This is a USMLE physiology review and study aid for medical students. It summarizes the basic concepts of physiology in a straightforward way, system by system, and explains, step by step, how to solve numerical problems, as in acid-base balance. Each chapter opens with an outline that helps organize the material and guide the student's progress. And each chapter closes with a set of 20 self-assessment questions accompanied by answers and detailed explanations. The questions are similar in style to those in the USMLE, including both multiple-choice and extended matching formats. The answer explanations contain memorization tips as well as additional information supplied to make the content of each chapter as thorough as possible.

Herlihy's the Human Body in Health and Illness Study Guide 1st Anz Edition Springer Nature

This third edition provides 2900 multiple choice questions on human anatomy and physiology, and some biophysical science, separated into 20 chapters and 68 categories. In addition, there are 64 essay topics. The answer to each question is accompanied by an explanation. Each chapter has an introduction to set the scene for the questions to come. However, not all possible information is provided within these Introductions, so an Anatomy and Physiology textbook is an indispensable aid to understanding the answers. The textbook offers a more holistic approach to the subjects of anatomy and physiology by also including biomechanics, biophysics and biochemistry. The questions have been used in end-of-semester examinations for undergraduate anatomy and physiology courses, and as such, reflect the focus of these particular courses and are pitched at this level to challenge

students that are beginning their training in anatomy and physiology. The question and answer combinations are intended for use by teachers, to select questions for their next examinations, and by students, when studying for an upcoming test. Students enrolled in the courses for which these questions were written include nursing, midwifery, paramedic, physiotherapy, occupational therapy, nutrition and dietetics, health sciences, exercise science, and students taking an anatomy and physiology course as an elective.
