This is the origin story of technology super heroes: the creators and founders of ARM, the company that is responsible for the processors found inside 95% of the world's mobile devices today. This is also the evolution story of how three companies - Apple, Samsung, and Qualcomm - put ARM technology in the hands of billions of people through smartphones, tablets, music players, and more. It was

anything but a straight line from idea to success for ARM. The story starts with the triumph of BBC Micro engineers Steve Furber and Sophie Wilson, who make the audacious decision to design their own microprocessor - and it works the first time. The question becomes, how to sell it? Part I follows ARM as its founders launch their own company, select a new leader, a new strategy, and find themselves partnered with Apple, TI, Nokia, and other companies just as digital technology starts to unleash mobile devices. ARM grows rapidly, even as other semiconductor firms struggle in the dot com meltdown, and establishes itself as a standard for embedded RISC processors. Apple aficionados will find the opening of Part II of interest the moment Steve Jobs returns and changes the direction toward fulfilling consumer dreams. Samsung devotees will see how that firm evolved from its earliest days in consumer electronics and semiconductors through a philosophical shift to innovation. Qualcomm followers will learn much of their history as it plays out from satellite communications to development of a mobile phone standard and emergence as a leading fabless semiconductor company. If ARM could be summarized in one word, it would be "collaboration." Throughout this story, from Foreword to Epilogue, efforts to develop an ecosystem are highlighted. Familiar

names such as Google, Intel, Mediatek, Microsoft, Motorola, TSMC, and others are interwoven throughout. The evolution of ARM's first 25 years as a company wraps up with a shift to its next strategy: the Internet of Things, the ultimate connector for people and devices. Research for this story is extensive, simplifying a complex mobile industry timeline and uncovering critical points where ARM and other companies made fateful and sometimes surprising decisions. Rare photos, summary diagrams and tables, and unique perspectives from insiders add insight to this important telling of technology history.

This text explores the history and development of the many technologies that have led to how we treat contemporary urologic problems. From the development of the cystoscope, the advances in laparoscopy, the birth of the field of endourology, to the era of robotics today, urologists have pushed the envelope in technologic innovation. The editors highlight the development of the cystoscope and the early tools used to treat ureteral stones, the development of ureteroscopy, and the applications of lasers and shock wave lithotripsy in the treatment of urolithiasis. Furthermore, they explore the history of minimally invasive treatments in urologic oncology from the story behind the first laparoscopic nephrectomy, the application of hand-assisted technology to the development of robotics and percutaneous treatment approaches (radiofrequency ablation and cryoablation). As the field of urology continues to evolve, urologists will continue to look to the future with the recent applications of histotripsy and regenerative medicine. This text chronicles the creativity, innovation and discovery of the developments of the instruments that allow to practice urology

today, as well as glimpse what the future of urology holds.

The Maya metropolis of Tikal was once one of the greatest cities in the world, its skyline dominated by huge temple-pyramids. In ad 750 over 100,000 people lived

here, in the heart of the Guatemalan rainforest. Today Tikal is a popular site on the Maya tourist itinerary. But why did the city flourish? What does its history reveal about Maya civilization? And why did Tikal collapse? Drawing upon over 30 years of excavation and research, some of it his own, Peter D. Harrison gives a vivid account of the turbulent story of Tikal from 800 bc to the late 9th century ad. Strategically located, the city was a trade centre, an architectural pioneer and a focal point of warfare. The apogee of power and wealth was achieved during the reign of the Jaguar Claw clan, who built the Great Temples, some with tombs of treasures that hint at the richness of life of the lords of Tikal. Illustrated with photographs of artefacts and objects found at the site, remaining structures and a reconstruction of a Tikal king in full regalia, Peter D. Harrison offers a summary of what is known to date of this romantic, mysterious city and its rulers.

To metaphorize the world as a theatre has been a common procedure since antiquity, but the use of this trope became particularly prominent and pregnant in early modern times,

especially in England. Old and new applications of the “*theatrum mundi*” topos pervaded discourses, often allegorizing the deceitfulness and impermanence of this world as well as the futility of earthly strife. It was frequently woven into arguments against worldly amusements such as the stage: Commercial theatre was declared an undesirable competitor of God’s well-ordered world drama. Early modern dramatists often reacted to this development by appropriating the metaphor, and in an ingenious twist, some playwrights even appropriated its anti-theatrical impetus: Early modern theatre seemed to discover a denial of its own theatricality at its very core. Drama was found to succeed best when it staged itself as a great unmasking. To investigate the reasons and effects of these developments, the anthology examines the metaphorical uses of theatre in plays, pamphlets, epics, treatises, legal proclamations and other sources.

Mobile and wireless communications applications have a clear impact on improving the humanity wellbeing. From cell phones to wireless internet to home and office devices, most of the applications are converted from wired into wireless communication. Smart and advanced wireless communication environments represent the future technology and evolutionary development step in homes, hospitals, industrial, vehicular and transportation systems. A very appealing research area in these environments has been the wireless ad hoc, sensor and mesh networks. These networks rely on ultra low powered processing nodes that sense surrounding environment temperature, pressure, humidity, motion or chemical hazards, etc. Moreover, the radio frequency

(RF) transceiver nodes of such networks require the design of transmitter and receiver equipped with high performance building blocks including antennas, power and low noise amplifiers, mixers and voltage controlled oscillators. Nowadays, the researchers are facing several challenges to design such building blocks while complying with ultra low power consumption, small area and high performance constraints. CMOS technology represents an excellent candidate to facilitate the integration of the whole transceiver on a single chip. However, several challenges have to be tackled while designing and using nanoscale CMOS technologies and require innovative idea from researchers and circuits designers. While major researchers and applications have been focusing on RF wireless communication, optical wireless communication based system has started to draw some attention from researchers for a terrestrial system as well as for aerial and satellite terminals. This renewed interest in optical wireless communications is driven by several advantages such as no licensing requirements policy, no RF radiation hazards, and no need to dig up roads besides its large bandwidth and low power consumption. This second part of the book, Mobile and Wireless Communications: Key Technologies and Future Applications, covers the recent development in ad hoc and sensor networks, the implementation of state of the art of wireless transceivers building blocks and recent development on optical wireless communication systems. We hope that this book will be useful for students, researchers and practitioners in their research studies.
