Inflammatory bowel disease (IBD) comprises of two conditions- ulcerative colitis and Crohn's disease. These involve chronic inflammation of the colon and small intestine. IBD is caused by a combination of genetic and environmental factors interacting with the body's defense system. IBD can exhibit intestinal complications such as toxic megacolon, ulcers, strictures and fistulas. Extraintestinal complications such as skin rashes, eye problems, liver disease and arthritis are also common. IBD is rarely a fatal disease. Fatalities may however arise due to bowel perforation, toxic megacolon and surgical complications. The goal of IBD treatment is achieving total remission. Often an acute resurgence of symptoms may occur, which may again require medication. Some of the research dimensions in the management of IBD explore the healing effects of helminthic therapy, prebiotics and probiotics, and cannabis. This book is a valuable compilation of topics, ranging from the basic to the most complex advancements in the diagnosis and therapy for inflammatory bowel disease. From theories to research to practical applications, case studies related to all contemporary topics of relevance to this condition have been included herein. It will help new researchers by foregrounding their knowledge in inflammatory bowel disease.

As Thomas Sterner points out, the economic 'toolkit' for dealing with environmental problems has become formidable. It includes taxes, charges, permits, deposit-refund systems, labeling, and other information disclosure mechanisms. Though not all these devices are widely used, empirical application has started within some sectors, and

we are beginning to see the first systematic efforts at an advanced policy design that takes due account of market-based incentives. Sterner's book encourages more widespread and careful use of economic policy instruments. Intended primarily for application in developing and transitional countries, the book compares the accumulated experiences of the use of economic policy instruments in the U.S. and Europe, as well as in select rich and poor countries in Asia, Africa, and Latin America. Ambitious in scope, the book discusses the design of instruments that can be employed in a wide range of contexts, including transportation, industrial pollution, water pricing, waste, fisheries, forests, and agriculture. Policy Instruments for Environmental and Natural Resource Management is deeply rooted in economics but also informed by perspectives drawn from political, legal, ecological, and psychological research. Sterner notes that, in addition to meeting requirements for efficiency, the selection and design of policy instruments must satisfy criteria involving equity and political acceptability. He is careful to distinguish between the well-designed plans of policymakers and the resulting behavior of society. Energy taxes can produce substantial environmental and revenue benefits and are an important component of countries' fiscal systems. Although the principle that these taxes should reflect global warming, air pollution, road congestion, and other adverse environmental impacts of energy use is well established, there has been little previous work providing guidance on how countries can put this principle into practice. This book develops a practical methodology, and associated tools, to show how the major environmental damages from energy can be quantified for different countries and used to design the efficient set of energy taxes. The results, which are illustrated for more than 150 countries, suggest there is pervasive mispricing of energy across developed and developing countries alike with much at stake in policy reform. At a global level, implementing efficient energy prices would reduce carbon emissions by an estimated 23 percent and fossil-fuel air pollution deaths by 63 percent, while raising revenues (badly needed for fiscal consolidation and reducing other burdensome taxes) averaging 2.6 percent of GDP.

Henri de-Toulouse-Lautrec brought to his art a zest for life as well as an impeccable style. It is an exciting discovery to find that Lautrec applies this same exuberance and meticulous technique to the art of cuisine--that he invented recipes and cooked new dishes as an artistic creation worthy of his serious attention. This volume is a collection of the recipes that Lautrec invented, or were garnered in his company from acquaintances of all classes of society. It has been illustrated with the menus that Lautrec himself designed and decorated, as well as with a rich abundance of other appropriate Lautrec paintings and drawings. The frontispiece is a portrait by Edouard Vuillard of Lautrec preparing one of his masterful dishes. The recipes are given here in their original form, retaining their color of thought and language. The only modifications are culinary notes that have been added to facilitate the work of modern cooks. Lautrec took great pride in his culinary ability, and if he felt it would not be appreciated, he would say that some people "are not worth of ring dove with olives, they will never have any and they will never know what it is." Lautrec planned meals carefully, made beautifully decorated menus, and was inspired by the dinners to draw more sketches of the dinners, and of the food. He also brought to cuisine, as to the rest of his life, a marvelous wit. Who could forget the invitation to eat kangaroo, in honor of an animal that he had seen boxing at a circus (it was replaced at the last moment by an enormous sheep with an artificial pouch): or the housewarming of the apartment of his friend Natanson, where in a crazy atmosphere, he managed to intoxicate the artistic elite of Paris and launch the fashion of cocktail food. We owe the record of this cuisine (and also of a great body of the art collection itself) to Maurice Joyant. Joyant and Lautrec had been childhood friends, and their intimacy was renewed and deepened during the Montmartre years, when Lautrec's fame was growing and Joyant was director of the same art gallery in Paris that Theo Van Gogh had run before him. Lautrec was, throughout their relationship, the artist and innovator; Joyant, the steadying influence, the protector, and, after the painter's death, the executor. This book is a tribute to their friendship and to their daily intercourse in art and in cuisine. Thus, art, friendship, and food have come together in *The Art of Cuisine* as a joyful legacy of Henri de Toulouse-Lautrec and Maurice Joyant.

This book is made up of contributions dealing with heritage stones from different countries around the world. The stones are described, as well as their use in vernacular and contemporaneous architecture. Heritage stones are those stones that have special significance in human culture. Examples include some very important stones that have been either neglected because they are no longer extracted, or stones that have great significance in commercial terms but knowledge of their national and/or international heritage has not been well documented. In this collection of articles, we have tried to spread awareness of architectural heritage around the world, the natural stones that have been used in its construction, and the need to preserve historical quarries that once provided the source of such stones. Historical quarries are linked to regional culture and tradition. Because of the specific technical and aesthetical characteristics of heritage stones, which have lasted for centuries, these

historical quarries should be preserved to be able to use the stones for the proper restoration of monuments and historical buildings to avoid negative actions that can be observed in many places in the restoration of buildings, which are some times part of World Heritage sites. The final intention of this book is to continuously grow the interest on this fascinating subject of heritage stones.
