HEAT, CHEMICAL KINETICS and ELECTROCHEMISTRY (colored) Chemistry is an interesting and fundamental branch of science because it gives us the chance to explain the secrets of nature. What is water? What do we use in our cars as fuel? What is aspirin? What are perfumes made of? These kinds of questions and their answers are all part of the world of chemistry. Chemists work every day to produce new compounds to make our lives easier with the help of this basic knowledge. All industries depend upon chemical substances, including petroleum, pharmaceuticals, garment, aircraft, steel, and electronics industries, etc. This textbook helps students to understand nature. However, one does not need to be a chemist or

scientist to grasp the simplicity within the complexity around us. The aim was to write a modern, up-to-date book where students and teachers can get concise information about basic topics in chemistry. The textbook is specially designed to introduce basic information about heat change in chemical reactions, rate of chemical reactions, equilibrium in chemical reactions, acids and bases, and electrochemical cells. Throughout the book, different figures, colorful tables, important reactions, funny cartoons, interesting extras, and reading passages are used to help explain ideas. We hope that after studying this book, you will find chemistry in every part of your life. I am often asked the question, "Should I get my PE license or not?" Unfortunately the answer is, Probably. First let's take a look at the licensing process and understand why it exists, then take a look at extreme situations for an attempt at a yes/no answer, and finally consider the exams. All 50 have a constitutionally defined responsibility to protect the public. From an engineering point of view, as well as many other professions, this responsibility is met by the process of licensure and in our case the Professional Engineer License. Though there are different experience requirements for different states, the meaning of the license is common. The licensee demonstrates

academic competency in the Fundamentals of Engineering by examination (Principles and Practices at PE time). The licensee demonstrates qualifying work experience (at PE time). The licensee ascribes to the Code of Ethics of the NSPE, and to the laws of the state of registration. Having presented these qualities the licensee is certified as an Intern Engineer, and the state involved has fulfilled its constitutionally defined responsibility to protect the public.

If a Writer would know how to behave himself with relation to Posterity; let him consider in old Books, what he finds, that he is glad to know; and what Omissions he most laments. Jonathan Swift This book emerges from a long story of teaching. I taught chemical engineering thermodynamics for about ten years at the University of Naples in the 1960s, and I still remember the awkwardness that I felt about any textbook I chose to consider-all of them seemed to be vague at best, and the standard of logical rigor seemed immensely inferior to what I could find in books on such other of the students in my first class subjects as calculus and fluid mechanics. One (who is now Prof. F. Gioia of the University of Naples) once asked me a question which I have used here as Example 4. 2-more than 20 years have gone by, and I am still waiting for a more intelligent question from one of my students. At the time, that question compelled me to answer in a way I didn't like, namely "I'll think about it, and I hope I'll have the answer by the next time we meet. " I didn't have it that soon, though I did manage to have it before the end of the course.
