The #1 NEW YORK TIMES Bestseller The basis for the PBS Ken Burns Documentary The Gene: An Intimate History Now includes an excerpt from Siddhartha Mukherjee's new book Song of the Cell! From the Pulitzer Prize-winning author of The Emperor of All Maladies—a fascinating history of the gene and “a magisterial account of how human minds have laboriously, ingeniously picked apart what makes us tick” (Elle). “Sid Mukherjee has the uncanny ability to bring together science, history, and the future in a way that is understandable and riveting, guiding us through both time and the mystery of life itself.” —Ken Burns

“Dr. Siddhartha Mukherjee dazzled readers with his Pulitzer Prize-winning The Emperor of All Maladies in 2010. That achievement was evidently just a warm-up for his virtuoso performance in The Gene: An Intimate

History, in which he braids science, history, and memoir into an epic with all the range and biblical thunder of Paradise Lost” (The New York Times). In this biography Mukherjee brings to life the quest to understand human heredity and its surprising influence on our lives, personalities, identities, fates, and choices. “Mukherjee expresses abstract intellectual ideas through emotional stories...[and] swaddles his medical rigor with rhapsodic tenderness, surprising vulnerability, and occasional flashes of pure poetry” (The Washington Post).

Throughout, the story of Mukherjee's own family—with its tragic and bewildering history of mental illness—reminds us of the questions that hang over our ability to translate the science of genetics from the laboratory to the real world. In riveting and dramatic prose, he describes the centuries of research and experimentation—from Aristotle and Pythagoras to Mendel and Darwin, from Boveri and Morgan to Crick, Watson and Franklin, all the way through the revolutionary twenty-first century innovators who mapped the human genome. “A fascinating and often sobering history of how humans came to understand the roles of genes in making us who we are—and what our manipulation of those genes might mean for our future” (Milwaukee Journal-Sentinel), The Gene is the revelatory and magisterial history of a scientific idea coming to life, the most crucial science of our time, intimately explained by a master. “The Gene is a book we all should read” (USA TODAY).

The past few years have witnessed a revolution in our ability to obtain DNA from ancient humans. This important new data has added to our knowledge from archaeology and anthropology, helped resolve long-existing controversies, challenged long-held views, and thrown up remarkable surprises. The emerging picture is one of many waves of ancient human

migrations, so that all populations living today are mixes of ancient ones, and often carry a genetic component from archaic humans. David Reich, whose team has been at the forefront of these discoveries, explains what genetics is telling us about ourselves and our complex and often surprising ancestry. Gone are old ideas of any kind of racial 'purity.' Instead, we are finding a rich variety of mixtures. Reich describes the cutting-edge findings from the past few years, and also considers the sensitivities involved in tracing ancestry, with science sometimes jostling with politics and tradition. He brings an important wider message: that we should recognize that every one of us is the result of a long history of migration and intermixing of ancient peoples, which we carry as ghosts in our DNA. What will we discover next?

In The Selfish Gene, Richard Dawkins crystallized the gene's eye view of evolution developed by W.D. Hamilton and others. The book provoked widespread and heated debate. Written in part as a response, The Extended Phenotype gave a deeper clarification of the central concept of the gene as the unit of selection; but it did much more besides. In it, Dawkins extended the gene's eye view to argue that the genes that sit within an organism have an influence that reaches out beyond the visible traits in that body - the phenotype - to the wider environment, which can include other individuals. So, for instance, the genes of the beaver drive it to gather twigs to produce the substantial physical structure of a dam; and the genes of the cuckoo chick produce effects that manipulate the behaviour of the host bird, making it nurture the intruder as one of

its own. This notion of the extended phenotype has proved to be highly influential in the way we understand evolution and the natural world. It represents a key scientific contribution to evolutionary biology, and it continues to play an important role in research in the life sciences. The *Extended Phenotype* is a conceptually deep book that forms important reading for biologists and students. But Dawkins' clear exposition is accessible to all who are prepared to put in a little effort. Oxford Landmark Science books are 'must-read' classics of modern science writing which have crystallized big ideas, and shaped the way we think.

BY THE WINNER OF THE 2020 NOBEL PRIZE IN CHEMISTRY | Finalist for the Los Angeles Times Book Prize "A powerful mix of science and ethics . . . This book is required reading for every concerned citizen—the material it covers should be discussed in schools, colleges, and universities throughout the country."—New York Review of Books Not since the atomic bomb has a technology so alarmed its inventors that they warned the world about its use. That is, until 2015, when biologist Jennifer Doudna called for a worldwide moratorium on the use of the gene-editing tool CRISPR—a revolutionary new technology that she helped create—to make heritable changes in human embryos. The cheapest, simplest, most effective way of manipulating DNA ever known, CRISPR may well give us the cure to HIV, genetic diseases, and some cancers. Yet even the tiniest changes to DNA could have myriad, unforeseeable consequences, to say nothing of the ethical and societal repercussions of intentionally mutating embryos to create "better" humans. Writing with fellow researcher Sam Sternberg, Doudna—who has since won the Nobel Prize for her CRISPR research—shares the thrilling story of her discovery and describes the enormous responsibility that comes with the power to rewrite the code of life. "The future is in our hands as never before, and this book explains the stakes like no other." —George Lucas "An invaluable account . . . We owe Doudna several times over." —Guardian

The Code Breaker Forge Books

Our world is alive with fascinating new ideas, discoveries, and technologies. But for Christians this can also present problems—especially when the values of postmodernism and secular university

life conflict with basic Christian principles. What should Christians do when their beliefs come under attack in the classroom or the public square? *Loving God with All Your Mind* shows us that the answer is neither wholesale rejection of intellectual life and culture, nor blind acceptance of it. The answer lies in understanding that Jesus is Lord of all of life and that everything in life must be carefully viewed in the light of what Christ's lordship means. Gene Edward Veith unfolds a dazzling critique of the postmodern intellectual world and culture. He affirms the part that is good and true, but he also shows crucial weaknesses that have such a hold over contemporary thought. This book shows Christians how to survive and flourish in a postmodern world while affirming the truth of the Christian faith.

Andre Roussimoff is known as both the lovable giant in *The Princess Bride* and a heroic pro-wrestling figure. He was a normal guy who'd been dealt an extraordinary hand in life. At his peak, he weighed 500 pounds and stood nearly seven and a half feet tall. But the huge stature that made his fame also signed his death warrant. Box Brown brings his great talents as a cartoonist and biographer to this phenomenal new graphic novel. Drawing from historical records about Andre's life as well as a wealth of anecdotes from his colleagues in the wrestling world, including Hulk Hogan, and his film co-stars (Billy Crystal, Robin Wright, Mandy Patinkin, etc), Brown has created in *Andre the Giant*, the first substantive biography of one of the twentieth century's most recognizable figures.

Alden Dennis Weer was born at the beginning of the twentieth century in a Midwestern town and this is his melancholy and sometimes amiable memoir told as he apparently lives out his last years in the same town, an embittered old man. The tales he tells of his childhood and later reveal that Weer, an ordinary and successful local businessman, has been around more than his fair share of death, and there are hints that this may not be coincidental. But, more than that, Weer, it seems, has the ability to reshape reality, to obliterate time, even to transcend death itself...

The New York Times "Immensely readable, often hilarious...Hands-down one of the best books I've read in years. I loved it." —Dina Temple-Raston, *The Washington Post* From the bestselling author of *A Primate's Memoir* and the forthcoming *Determined: A Science of Life Without Free Will* comes a landmark, genre-defining examination of human behavior and an answer to the question: Why do we do the things we do? *Behave* is one of the most dazzling tours d'horizon of the science of human behavior ever attempted. Moving across a range of disciplines, Sapolsky—a neuroscientist and primatologist—uncovers the hidden story of our actions. Undertaking some of our thorniest questions relating to tribalism and xenophobia, hierarchy and competition, and war and peace, *Behave* is a towering achievement—a majestic synthesis of cutting-edge research and a heroic exploration of why we ultimately do the things we do . . . for good and for ill.

Undaunted Hope in a Post-Christian World We live in a post-Christian world. Contemporary thought—claiming to be "progressive" and "liberating"—attempts to place human beings in God's role as creator, lawgiver, and savior. But these post-Christian ways of thinking and living are running into dead ends and fatal contradictions. This timely book demonstrates how the Christian worldview stands firm in a world dedicated to constructing its own knowledge, morality, and truth. Gene Edward Veith Jr. points out the problems with how today's culture views humanity, God, and even reality itself. He offers hope-filled, practical ways believers can live out their faith in a secularist society as a way to recover reality, rebuild culture, and revive faith.

PBS's *The Great American Read* named it one of America's best-loved novels. *A Separate Peace* has been a bestseller in the United States for nearly thirty years, and it is ageless in its depiction of

youth during a time when the entire country was losing its innocence to World War II. *A Separate Peace* is a horrific and brilliant fable about the dark side of adolescence set at a boys' boarding school in New England during the early years of World War II. Gene is an introverted, lonely intellectual. Phineas is a reckless athlete who is attractive and taunts others. Like the war itself, what happens between the two friends one summer robs these guys and their world of their innocence.

Many of the battles of the civil rights movement have been fought and won, but the world is still far from colorblind. Mixed marriages are increasing but still remain largely taboo. Although interracial relationships are often discussed, the focus is almost exclusively on the negative elements. Those against mixing list the negative consequences as warnings. Even those who support interracial marriage speak of the prejudice that the couple and their children sometimes face. *Breeding Between The Lines* is the first book to outline the significant genetic and physical advantages these people possess. This book combines sex, race, health and genetics in a daring new theory. Written with accessible, direct prose, anecdotes, analogies, and examples from human and animal studies, it is sure to be a subject of debate.

Here is a guidebook for those who want to learn how to recognize books that are spiritually and aesthetically good—to cultivate good literary taste. Gene Edward Veith presents basic information to help book lovers understand what they read—from the classics to the bestsellers. He explains how the major genres of literature communicate. He explores ways comedy, tragedy, realism, and fantasy can portray the Christian worldview. These discussions lead to a host of related topics—the value of fairy tales for children, the tragic and the comic sense of life, the interplay between Greek and Biblical concepts in the imagination, and the new "post-modernism" (a subject of vital importance to Christians). In the pages of this book, readers will meet writers, past and present who carry on a great literary tradition. By supporting worthy authors, Christians can exert a powerful influence on their culture.

A riveting medical mystery about a young woman's quest to uncover the truth about her likely fatal genetic disorder that opens a window onto the exploding field of genomic medicine. When Joselin Linder was in her twenties her legs suddenly started to swell. After years of misdiagnoses, doctors discovered a deadly blockage in her liver. Struggling to find an explanation for her unusual condition, Joselin compared the medical chart of

her father—who had died from a mysterious disease, ten years prior—with that of an uncle who had died under similarly strange circumstances. Delving further into the past, she discovered that her great-grandmother had displayed symptoms similar to hers before her death. Clearly, this was more than a fluke. Setting out to build a more complete picture of the illness that haunted her family, Joselin approached Dr. Christine Seidman, the head of a group of world-class genetic researchers at Harvard Medical School, for help. Dr. Seidman had been working on her family's case for twenty years and had finally confirmed that fourteen of Joselin's relatives carried something called a private mutation—meaning that they were the first known people to experience the baffling symptoms of a brand new genetic mutation. Here, Joselin tells the story of their gene: the lives it claimed and the future of genomic medicine with the potential to save those that remain. Digging into family records and medical history, conducting interviews with relatives and friends, and reflecting on her own experiences with the Harvard doctor, Joselin pieces together the lineage of this deadly gene to write a gripping and unforgettable exploration of family, history, and love. A compelling chronicle of survival and perseverance, *The Family Gene* is an important story of a young woman reckoning with her father's death, her own mortality, and her ethical obligations to herself and those closest to her.

The Gene Harper Collins

An extraordinary epic, set a million years in the future, in the time of a dying sun, when our present culture is no longer even a memory. Severian, a torturer's apprentice, is exiled from his guild after falling in love with one of his prisoners. Ordered to the distant city of Thrax, armed with his ancient executioner's sword, Terminus Est, Severian must make his way across the perilous, ruined landscape of this far-future Urth. But is his finding of the mystical gem, the Claw of the Conciliator, merely an accident, or does Fate have a grander plan for Severian the torturer . . . ? This edition contains the first two volumes of this four volume novel, *The Shadow of the Torturer* and *The Claw of the Conciliator*.

Loving God with All Your Mind Oxford University Press

When you understand it properly, the doctrine of vocation—"doing everything for God's glory"—is not a platitude or an outdated notion. This principle that we vaguely apply to our lives and our work is actually the key to Christian ethics, to influencing our culture for Christ, and to infusing our ordinary, everyday lives with the presence of God. For when we realize

that the "mundane" activities that consume most of our time are "God's hiding places," our perspective changes. Culture expert Gene Veith unpacks the biblical, Reformation teaching about the doctrine of vocation, emphasizing not what we should specifically do with our time or what careers we are called to, but what God does in and through our callings—even within the home. In each task He has given us—in our workplaces and families, our churches and society—God Himself is at work. Veith guides you to discover God's purpose and calling in those seemingly ordinary areas by providing you with a spiritual framework for thinking about such issues and for acting upon them with a changed perspective.

Science need not be dull and bogged down by jargon, as Richard Dawkins proves in this entertaining look at evolution. The themes he takes up are the concepts of altruistic and selfish behaviour; the genetical definition of selfish interest; the evolution of aggressive behaviour; kinship theory; sex ratio theory; reciprocal altruism; deceit; and the natural selection of sex differences. 'Should be read, can be read by almost anyone. It describes with great skill a new face of the theory of evolution.' W.D. Hamilton, *Science*
