In the last few years, knowledge management practices have evolved in organizations. The introduction of Web 2.0 technologies has encouraged new methods of information usage and knowledge sharing, which are frequently used by employees who already rely on these Web 2.0 technologies in their personal lives. Knowledge Management 2.0: Organizational Models and Enterprise Strategies provides an overview of theoretical and empirical research on knowledge management generation in the Web 2.0 age. Research in this book highlights knowledge management evolution with a global focus and investigates the impact knowledge management 2.0 has on business models, enterprise governance and strategies, human resources, and IT design, implementation, and appropriation in organizations.
Managing Joint Innovation CRC Press
This book presents essential information on systems and interactions in automotive transmission technology and outlines the methodologies used to analyze and develop transmission concepts and designs. Functions of and interactions between components and subassemblies of transmissions are introduced, providing a basis for designing transmission systems and for determining their potentials and properties in vehicle-specific applications: passenger cars, trucks, buses, tractors and motorcycles. With these fundamentals the presentation provides universal resources for both state-of-the-art and future transmission technologies, including

systems for electric and hybrid electric subcompacts from 1901 to today. Illustrated with photos and period ads.

How to Improve Management of Ideas PediaPress
This comprehensive account of the past, present and future of the automobile examines the key trends, key technologies and key players involved in the race to develop clean, environmentally friendly vehicles that are affordable and that do not compromise on safety or design. Undertaking a rigorous interrogation of our global dependency on oil, the author demonstrates just how unwise and unnecessary this is in light of current developments such as the fuel cell revolution and the increasing viability of hybrid cars, which use both petrol and electricity - innovations that could signal a new era of clean, sustainable energy. The arguments put forward draw on support from an eclectic range of sources - including industry insiders, scientists, economists and environmentalists - to make for an enlightening read.
Strategic Marketing in Fragile Economic Conditions Springer
Sources are eclectic, results mixed, but one thing is certain: car design is being forced up an ever tightening spiral of creativity. These machines are memorials of our tastes, yearnings and capabilities. They have layers of meaning and can, as Henry Ford knew, be read like a book... if only you know how. The story of the car is the story of how the objects of industry became a medium of artistic expression. This book tells that story in a series of case studies which reveal national characteristics: American flair, German technical suprematism, French vernacular chic, gorgeous Italian sculpture, English antiquarianism, Japanese ingenuity, Swedish responsibility. Cars featured appear in chronological date order from the 1908 Ford Model T to 2003 BMW 5 Series. The chosen cars will be specially

This reference book is a complete guide to the trends and leading companies in the engineering, research, design, innovation and development business fields: those firms that are dominant in engineering-based design and development, as well leaders in technology-based research and development. We have included companies that are making significant investments in research and development via as many disciplines as possible, whether that research is being funded by internal investment, by fees received from clients or by fees collected from government agencies. In this carefully-researched volume, you'll get all of the data you need on the American Engineering & Research Industry, including: engineering market analysis, complete industry basics, trends, research trends, patents, intellectual property, funding, research and development data, growth companies, investments, emerging technologies, CAD, CAE, CAM, and more. The book also contains major statistical tables covering everything from total U.S. R&D expenditures to the total number of scientists working in various disciplines, to amount of U.S. government grants for research. In addition, you'll get expertly written profiles of nearly 400 top Engineering and Research firms - the largest, most successful corporations in all facets of Engineering and Research, all cross-indexed by location, size and type of business. These corporate profiles include contact names, addresses, Internet addresses, fax numbers, toll-free numbers, plus growth and hiring plans, finances, research, marketing, technology, acquisitions and much more. This book will put the entire Engineering and Research industry in your hands. Purchasers of either the book or PDF version can receive a free copy of the company profiles database on CD-ROM, enabling key word search and export of key information, addresses, phone numbers and executive names with titles for every company profiled.

When Alex pulls up to meet "Max", he expects everything but a ninety-year-old lady who has her heart set on getting to Brussels by carpool. As for 'Max', who is actually called Maxine, she could not be more ill at ease when settling into the seat next to this young man with bloodshot eyes. God help her if he turned out to be a drug addict who hasn't slept in days! When it becomes clear that Maxine is suffering from Alzheimer's and wants to take matters into her own hands while she still can, and that Alex battles severe depression, a wonderful friendship starts to form between the unlikely pair. Before long, their travel plans take an unexpected turn... Translated from the French by Kelly Lardin.

This new book investigates how the relationships of international business networks (one buyer-multiple suppliers) develop over time, looking at the geographical angle as well as an actor composition point of view. Bart Kamp presents a framework that reveals what business-to-business (b2b) factors explain buyer-supplier co-location patterns, making it possible to predict the geographical behaviour of suppliers, and also assesses whether longevity is truly the deep-rooted feature of international b2b network relationships that it is often claimed to be.

Maximizing reader insights into project

management and handling complexity-driven risks, this book explores propagation effects, non-linear consequences, loops, and the emergence of positive properties that may occur over the course of a project. This book presents an introduction to project management and analysis of traditional project management approaches and their limits regarding complexity. It also includes overviews of recent research works about project complexity modelling and management as well as project complexity-driven issues. Moreover, the authors propose their own new approaches, new methodologies and new tools which may be used by project managers and/or researchers and/or students in the management of their projects. These new elements include project complexity definitions and frameworks, multi-criteria approaches for project complexity measurement, advanced methodologies for project management (propagation studies to anticipate potential behaviour of the project, and clustering approaches to improve coordination between project actors) and industrial case studies (automotive industry, civil engineering, railroad industry, performing arts,...) and exercises (with their solutions) which will allow readers to improve and strengthen their knowledge and skills in the management of complex and (thus) risky projects.

Innovation has a more and more important role in all industries, leading to a growing interest on the efficient management of the

innovation process. For a better understanding of this process, it has been organised in 5 stages: idea generation, idea selection, idea development, idea implementation and revision. This work provides a short review for each one of these 5 stages of the innovation process, its tools, methodologies and processes. The AutoEuropa case study, described in this work, illustrates an innovation process in which a large number of tools and methodologies have been used with excellent results. In this case, a prototype idea management system has been used with a strong impact on the results, specially, at the organisation and productivity level of the idea management team. For a better understanding of the current practices of innovation management, a survey has been developed, distributed and analysed. The survey results provided information on which are the tools and methodologies more used and graded the organisations as active, watcher or passive. From the analysis of the results, it was possible to detect significant correlations between the use of the different tools and confirm that the organisation described in the case study had made a strongly innovative initiative.

This is a brilliant examination of the complex processes of the post-1990 transformation in the Czech automotive industry and its selective integration into the West European system. The post-1990 restructuring of the industry is analyzed in the context of its pre-1990 development and in the context of the East European automobile industry as a whole. Specifically, the book examines the development and post-1990 restructuring of the Czech car, components, and truck industries.
