In almost every military intervention in its history, the US has made cultural mistakes that hindered attainment of its policy goals. From the strategic bombing of Vietnam to the accidental burning of the Koran in Afghanistan, it has blundered around with little consideration of local cultural beliefs and for the long-term effects on the host nation's society. Cultural anthropology--the so-called "handmaiden of colonialism"--has historically served as an intellectual bridge between Western powers and local nationals. What light can it shed on the intersection of the US military and foreign societies today? This book tells the story of anthropologists who worked directly for the military, such as Ursula Graham Bower, the only woman to hold a British combat command during WWII. Each faced challenges including the negative outcomes of exporting Western political models and errors of perception. Ranging from the British colonial era in Africa to the recent wars in Iraq and Afghanistan, Military Anthropology illustrates the conceptual, cultural and practical barriers encountered by military organisations operating in societies vastly different from their own.

The presence of a robust public domain is an essential precondition for cultural, social and economic development and for a healthy democratic process. But the public domain is under pressure as a result of the ongoing march towards an information economy. Items of information, which in the `old economy had little or no economic value, such as factual data, personal data, genetic information and pure ideas, have acquired independent economic value in the current information age, and consequently become the object of property rights making the information a tradable commodity. How and to what extent does the commodification of information affect the free flow of information and the integrity of the public domain? Does the freedom of expression and information, guaranteed inter alia in the European Convention on Human Rights, call for active state intervention to `save the public domain? What means both legal and practical are available or might be conceived to guarantee and foster a robust public domain? These were the main questions that were addressed in a major collaborative research project led by the Institute for Information Law of the University of Amsterdam (IViR) in co-operation with the Tilburg Institute for Law, Technology and Society (TILT) of Tilburg University, and funded by ITeR, the Dutch National Program for Information Technology and Law. Thirteen contributions from academia worldwide make up the present book, addressing the future of the public domain from a different angle. In addition, all authors were invited to reflect upon the notion and role of the public domain in the context of information law and policy. Should this concept be limited to that of a `negative image of (intellectual) property protection, i.e. all publicly available information not subject to a property right, and therefore freely (i.e. gratis) available, or should a broader approach be taken, e.g. all information available from public sources at affordable cost? Should information policies be aimed at maximizing the public domain or optimizing information flows? To what extent are these aims congruent? This book takes a broader, `information law oriented approach towards the question of preserving the public domain, in which a wide range of interrelated legal questions converge. Issues treated in this book include: Economic analysis of the public domain Fundamental rights analysis of

the public domain Impact of the application of technological protection measures and contractual restrictions on the public domain The impact of the expansion of copyright, database right and patent rights on the public domain The impact of the commodification of private data, government information, indigenous knowledge on the public domain The capacity of the Open Source and Creative Commons Movements to preserve the integrity of the public domain The Future of the Public Domain is an important work for all those interested or involved in the regulation of the knowledge economy. Legal scholars, academic and research institutions, corporate counsel, lawyers, government policymakers and regulators all these and more will benefit enormously from the thoughtful and incisive discussions presented here.

How is watching a movie similar to dreaming? What goes on in our minds when we become absorbed in a movie? How does looking " into" a movie screen allow us to experience the thoughts and feelings of a movie's characters? These and related questions are at the heart of The Power of Movies, a thoughtful, invigorating, and remarkably accessible book about a phenomenon seemingly beyond reach of our understanding. Colin McGinn– " an ingenious philosopher who thinks like a laser and writes like a dream," according to Steven Pinker– enhances our understanding of both movies and ourselves in this book of rare and refreshing insight.

Drawing on a wealth of knowledge and experience and a background of more than 1,000 magazine articles on the subject, engine control expert Jeff Hartman explains everything from the basics of engine management to the building of complicated project cars. Hartman has substantially updated the material from his 1993 MBI book Fuel Injection (0-879387-43-2) to address the incredible developments in automotive fuel injection technology from the past decade, including the multitude of import cars that are the subject of so much hot rodding today. Hartman's text is extremely detailed and logically arranged to help readers better understand this complex topic.
