A concise guide to the fundamentals of child psychopathology, complete with the latest developments Essentials of Child and Adolescent Psychopathology, Second Edition provides a concise, accessible overview of the major theories, assessment practices, and key issues. This updated Second Edition describes the significant changes in the way DSM™-5 conceptualizes disorders in children and adolescents, and includes a new chapter on child abuse, child maltreatment, and self-injurious behavior. Using practical case examples to illustrate key points, the book addresses specific disorders and problems prevalent among this age group—including anxiety, mood disorders, and traumatic stress. Each chapter features reader-friendly elements like Rapid Reference, Caution, and Don't Forget boxes that call out important information, facilitating easy look-up and quick navigation. This invaluable resource fills the need for an overview of the most current issues and changes in the field, allowing readers to: Review the development, theories, and influences in child and adolescent psychopathology Understand neurodevelopmental disorders including intellectual and developmental disabilities, ADHD, and specific learning disabilities or disorders Compare and contrast the manifestations of internalized vs. externalized disorders Examine later-onset disorders and special topics including eating disorders, substance abuse, and trauma-related disorders The book also includes appendices on ethical conduct, assessment instruments, and IDEA 2004, providing readers the guidance and tools that can help increase positive outcomes. Whether used as a secondary text or as a professional reference, Essentials of Child and Adolescent Psychopathology, Second Edition provides an authoritative briefing on this evolving area of practice.

This work examines customs and habits such as crayfish parties, Christmas celebrations, and graduation rituals. The focus is not on the traditions as such, instead they provide a starting point for analyses of how the experiences of everyday life are manifested in a visible cultural garb. The text shows how many rituals serve to release people from the bonds of tradition, usually by creating a special cultural arena. Yet it also examines the ways in which habits and customs tacitly coerce thoughts, sometimes drawing attention to fundamental social and moral values but just as often acting as impediments to reflection. The contributors try to see

how some features of everyday cultural identity can be easily replaced, while others may persist tenaciously.

Decentralization is widely discussed in the literature. Katharina Mewes gives an introduction to the theoretical and practical dimensions of decentralization in an accessible and systematic way. On the example of the reform process for the Yemeni Urban Water Supply and Sanitation (UWSS) sector, she links the theoretical, conceptual, and methodological aspects of decentralization to empiric problems. This book is valuable reading for researchers and students of political science, environmental and water studies, development researchers and regional experts.

A Deal with the Devil Charisma Media

One of the most striking features of contemporary industrial economies is their ability to offer an ever-expanding and improving range of products. Personal computers, tiny pacemakers, digital watches, and VCRs simply did not exist, and were not even dreamt of, only a few decades ago. Such product innovations play an increasingly important role in modern economic growth, and it is therefore imperative that economists come to grips with them, just as they have done with traditional economic phenomena. In this skillfully crafted and imaginative study, Manuel Trajtenberg develops the tools to quantify and analyze the notion of product innovation. He argues persuasively that the magnitude of an innovation should be equated with the social benefits that it generates. Drawing from the "characteristics approach" to demand theory and the econometrics of discrete choice, he presents an ingenious method to estimate the benefits from product innovations that accrue to the consumer over time. His method centers on consumer preferences for different product attributes -such as speed and size of memory in computers-and then uses those preferences to evaluate the changes in attributes. Trajtenberg applies his approach to the study of one of the most remarkable innovations in medical technology--Computed Tomography (CT) scanners. He assembled for that purpose an impressive set of data on every aspect of the new technology, from qualities and prices, patents and research, to details on virtually every sale in

the United States during the decade following the introduction of CT in 1973. This close-up view of an innovation, quite rare in economic literature, offers valuable insights on the nature of the innovative process, the interaction between innovation and diffusion, the effects of uncertainty about quality, and the implications of changing preferences.

This IBM Redbooks publication describes how DFSMSStvs works, how and when you might use it, and what you need to consider in your plans. This book should be of interest to you if you want to understand how you can increase the service hours of a CICS/VSAM system by reducing or eliminating the batch window, or if you want to run multiple concurrent batch jobs updating common VSAM data sets. This book is written for readers who have some knowledge of CICS, VSAM, and VSAM Record Level Sharing, and who wish to understand more about DFSMSStvs. The book reviews how existing products work. It introduces DFSMSStvs, offering more detail on how it works, how you might migrate to it, and how you can change your applications or write new applications to exploit it. This is a companion volume to the DFSMSStvs Application Migration Guide, SG24-6972, which contains practical examples of migrating programs to run in a DFSMSStvs environment, and the DFSMSStvs Presentation Guide, SG24-6973, which contains an overview presentation of DFSMSStvs.

Once Lost (A Riley Paige Mystery—Book 10)John Wiley & Sons

Although fiction writers must concern themselves with "big picture" issues such as plot, theme, and character development, much of the day-to-day work of writing involves finding answers to seemingly minor questions: How should I describe the exterior of a house? How can I construct the voice of a historical narrator with authenticity? How should I depict a physically atypical character? Few books on the market address the problems and opportunities present in these and other questions, yet they are the ones that most writers grapple with on a daily basis. *Danger on the Page: A Fiction Writer's Guide to Sex, Violence, Dead Narrators, and Other Challenges* identifies and explores some of the more common and intractable situational challenges of fiction writing, with chapters grouped into the general subject areas such as scenes, characters, points of view, and settings. Shawver delves into the pitfalls and opportunities of writing about sex, violence, sports, and love; he examines writing from the perspective of a different race, gender, or species; he interrogates conventional beliefs about the use of brand names, the description of architecture, and the portrayal of nature. Throughout, he gives dozens of examples from both literary and commercial fiction so readers can borrow (or reject) other writers' techniques and explore the myriad challenges of fiction writing on their own. A lively and witty approach to a diverse range of specific writing issues, Shawver's book will appeal especially to intermediate-level writers seeking to bring their craft to the next level.

In Culture, Relevance, and Schooling: Exploring Uncommon Ground, Lisa Scherff, Karen Spector, and the contributing authors conceive of culturally relevant and critically minded pedagogies in terms of opening up new spatial, discursive, and/or embodied learning terrains. Readers will traverse multiple landscapes and look into a variety of spaces where attempts to tear down or build up pedagogical borders based upon socially-just design are underway. In disciplines ranging from elementary science, to high school English, to college kinesiology, the contributors to this volume describe their attempts to remake schooling in ways that bring hope and dignity to their participants.

Economic Analysis of Product Innovation Corwin Press

This book covers applications of computational techniques to biological problems. These techniques are based by an ever-growing number of researchers with different scientific backgrounds - biologists, chemists, and physicists. The rapid development of molecular biology in recent years has been mirrored by the rapid development of computer hardware and software. This has resulted in the development of sophisticated computational techniques and a wide range of computer simulations involving such methods. Among the areas where progress has been profound is in the modeling of DNA structure and function, the understanding at a molecular level of the role of solvents in biological phenomena, the calculation of the properties of molecular associations in aqueous solutions, computationally assisted drug design, the prediction of protein structure, and protein - DNA recognition, to mention just a few examples. This volume comprises a balanced blend of contributions covering such topics. They reveal the details of computational approaches designed for biomolecules and provide extensive illustrations of current applications of modern techniques. A broad group of readers ranging from beginning graduate students to molecular biology professions should be able to find useful contributions in this selection of reviews.

Corporate social responsibility has gained substantial traction in recent decades but many still struggle with conveying the importance of integrating ethics and environmental and social values within the demands of a business world understandably concerned with making profit. First published in 2009 as 'Do the Right Thing', The Practical Guide to Corporate Social Responsibility guides you through the basics, teaching how to recognise CSR benefits and put principles into practice in a business-focussed way. This new edition helps readers get to grips with improving their organisation's environmental management, sustainability, health and safety and trading ethics with straightforward guidance and tips. A new 'Do The Right Thing' Model assists organisations with identifying risks and frames corporate social responsibility in a business context accessible to all. Features include: An updated Do the Right Thing Model aligned to the new ISO high level structure for management system standards 20 global case studies to demonstrate how the model can impact performance A corporate social responsibility policy template for your organisation's use Helpful 'Test your thinking' exercises to check your understanding and stretch your working knowledge 100 practical actions for you to start implementing today This is an essential introduction to the complex areas of corporate social responsibility that affect health and safety practitioners, environmental managers, human resources personnel and those working with quality and business assurance. It will also be critical reading for those looking to understand how CSR fits into the new high level structure of ISO 9001, ISO 14001 and ISO 45001.

Free Radicals in Biology, Volume V covers the mechanisms for the generation of free radicals. This volume contains eight chapters that discuss the biology and chemistry of oxy-radicals in mitochondria and the radical-mediated metabolism of xenobiotics. The opening chapter describes the mechanisms of free radical production in enzymatically promoted lipid peroxidation, generally in microsomes or microsomal lipids. The subsequent chapters explore the biochemistry and biology of plant and animal lipoxygenases; the production of superoxide and hydrogen peroxide in mitochondria; and the biological role of these species in mitochondria and related systems. The discussions then shift to the effects of superoxide production in white blood cells, with an emphasis on an evaluation of the oxygen-dependent reactions of the important phagocytic cells, the monocytes, and the polymorphonuclear leukocytes. This volume further covers the formation and the role of oxy-radicals in the red blood cell, which is a very useful system for studying the protection of biological tissue against radical-mediated damage. A chapter presents a comprehensive review of the production of free radicals during the metabolism of xenobiotics. The last chapters provide an overview of the enzymology, biological functions, and free radical chemistry of glutathione peroxidase. These chapters also examine a number of gerontological principles and the effect of antioxidants in aging. Chemists, biologists, and physicists will find this book of great value.
