This two-volume work contains over 140 papers which, together, reflect the current status of zeolite science and technology encompassing high and low silica zeolites, pillared clays, molecular sieves, microporous metallosilicates, crystalline silica polymorphs, crystalline microporous aluminophosphates and their isomorphically substituted forms. The five plenary invited lectures summarize current knowledge and address a number of topical areas such as the enumeration of theoretically possible frameworks, the use of sophisticated physical methods to unravel and characterise new molecular sieve materials, the potential of molecular sieves as catalysts for chemical intermediate and commodity synthesis and conversion, the role of zeolites in fluid catalytic cracking, and new zeolitic materials. Specific aspects of zeolite science are highlighted in the ten keynote lectures of which three are on synthesis and

modification, one on new materials, one on characterization, two on structure and theory, one on metals in zeolites, and two on catalytic topics. All the contributions in this book reflect the high quality of research being carried out throughout the zeolite community.

Microwave technology can significantly reduce sample turnaround times, enhance quality, and reduce hazardous wastes when compared to bench or automated methods. In *Microwave Techniques and Protocols*, Richard Giberson and Richard Demaree, Jr., have collected a wide range of these time-saving techniques for processing biological samples for evaluation by many different microscopic methods. Described in step-by-step detail by hands-on researchers, these readily reproducible protocols include both optimized classic methods and such state-of-the-art techniques as *in vivo* labeling, formalin fixation of fresh tissue, vacuum processing, and processing for scanning electron microscopy. Each stand-alone microwave method has been handcrafted by a researcher who regularly uses it to ensure processing success and the highest quality result. Comprehensive and time saving, *Microwave Techniques and Protocols* demonstrates for anyone processing biological samples for immunocytochemistry, decalcification, and light or electron microscopy that microwave technology is a critically important tool in all experimental and clinical research laboratories today.

Swearing off love, Leah Morgan finds no harm in one night of unbridled, mind-blowing fun. After all, what could go wrong with a single night of amazing heat and passion? Leah just never expected it to be so right. The memories of Declan James' mesmerizing gaze and searing touch still invade her every thought. And now, one night is not nearly enough—for either of them. But when Declan's past comes barreling back, neither one of them are ready for what entails. Together, they're forced to face their fears as old insecurities try to rip them apart. Can what they've created withstand what they thought they'd never be ready for?

ETAPS 2002 was the 25th instance of the European Joint Conferences on Theory and Practice of Software. ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences. This year it comprised 5 conferences (FOSSACS, FASE, ESOP, CC, TACAS), 13 satellite workshops (ACL2, AGT, CMCS, COCV, DCC, INT, LDTA, SC, SFEDL, SLAP, SPIN, TPTS, and VISS), 8 invited lectures (not including those specific to the satellite events), and several tutorials. The events that comprise ETAPS address various aspects of the system - velopment process,

including specification, design, implementation, analysis, and improvement. The languages, methodologies, and tools which support these activities are all well within its scope. Different blends of theory and practice are represented, with an inclination towards theory with a practical motivation on one hand and soundly-based practice on the other. Many of the issues involved in software design apply to systems in general, including hardware systems, and the emphasis on software is not intended to be exclusive.

In *Author Under Sail: The Imagination of Jack London, 1902-1907*, Jay Williams explores Jack London's necessity to illustrate the inner workings of his vast imagination. In this second installment of a three-volume biography, Williams captures the life of a great writer expressed through his many creative works, such as *The Call of the Wild* and *White Fang*, as well as his first autobiographical memoir, *The Road*, some of his most significant contributions to the socialist cause, and notable uncompleted works. During this time, London became one of the most famous authors in America, perhaps even the author with the highest earnings, as he

prepared to become an equally famous international writer. *Author Under Sail* documents London's life in both a biographical and writerly fashion, depicting the importance of his writing experiences as his career followed a trajectory similar to America's from 1876 to 1916. The underground forces of London's narratives were shaped by a changing capitalist society, media outlets, racial issues, increases in women's rights, and advancements in national power. Williams factors in these elements while exploring London's deeply conflicted relationship with his own authorial inner life. In London's work, the imagination is figured as a ghost or as a ghostlike presence, and the author's personas, who form a dense population among his characters, are portrayed as haunted or troubled in some way. Along with examining the functions and works of London's exhaustive imagination, Williams takes a critical look at London's ability to tell his stories to wide arrays of audiences, stitching incidents together into coherent wholes so they became part of a raconteur's repertoire. *Author Under Sail* provides a multidimensional examination of the life of a
