Financial Accounting for Business is an innovative approach that emphasizes critical thinking over the rote memorization of terms, such as “ debits ” and “ credits ” . The sequential learning model employed by the authors helps students see the bottom-line consequences of financial statements as it relates to the overall business, better preparing them for careers as accountants, entrepreneurs, and decision-makers. The authors focus initially on conceptual underpinnings -- the reasons why we approach procedures the way we do – rather than confusing students by front-loading the material with over-complicated details.
