The book explores the challenges and opportunities associated with high-altitude agro-ecosystems and the factors that influence them. It discusses the various indigenous agricultural practices and approaches, as well as the microbiology of mountain & hill agro-ecosystems, providing a comprehensive overview of the various factors that control the microbiome at high altitudes. The contributions examine microbiological advances, such as use of "omics" technologies for hill agriculture and environmental sustainability, and explore the use of nanotechnology for agricultural and environmental sustainability at higher altitudes. The book also describes various aspects of low-temperature microbiology in the context of high-altitude farming and environmental sustainability.

Rootes Story Haynes Manuals

The Rootes Story - The Making of a Global Automotive Empire traces the meteoric rise of the two Rootes brothers, William and Reginald, development of one of Britain's most important motor vehicle manufacturers. The Rootes Group acquired some of the most famous names in the British motor industry: Hillman, Humber, Sunbeam and Singer cars, as well as Commer and Karrier commercial vehicles. Over the years, some of the models built by Rootes would become household names: the Hillman Minx, Humber Super Snipe, Sunbeam Alpine, Singer Gazelle, Commer Superpoise and Karrier Bantam. In its heyday in the late 1950s, Rootes was the fourth largest manufacturer of cars and trucks in Britain, exporting to over 180 countries worldwide, becoming a global automotive empire. In this book, the people and various companies involved with Rootes are profiled, as are the cars and commercial vehicles built by them, with specifications of principal models. Personal insight from employees is given along with valuable contributions from the Rootes family themselves. This book celebrates the heyday of a truly global automotive empire and one of the most important British vehicle manufacturers of the twentieth century. This is the first book written about Rootes to be sanctioned by the Rootes family. Will be of great interest to owners and enthusiasts of Rootes cars, and those with an interest in British automotive and industrial history. Superbly illustrated with 52 colour and 361 black & white photographs.

Masculine Singular is an original interpretation of French New Wave cinema by one of France's leading feminist film scholars. While most criticism of the New Wave has concentrated on the filmmakers and their films, Geneviève Sellier focuses on the social and cultural turbulence of the cinema's formative years, from 1957 to 1962. The New Wave filmmakers were members of a young generation emerging on the French cultural scene, eager to acquire sexual and economic freedom. Almost all of them were men, and they "wrote" in the masculine first-person singular, often using male protagonists as stand-ins for themselves. In their films, they explored relations between men and women, and they expressed ambivalence about the new liberated woman. Sellier argues that gender relations and the construction of sexual identities were the primary subject of New Wave cinema. Sellier draws on sociological surveys, box office data, and popular magazines of the period, as well as analyses of specific New Wave films. She examines the development of the New Wave movement, its sociocultural and economic context, and the popular and critical reception of such well-known films as Jules et Jim and Hiroshima mon amour. In light of the filmmakers' focus on gender relations, Sellier reflects on the careers of New Wave's iconic female stars, including Jeanne Moreau and Brigitte Bardot. Sellier's thorough exploration of early New Wave cinema culminates in her contention that its principal legacy—the triumph of a certain kind of cinephilic discourse and of an "auteur theory" recognizing the director as artist—came at a steep price: creativity was reduced to a formalist game, and affirmation of New Wave cinema's modernity was accompanied by an association of creativity with masculinity.

Renault Megane Haynes Manuals

Implement machine learning and deep learning methodologies to build smart, cognitive AI projects using Python Key Features A go-to guide to help you master AI algorithms and concepts 8 real-world projects tackling different challenges in healthcare, e-commerce, and surveillance Use TensorFlow, Keras, and other Python libraries to implement smart AI applications Book Description This book will be a perfect companion if you want to build insightful projects from leading AI domains using Python. The book covers detailed implementation of projects from all the core disciplines of AI. We start by covering the basics of how to create smart systems using machine learning and deep learning techniques. You will assimilate various neural network architectures such as CNN, RNN, LSTM, to solve critical new world challenges. You will learn to train a model to detect diabetic retinopathy conditions in the human eye and create an intelligent system for performing a video-to-text translation. You will use the transfer learning technique in the healthcare domain and implement style transfer using GANs. Later you will learn to build AI-based recommendation systems, a mobile app for sentiment analysis and a powerful chatbot for carrying customer services. You will implement AI techniques in the cybersecurity domain to generate Captchas. Later you will train and build autonomous vehicles to self-drive using reinforcement learning. You will be using libraries from the Python ecosystem such as TensorFlow, Keras and more to bring the core aspects of machine learning, deep learning, and AI. By the end of this book, you will be skilled to build your own smart models for tackling any kind of AI problems without any hassle. What you will learn Build an intelligent machine translation system using seq-2-seq neural translation machines Create AI applications using GAN and deploy smart mobile apps using TensorFlow Translate videos into

text using CNN and RNN Implement smart AI Chatbots, and integrate and extend them in several domains Create smart reinforcement, learning-based applications using Q-Learning Break and generate CAPTCHA using Deep Learning and Adversarial Learning Who this book is for This book is intended for data scientists, machine learning professionals, and deep learning practitioners who are ready to extend their knowledge and potential in AI. If you want to build real-life smart systems to play a crucial role in every complex domain, then this book is what you need. Knowledge of Python programming and a familiarity with basic machine learning and deep learning concepts are expected to help you get the most out of the book
