The combined value of all M&A deals from 1980 to the end of 2015 was almost \$65 trillion—bigger than the current annual world economy value outside the US. In that same period, almost 900,000 deals were announced. Many were questionable, as *Why Deals Fail* shows. With companies expected to continue to merge in record numbers, it is time to learn some critical lessons from those deals. In 2014 the government of the UK—one of the most open markets globally for M&A—commissioned Cass Business School's Mergers and Acquisitions Research Centre, headed by Scott Moeller, to investigate whether M&A has a negative or positive impact on the country's economy. Their findings: M&A deals do generate short-term benefits for the economy, especially because some large deals were spectacularly successful. However, over the longer term, the results are less clear-cut. Despite those highly successful tie-ups that drove the economic results to an overall positive average, the majority of UK mergers by number in the research period actually destroyed value. In summary, deals can be hugely beneficial for all involved when you get it right but they still, at large, struggle to live up to their initial hype—and potential. Done wrong, they can damage business and, by extension, the economy and result in hundreds if not thousands of employees being made redundant. Most of the mergers detailed in this book are lessons in what not to do; the authors get behind the corporate veil to show what went wrong when huge and otherwise highly successful global businesses such as the Royal Bank of Scotland, Microsoft, and HP embarked on M&A transactions. *Why Deals Fail* is aimed at business people who want to understand better how M&A can drive corporate fortunes. Whether you are a seasoned M&A professional, an employee in a company that is acquiring or being acquired, or a newly graduated business student doing analysis about a deal, this book will help you to make the right decisions when they are most crucial.

Training in the motor vehicle repair and sales sector in the Netherlands was examined in a study that included the following approaches: review of the sector's structure/characteristics, institutional and social context, employment practices, changing conditions, and available education and training; in-depth case studies of four auto repair shops and dealerships (two small, one medium-sized, and one large firm); and identification of economic, employment, and training trends. It was discovered that, in response to stagnation of the Dutch motor vehicle sales and repair industry in the 1990s, both the Dutch government and the industry have increased their commitment to vocational training and inservice courses and have created a training infrastructure that compares favorably with those of other sectors in the Dutch economy. All four businesses studied in depth were managed by individuals who were very involved in training, had access to good facilities and opportunities for on-the-job teaching/training, and could avail themselves of good external provisions for inservice training. Quality of service was an important element of training philosophy. Training needs were not always analyzed in a very structured way, and none of the businesses studied evaluated systematically the costs/benefits of training. Contains 20 references and 19 tables/figures. (MN)

During the past few decades the global auto industry has concentrated into a small number of groups led by GM, Ford, Daimler-Chrysler, VW, Toyota, and Renault. The trend is of great political and economic significance because of the large size of the industry, its importance to the economic health of many countries, and its geographic spread around the globe. Many reasons are commonly cited when trying to explain this rapid corporate consolidation—cost savings, new products and markets, price controls, and labor negotiations chief among them. Frequently, however, mergers do not achieve their stated goals. *Merging Traffic* explores all these factors and goes on to suggest that, as with the mystique of the automobile itself, other motivations may prevail.

The essential follow-up to the BusinessWeek bestseller *Trading Up* A BMW in a Costco parking lot? A working class family with a 50 inch plasma TV? A 27-year-old Japanese administrative assistant with a collection of Coach purses? An 87-year-old retiree in Ohio exclaiming the value of Aldi brand honey?

What's going on in the mind of the new consumer? Today's consumers can seem impossible to understand, and even harder to please. For instance, the average mall shopper will spend her \$100, then leave when she hits that limit. She'll probably buy shoes rather than clothing, because she doesn't want to think about her dress size. And the store most likely to get her money isn't the one with the nicest display or the deepest discounts... it's the one closest to her parking spot. In his research with dozens of leading companies, Michael J. Silverstein has interviewed thousands of customers, extracting fascinating patterns about what really drives their purchase decisions. His first book, the acclaimed bestseller *Trading Up*, has taught a generation of marketers about the "new luxury" phenomenon, and why consumers will happily pay a steep premium for goods and services that are emotionally satisfying, from golf clubs to bathroom hardware to beauty products. But *Trading Up* only revealed part of the story of the new consumer. The same middle class consumers who are happily trading up at Victoria's Secret and Panera are going on treasure hunts at Costco and Home Depot. And they are often getting as much emotional satisfaction in the discount stores as in the luxury stores. Silverstein's new book explains how the new consumer approaches bargain hunting, and how even the most mundane shopping — for things like paper towels and pet food -- have become an adventure rather than a tedious chore. It turns out that, in just about every consumer category, both the high end and the low end are growing and innovation rich. Many middle class consumers gladly spend \$5.00 a day for a vente Starbucks latte; others spend 40 cents a day on home brewed coffee, feel good about their frugality, and save up the difference to buy Apple's newest Nano. *Treasure Hunt* explains the success of companies as diverse as Dollar General, LG, H. E. Butt, Ebay, Commerce Bank, and Tchibo. Beware: in our bifurcated global market, businesses need a clear strategy for aiming high or low, while staying away from the treacherous middle, where so many have recently stumbled. If your offering isn't exciting enough to inspire trading up, but not enough of a bargain to satisfy the treasure hunters, you'll have no emotional connection with your target audience. And, like General Motors or Sears in recent years, your tried-and-true marketing strategies will go into a severe stall. *Treasure Hunt* takes us into the homes of real people making real decisions, and into the CEO's offices of innovative companies finding new ways to accommodate them. Written with the same flair, empathy, and intelligence that made *Trading Up* an instant business classic, this book is an essential guide to the moods and habits of the constantly changing consumer.

The Autocar CRC Press

This book takes a look at fully automated, autonomous vehicles and discusses many open questions: How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers? Where do automated vehicles fall under current legal frameworks? What risks are associated with automation and how will society respond to these risks? How will the marketplace react to automated vehicles and what changes may be necessary for companies? Experts from Germany and the United States define key societal, engineering, and mobility issues related to the automation of vehicles. They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment, interact with other road users, and choose actions that may have ethical consequences. The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are tremendous, the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design. Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks. By covering all of these topics, the book aims to provide a current, comprehensive, and scientifically sound treatment of the emerging field of “ autonomous driving”.

The perfect crime — it's a work of art, in Frank Cottrell Boyce's ingenious story, *Framed*. Dylan is the only boy living in the tiny Welsh town of Manod. His parents run the Snowdonia Oasis Auto Marvel garage — and when he's not trying to persuade his sisters to play football, Dylan is in charge of the petrol log. And that means he gets to keep track of everyone coming in and out of Manod — what car they drive, what they're called, even their favourite flavour of crisps. But when a mysterious convoy of lorries trundles up the misty mountainside towards an old, disused mine, even Dylan is confounded. Who are these people — and what have they got to hide? A story inspired by a press cutting describing how, during World War II, the treasured contents of London's National Gallery were stored in Welsh slate mines. Once a month, a morale-boosting masterpiece would be unveiled in the village and then returned to London for viewing. This is a funny and

touching exploration of how art — its beauty and its value — touches the life of one little boy and his big family in a very small town. This edition of Framed includes bonus material and discussion questions from Frank Cottrell Boyce, and illustrations by Steven Lenton.
