a learning system that wants something, that adapts its behavior in order to maximize a special signal from its environment. This was the idea of a "hedonistic" learning system, or, as we would say now, the idea of reinforcement learning. Like others, we had a sense that reinforcement learning had been thor-

Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment.

## Solutions Manual for Sutton & Barto Book: Reinforcement ...

The authors define reinforcement learning as learning how to map situations to actions so as to maximize a numerical reward. The machine that is indulging in reinforcement learning discovers on its own which actions will optimize the reward by trying out these actions.

Reinforcement Learning. Introduction. I am going through Reinforcement Learning: An Introduction by Richard S. Sutton and Andrew G. Barto and porting the lisp examples to Haskell in order to learn RL mainly but also to hone my functional programming skills. I chose the lisp examples over C examples obviously because I am coding Haskell.
