This monograph discusses statistics and risk estimates applied to radiation damage under the presence of measurement errors. The first part covers nonlinear measurement error models, with a particular emphasis on efficiency of regression parameter estimators. In the second part, risk estimation in models with measurement errors is considered. Efficiency of the methods presented is verified using data from radio-epidemiological studies.

Contents: Part I - Estimation in regression models with errors in covariates Measurement error models Linear models with classical error Polynomial regression with known variance of classical error Nonlinear and generalized linear models Part II

Radiation risk estimation under uncertainty in exposure doses Overview of risk models realized in program package EPICURE Estimation of radiation risk under classical or Berkson multiplicative error in exposure doses Radiation risk estimation for persons exposed by radioiodine as a result of the Chernobyl accident Elements of estimating equations theory Consistency of efficient methods Efficient SIMEX method as a combination of the SIMEX method and the corrected score method Application of regression calibration in the model with additive error in exposure doses z/OS V1.11 DFSMS Release Guide Routledge Overview of the interface of language and the law, illustrated with authentic data and contemporary case studies. Topics include collection of evidence, discourse, courtroom interaction, legal language, comprehension and forensic phonetics.

Each release of data facility storage management subsystem (DFSMS) builds upon the previous version to provide enhanced storage management, data access, device support, program management, and distributed data access for the z/OS® platform in a system-managed storage environment. This IBM® Redbooks® publication provides a summary of the functions and enhancements in z/OS V1R11 DFSMS. It provides you with the information that you need to understand and evaluate the content of this DFSMS release, along with practical implementation hints and tips. Also included are enhancements that were

made available through an enabling PTF that has been integrated into z/OS DFSMS V1R11. This book was written for storage professionals and system programmers who have experience with the components of DFSMS. It provides sufficient information so that you can start prioritizing the implementation of new functions and evaluating their applicability in your DFSMS environment.

Making Health Policy MDPI

This book was written to provide a professional resource which describes comprehensively what a professional counselor is, what a professional counselor does, and where and when a professional counselor works. The first chapter presents a perspective on professional counseling and differentiates between professional

counselors and other mental health specialists. Assumptions about professional counselors are discussed and the professional counselor is seen as a practitioner-scientist. The evolution of the counseling profession is reviewed in chapter 2 and the present-day counseling profession is described. The third chapter focuses on the professional preparation of counselors, defining issues in counselor preparation, and examining standards of preparation and accreditation. Chapter 4 reviews various theoretical models of counseling (psychoanalytic, client/person-centered, behavioral, cognitive, and affective models) and looks at counseling theory and practice. Chapters 5, 6, and 7 examine assessment and measurement, career development and counseling, and consultation, respectively. Chapter 8 focuses on research in professional counseling,

providing suggestions for research designs, selection of variables and subjects, and statistical analyses. Chapter 9 examines trends in professional counseling, describing trends in both settings where professional counselors work and clientele with whom counselors work.

Professionalism in counseling is the focus of chapter 10, which is followed by the Code of Ethics adapted from the Ethical Standards of the American Personnel and Guidance Association. (NB)

This volume provides in-depth

examinations of a variety of individual, social, and environmental factors that contribute to the success of expatriate employees. Using data from numerous large-scale studies from both the public and private sectors, this volume provides valuable insights into expatriate success with implications for both theoretical understanding and practical management. The authors explore factors that influence employees to pursue expatriation, contribute to expatriate adjustment and satisfaction, and ultimately drive expatriate performance, well-being, and success. The chapters in this book consider the role of sociodemographic characteristics, personality and individual differences, training and preparation, and social and organizational support in contributing to each of these outcomes. Using findings from diverse countries and sectors and data-focused analytic techniques, this volume provides novel insights into factors promoting expatriate success.

Air and Gas Drilling Manual, Fourth Edition: Applications for Oil, Gas and Geothermal Fluid Recovery Wells, and Specialized Construction Boreholes, and the History and Advent of the Directional DTH delivers the fundamentals and current methods needed for engineers and managers engaged in drilling operations. Packed with updates, this reference discusses the engineering modelling and planning aspects of underbalanced drilling, the impacts of technological advances in high angle and horizontal drilling, and the importance of new production from shale. In addition, an in-depth

discussion is included on well control model planning considerations for completions, along with detailed calculation examples using Mathcad. This book will update the petroleum and drilling engineer with a much-needed reference to stay on top of drilling methods and new applications in today's operations. Provides key drilling concepts and applications, including unconventional activity and directional well by gas drilling Updated with new information and data on managed pressure drilling, foam drilling, and aerated fluid drilling Includes practical appendices with Mathcad equation solutions

The Restructured Extended Executor (REXX) language is a procedural language that allows you to write programs and algorithms in a clear and structural way. It is an interpreted and compiled

language, and you do not have to compile a REXX command list before executing it. With IBM z/OS V1.9, you can harness the versatility of REXX to interface and interact with the power of SDSF. A new function called REXX with SDSF is available that provides access to SDSF functions through the use of the REXX programming language. This REXX support provides a simple and powerful alternative to using SDSF batch. This IBM Redbooks publication describes the new support and provides sample REXX execs that exploit the new function and that perform real-world tasks related to operations, systems programming, system administration, and automation. This book complements the SDSF documentation, which is primarily reference information. The audience for this book includes operations support, system programmers, automation support, and anyone with a desire to access SDSF using a REXX interface.

This publication forms a narrative of how health care was organized, practised, and supported within

Canada's fighting services from the first day of peace following World War II to the military operations of the end of the century. It focusses not only on what medical practitioners did, but on how they were recruited, trained, deployed, and supplied. Topics covered include operations in the Korean War & peacekeeping; medical research; personnel issues; infrastructure; logistics; treatment of casualties; field hospitals; search & rescue operations; and treating victims of natural disasters. Includes index.

Designed to help students understand the multiple levels at which human populations respond to their surroundings, this essential text offers the most complete discussion of environmental, physiological, behavioral, and cultural adaptive strategies available. Among the unique features that make Human Adaptability outstanding as both a textbook for students and a reference book for professionals are a complete discussion of the development of ecological anthropology and relevant research methods; the use of an ecosystem approach with emphasis on arctic, high altitude, arid land, grassland, tropical rain forest, and urban environments; an extensive and updated bibliography on ecological anthropology; and a comprehensive glossary of technical terms. - There is enhanced emphasis throughout

on the role of gender in human adaptability research and on global environmental change as it affects particular ecosystems. - Students are guided to websites that provide access to relevant material, complement the text's coverage of biomes, and suggest ways to become active in environmental issues. - The fourth edition includes updated material on climate change and environmental policy. This book is essential reading for students undertaking courses in environmental anthropology and human ecology.

Virtual Storage Access Method (VSAM) is one of the access methods used to process data. Many of us have used VSAM and work with VSAM data sets daily, but exactly how it works and why we use it instead of another access method is a mystery. This book helps to demystify VSAM and gives you the information necessary to

understand, evaluate, and use VSAM properly. This book also builds upon the subject of Record Level Sharing and DFSMStvs. It clarifies VSAM functions for application programmers who work with VSAM. The practical, straightforward approach should dispel much of the complexity associated with VSAM.

Wherever possible an example is used to reinforce a description of a VSAM function. This IBM® Redbooks® publication is intended as a supplement to existing product manuals. It is intended to be used as an initial point of reference for VSAM functions.

Tallinn Manual 2.0 expands on the highly influential first edition by extending its coverage of the international law governing cyber operations to peacetime

legal regimes. The product of available on IBM zEnterprise® a three-year follow-on project by a new group of twenty renowned international law experts, it addresses such topics as sovereignty, state responsibility, human rights, and the law of air, space, and the sea. Tallinn Manual 2.0 identifies 154 'black letter' rules governing cyber operations and provides extensive commentary on each rule. Although Tallinn Manual 2.0 represents the views of the experts in their personal capacity, the project benefitted from the unofficial input of many states and over fifty peer reviewers.

This IBM® Redbooks® publication will help you to install, tailor, and configure the Open Systems Adapter (OSA) features that are

servers. It focuses on the hardware installation and the software definitions that are necessary to provide connectivity to LAN environments. This information will help you with planning and system setup. This book also includes helpful utilities and commands for monitoring and managing the OSA features. This information will be helpful to systems engineers, network administrators, and system programmers who plan for and install OSA features. The reader is expected to have a good understanding of IBM System z® hardware, Hardware Configuration Definition (HCD) or the input/output configuration program (IOCP), Open Systems Adapter Support Facility (OSA/SF), Systems Network Architecture/Advanced Peer-to-Peer Networking

(SNA/APPN), and TCP/IP
protocol.
