Plasma processing of materials is a critical technology to several of the largest manufacturing industries in the world--electronics, aerospace, automotive, steel, biomedical, and toxic waste management. This book describes the relationship between plasma processes and the many industrial applications, examines in detail plasma processing in the electronics industry, highlights the scientific foundation underlying this technology, and discusses education issues in this multidisciplinary field. The committee recommends a coordinated, focused, and well-funded research program in this area that involves the university, federal laboratory, and industrial sectors of the community. It also points out that because plasma processing is an integral part of the infrastructure of so many American industries, it is important for both the economy and the national security that America maintain a strong leadership role in this technology.

A beautiful, arresting story about race and the relationships that shape us through life by the legendary Nobel Prize winner—for the first time in a beautifully produced stand-alone edition, with an introduction by Zadie Smith "A puzzle of a story, then—a game.... When [Morrison] called *Recitatif* an 'experiment' she meant it. The subject of the experiment is the reader." —Zadie Smith, award-winning, best-selling author of *White Teeth* In this 1983 short story--the only short story Morrison ever wrote--we meet Twyla and Roberta, who have known each other since they were eight years old and spent four months together as roommates in St. Bonaventure shelter. Inseparable then, they lose touch as they grow older, only later to find each other again at a diner, a grocery store, and again at a protest. Seemingly at opposite ends of every problem, and at each other's throats each time they meet, the two women still cannot deny the deep bond their shared experience has forged between them. Another work of genius by this masterly writer, *Recitatif* keeps Twyla's and Roberta's races ambiguous throughout the story. Morrison herself described *Recitatif*, a story which will keep readers thinking and discussing for years to come, as "an experiment in the removal of all racial codes from a narrative about two characters of different races for whom racial identity is crucial." We know that one is white and one is Black, but which is which? And who is right about the race of the woman the girls tormented at the orphanage? A remarkable look into what keeps us together and what keeps us apart, and how perceptions are made tangible by reality, *Recitatif* is a gift to readers in these changing times.

This book provides a unique map of the focus and directions of contemporary research on school leadership since 2000 in 24 countries. Each of these directions has its own particular cultural, educational and policy history. Taken together, the various chapters in the volume provide a rich and varied mosaic of what is currently known and what is yet to be discovered about the roles and practices of principals, and their contributions to the improvement of teaching and the learning and achievement of students. The particular foci and methodological emphases of the research reported illustrate the different phases in the development of educational policies and provision in each country. This collection is an important addition to existing international research that has shown beyond any reasonable doubt that the influence of school principals is second only to that of teachers in their capacity to impact students' progress and achievement and to promote equity and social justice.

This timely and hugely practical work provides a score of examples from contemporary and historical scientific presentations to show clearly what makes an oral presentation effective. It considers presentations made to persuade an audience to adopt some course of action (such as funding a proposal) as well as presentations made to communicate information, and it considers these from four perspectives: speech, structure, visual aids, and delivery. It also discusses computer-based projections and slide shows as well as overhead projections. In particular, it looks at ways of organizing graphics and text in projected images and of using layout and design to present the information efficiently and effectively.

The National Children's Study (NCS) is planned to be the largest long-term study of environmental and genetic effects on children's health ever conducted in the United States. It proposes to examine the effects of environmental influences on the health and development of approximately 100,000 children across the United States, following them from before birth until age 21. By archiving all of the data collected, the NCS is intended to provide a valuable resource for analyses conducted many years into the future. This book evaluates the research plan for the NCS, by assessing the scientific rigor of the study and the extent to which it is being carried out with methods, measures, and collection of data and specimens to maximize the scientific yield of the study. The book concludes that if the NCS is conducted as proposed, the database derived from the study should be valuable for investigating hypotheses described in the research plan as well as additional hypotheses that will evolve. Nevertheless, there are important weaknesses and shortcomings in the research plan that diminish the study's expected value below what it might be.

In a research project, the most critical part is writing the report in a way which presents not just our findings, but the process through which we arrived at these findings. It demands honesty about our research design and our perspectives, so that others can understand not just the research we have produced, but something about the way in which we have produced it. When carrying out research it is all too easy to become embroiled in our own research questions and objectives, so that when it comes to presenting our research we forget about situating it within the wider body of knowledge. For the lack of proper knowledge, many people find it difficult to writing up their paper. This book is intended to help you organize and write a quality research paper for Social Sciences. This book also gives you the idea about research design.

George Orwell set out 'to make political writing into an art', and to a wide extent this aim shaped the future of English literature – his descriptions of authoritarian regimes helped to form a new vocabulary that is fundamental to understanding totalitarianism. While *1984* and *Animal Farm* are amongst the most popular classic novels in the English language, this new series of Orwell's essays seeks to bring a wider selection of his writing on politics and literature to a new readership. In *Politics and the English Language*, the second in the Orwell's Essays series, Orwell takes aim at the language used in politics, which, he says, 'is designed to make lies sound truthful and

murder respectable, and to give an appearance of solidity to pure wind'. In an age where the language used in politics is constantly under the microscope, Orwell's *Politics and the English Language* is just as relevant today, and gives the reader a vital understanding of the tactics at play.
