by 2020. The Department estimates that it has increased its spending on diabetes services from £0.9 billion in 2006 - 2007 to £1.3 billion in 2009-10. The NAO considers these figures to be a substantial underestimate, and estimates that NHS spending on diabetes services in 2009-10 was at least £3.9 billion, or around four per cent of the NHS budget. The Department's data show that only half of people with diabetes received the recommended standards of care in 2009-10, even though the proportion has increased from 36 per cent in 2006-07. The standards originally set in 2001, state that people with diabetes should receive nine basic care processes each year but no primary care trust achieved the aim of delivering all nine basic care processes to all people, with the highest trust scoring 69 per cent and the lowest just 6 per cent. Furthermore,

fewer than one in five people with diabetes are achieving recommended standards for controlling glucose, blood pressure and cholesterol levels. As well as diminishing quality of life, diabetic complications place a significant burden on the NHS. The Department also estimates that up to 24,000 people die each year from avoidable causes related to their diabetes. There is significant variation in the quality of care received by people with diabetes which cannot be satisfactorily explained. Through better management of people with diabetes, the NHS could save £170 million a year.

"Explore[s] how archives are using the web to reach and interact with users, old and new, as well as to serve their own management needs. Thirteen case studies illustrate archival

practitioners' own experiences in creating blogs, wikis, and interactive websites, and contributing to sites such as Flickr, YouTube, Wikipedia, and Second Life ... In addition, a series of short essays present the viewpoints of some of the primary users of archives -- historians, educators, students, and genealogists. The volume concludes with a group of reflections on the larger implications of social media for archives"--P. [4] of cover.

Few scholars have been as influential in finance, both as an academic field and an industry, as Eugene Fama. Since writing his groundbreaking 1970 essay on efficient capital markets, Fama has written over 100 papers and books that have been cited hundreds of thousands of times. Yet there is no one collection where one can easily find his best work in all fields. "The Fama Portfolio" will be

an outstanding and unprecedented resource in a field that still concentrates mainly on questions stemming from Fama's work: Is the finance industry too large or too small? Why do people continue to pay active managers so much? What accounts for the monstrous amount of trading? Do high-speed traders help or hurt? The ideas, facts, and empirical methods in Fama's work continue to guide these investigations. "The Fama Portfolio" will be a historic and long-lasting collection of some of the finest work ever produced in finance."

A new computer code was developed to solve the two-dimensional or axisymmetric, Reynolds averaged, unsteady compressible Navier-Stokes equations in strong conservation law form. The thin-layer or Euler equations may also be solved.

Turbulence is modeled using an algebraic eddy viscosity model. The objective was to develop a code for aerospace applications that is easy to use and easy to modify. Code readability, modularity, and documentation were emphasized. The equations are written in nonorthogonal body-fitted coordinates, and solved by marching in time using a fully-coupled alternating direction-implicit procedure with generalized first- or second-order time differencing. All terms are linearized using second-order Taylor series. The boundary conditions are treated implicitly, and may be steady, unsteady, or spatially periodic. Simple Cartesian or polar grids may be generated internally by the program. More complex geometries require an externally generated computational coordinate system. The documentation is divided into three volumes. Volume 1 is the Analysis Description, and describes in detail the

governing equations, the turbulence model, the linearization of the equations and boundary conditions, the time and space differencing formulas, the ADI solution procedure, and the artificial viscosity models. "Wow... So many twists and turns that keep you guessing... Captures your attention and doesn't let go till the end." TB Honest, ????? A deadly attack on the Vatican City reveals an even deadlier conspiracy within its walls... When Marco Venetti left the military, he thought his days of violence were behind him. But now a beautiful woman is begging for his help. Her daughter has been kidnapped to force her to smuggle a gang of killers into the country. If she disobeys, her family will die. Determined to protect her, Marco goes on the hunt. But after a terrifying battle on a rocky island off the Italian coast, he finds a map on one of the men's bodies that reveals their ultimate goal: a deadly terrorist attack on the Vatican City itself. Marco races to prevent a bloodbath in the heart of Rome, but the terrorists are more dangerous than he knew. A nuclear weapon is missing, and the CIA, Russians and Israelis are too busy fighting to prevent it falling into the wrong hands. The only person Marco can

trust is himself. He must track down and kill his enemy... but the Vatican is home to secrets and conspiracies, and soon Marco realises he may not even know who the real enemy is. Can he uncover a traitor before time runs out? For fans of Joel C. Rosenberg, Tom Clancy and Steven Konkoly, *The Vatican Conspiracy* is a non-stop explosive thriller of betrayal, revenge and world-shaking conspiracy. 'De Bernieres is a singular, cherishable voice' Mail on Sunday From the master of historical fiction, this book follows an unforgettable family after the Second World War. Some bonds are hard to break... Daniel Pitt was an RAF fighter in the First World War and an espionage agent for the SOE in the Second. Now the conflicts he faces are closer to home. Daniel's

marriage has fractured beyond repair and Daniel's relationship with his son, Bertie, has been a failure since Bertie was a small boy. But after his brother Archie's death, Daniel is keen for new perspectives. He first travels to Peshawar to bury Archie in the place he loved best, and then finds himself in Canada, avoiding his family and friends back in England. Daniel and Bertie's different experiences of war, although devastating, also bring with them the opportunity for the two to reconnect. If only they can find a way to move on from the past...
