Writing a research proposal is one of the most important tasks facing academics, researchers and postgraduate students. Yet there is a good deal of misinformation and a great lack of guidance about what

constitutes a good research proposal and what can be done to maximise one's chances of writing a successful research proposal. Denicolo and Becker recognise the importance of developing an effective research proposal for gaining either a place on a research degree programme or funding to support research projects and set out to explore the main factors that that proposal writers need to attend to in developing successful proposals of their own. *Developing Research Proposals* will help readers to understand the context within which their proposal will be read, what the reviewers are looking for and will be influenced by, while also supporting the development of relevant skills through advice and practical activities. This book: Explores the nature and purpose of different kinds of proposals Focuses on the actual research proposed Discusses how best to carry out and structure the literature review Examines the posing and phrasing of research questions and hypotheses Looks at how methods and methodology should be handled in a proposal Discusses the crucial issues of planning, strategy and timing in developing targeted proposals Denicolo and Becker draw together the key elements in the process of preparing and submitting a proposal and concludes with advice on responding to the results, successful or not, and their relevance to future proposals. The *Success in Research* series, from Cindy Becker and Pam Denicolo, provides short, authoritative and accessible guides on key areas of professional and research development. Avoiding jargon and cutting to the chase of what you really need to know, these practical and supportive books cover a range of areas from presenting research to

achieving impact, and from publishing journal articles to developing proposals. They are essential reading for any student or researcher interested in developing their skills and broadening their professional and methodological knowledge in an academic context.

Essentials of Behavioral Research F.A. Davis

Until quite recently questions about methodology in legal research have been largely confined to understanding the role of doctrinal research as a scholarly discipline. In turn this has involved asking questions not only about coverage but, fundamentally, questions about the identity of the discipline. Is it (mainly) descriptive, hermeneutical, or normative? Should it also be explanatory? Legal scholarship has been torn between, on the one hand, grasping the expanding reality of law and its context, and, on the other, reducing this complex whole to manageable proportions. The purely internal analysis of a legal system, isolated from any societal context, remains an option, and is still seen in the approach of the French academy, but as law aims at ordering society and influencing human behaviour, this approach is felt by many scholars to be insufficient. Consequently many attempts have been made to conceive legal research differently. Social scientific and

comparative approaches have proven fruitful. However, does the introduction of other approaches leave merely a residue of 'legal doctrine', to which pockets of social sciences can be added, or should legal doctrine be merged with the social sciences? What would such a broad interdisciplinary field look like and what would its methods be? This book is an attempt to answer some of these questions.

The culture of the Nuevomexicanos, forged by Spanish-speaking residents of New Mexico over the course of many centuries, is known for its richness and diversity. Expressing New Mexico contributes to a present-day renaissance of research on Nuevomexicano culture by assembling eleven original and noteworthy essays. They are grouped under two broad headings: òexpressing cultureó and òexpressing place.ó Expressing culture derives from the notion of òexpressive culture,ó referring to òfine artó productions, such as music, painting, sculpture, drawing, dance, drama, and film, but it is expanded here to include folklore, religious ritual, community commemoration, ethnopolitical identity, and the pragmatics of ritualized response to the difficult problems of everyday life. Intertwined with the concept of expressive culture is that of òplaceó in relation to New Mexico itself. Place is addressed directly by four of the authors in this anthology and is present in some way and in varying degrees among the rest. Place

figures prominently in Nuevomexicano character, contributors argue. They assert that Nuevomexicanos and Nuevomexicanas construct and develop a sense of self that is shaped by the geography and culture of the state as well as by their heritage. Many of the articles deal with recent events or with recent reverberations of important historical events, which imbues the collection with a sense of immediacy. Rituals, traditions, community commemorations, self-concepts, and historical revisionism all play key roles. Contributors include both prominent and emerging scholars united by their interest in, and fascination with, the distinctiveness of Nuevomexicano culture.
