt of the history of the Oslo process and the impact of international factors such as U.S. mediation, the volume presents a detailed analysis of first Palestinian, and then Israeli negotiating styles between 1993 and 2001. Omar Dajani, a former legal advisor to the Palestinian team, explains how elements of Palestinian identity and national development have hobbled the Palestinians' ability to negotiate effectively. Aharon Klieman, a distinguished Israeli analyst, traces a long-standing clash between diplomatic and security subcultures within the Israeli political elite and reveals how Israeli identity has helped create a negotiating style that opts for short-term gains while undermining the prospects for a lasting agreement. Drawing on these insights, Tamara Wittes concludes the volume by offering not only a fresh appreciation of culture's influence on interethnic negotiations but also lessons for future negotiators in the Israeli-Palestinian conflict. Schacter, Gilbert, Wegner, and Nock's *Psychology, Third Edition* is widely acclaimed for captivating students with contemporary psychology research on

the major topics of the introductory course, while helping them develop critical thinking skills that will stay with them beyond the course term. Expert coverage of the DSM-5, quirky examples of thinking gone awry, scenarios based on common psychological misconceptions, and contributions from new co-author Matthew Nock highlight the new edition. And now, this breakthrough text is available in a version created just for Canadian students and teachers. It offers the same fascinating writing, helpful study tools, and keen eye for intriguing stories as *Psychology, Third Edition*, but with a wide range of Canadian examples and impactful work by Canadian researchers incorporated throughout. Welcome Canadian author, Ingrid Johnsrude. Ingrid's principal area of investigation is the neural basis of understanding speech, and she leads experiments examining how utterances are transformed into acoustic signals and then into meaning via a variety of cognitive processes. Her investigations span multiple levels—from

understanding the brain structures involved in hearing and comprehension to observing the ways listeners deal with challenges such as background noise.

Heinz Kohut's work represents an important departure from the Freudian tradition of psychoanalysis. A founder of the Self Psychology movement in America, he based his practice on the belief that narcissistic vulnerabilities play a significant part in the suffering that brings people for treatment. Written predominantly for a psychoanalytic audience Kohut's work is often difficult to interpret. Siegel uses examples from his own practice to show how Kohut's innovative theories can be applied to other forms of treatment.

Individual Development and Social Change: Explanatory Analysis represents a convergence of three lines of emphasis now visible in developmental research and theory building. The three are (1) the life course as a focus for the study of development and social change, and their interrelationships; (2) the life-span orientation to the study of individual development, with its acknowledgment of the salience of contextual features for understanding development; and (3) the growth of methodological innovations that provide more appropriate and powerful ways of exploiting data gathered to describe and explain developmental change processes. The book opens with a study on how major cultural change originates and unfolds over time. This is followed by

separate chapters on the use of sequential designs for explanatory analyses; evolutionary aspects of social and individual development; the concepts of the theory of causal and weak causal regressive dependence; and the concepts of age, period, and cohort from the perspective of developmental psychology. Subsequent chapters examine development and aging as lifelong processes of historical populations; the methodological integration of natural and cultural science perspectives in developmental psychology; and application of the multifaceted methodology to the mutuality of constraint between sociocultural group and individual dynamics.
