Rectal Hernia Manual Guide In this hernia vs hemorrhoids  
guide, we will look at the differences between hemorrhoids and  
hernias so you can figure out which one you have. A painful  
bulge can mean a hernia or hemorrhoid, but while both  
conditions look similar in some cases, they are inherently  
different.

A hernia is a soft lump of an internal organ, and for mild cases,  
a doctor can massage it back into place. Treatment could be  
held off on a small and soft hernia, with your doctor monitoring  
it for any changes or new symptoms, like pain. Hemorrhoids  
and hemorrhoidal symptoms worsen when straining occurs.

Perineal hernia results from failure of the levator ani and coccygeal muscles, leading to herniation of pelvic or abdominal viscera. Signs may include perineal swelling, constipation, tenesmus, and dysuria. Diagnosis is based on history and physical examination, and radiography or ultrasonography may help confirm which tissues are herniated.

Hernias are a protrusion of soft tissues through a hole in a muscle. Hemorrhoids are itchy or painful areas on the anus near the rectum. Both can be very painful, but only hemorrhoids cause bleeding and itching. Rectal prolapse is also sometimes confused with a rectal hernia 1 2. With a

prolapse, symptoms are closer to those of hemorrhoids, but include:
