There is a wealth of
research and

literature explaining
suburban sprawl and
the urgent need to
retrofit suburbia.
However, until now
there has been no
single guide that
directly explains
how to repair typical
sprawl elements.
The Sprawl Repair
Manual
demonstrates a step-
by-step design
process for the re-
balancing and re-
urbanization of
suburbia into more
sustainable,
economical, energy-
and resource-
efficient patterns,
from the region and
the community to
the block and the
individual building.
As Galina Tachieva
asserts in this
exceptionally useful
book, sprawl repair

will require a
proactive and
aggressive
approach, focused
on design,
regulation and
incentives. The
Sprawl Repair
Manual is a much-
needed, single-
volume reference
for fixing sprawl,
incorporating
changes into the
regulatory system,
and implementing
repairs through
incentives and
permitting
strategies. This
manual specifies the
expertise that's
needed and details
the techniques and
algorithms of sprawl
repair within the
context of reducing
the financial and
ecological footprint
of urban growth.

The Sprawl Repair Manual draws on more than two decades of practical experience in the field of repairing and building communities to analyze the current pattern of sprawl development, disassemble it into its elemental components, and present a process for transforming them into human-scale, sustainable elements. The techniques are illustrated both two- and three-dimensionally, providing users with clear methodologies for the sprawl repair interventions, some of which are radical, but all of which will produce positive

results.
