People have dreamed of returning to their youth to correct their errors and naïvet é . Dr. Frank Dodd acquired that chance but for a different reason. He and his wife, Dr. Beverly Dodd, are retired professors from a small north Florida College. They had just started enjoying retirement when they found Beverly had inoperable cancer and would soon die. Frank bemoaned the fact he hadn ’ t insisted on Beverly seeing a doctor a year earlier when she could have been cured. While in a chat room two fellow scientists heard Frank discuss his regrets at not getting his wife help in time and how he wished he could go back in time to court and marry her again, only this time get her to the doctors in time to be cured. The two scientists have been doing experiments in time travel and knowledge transfer between brains. Frank agreed to be used as a guinea pig to be sent back to the time of his youth and to implant his knowledge into himself as a boy. He arrives in 1941 with computers and other modern equipment to sell to the government and industry and invest the proceeds for the benefit of all three while living his life over, striving to have the same experiences and doing the same things from his former youth, but this time avoiding the mistakes of his former life. The dilemma occurs when he falls in love with a woman he meets in this new life. Should he remain single and wait for 15 years to meet and court his wife again or marry the one he falls in love with during his present time.

An award-winning scientist offers his unorthodox approach to childrearing: “ Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions ” (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you ’ re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley ’ s sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You ’ ll be laughing and learning at the same time.
