This book examines the different forms that honour-based abuse crimes take and analyses the discretionary police practices employed when responding to these incidents. Honour-based abuse is an incident or crime involving violence, threats of violence, intimidation, coercion or abuse committed in order to protect or defend the honour of an individual, family and or community for a perceived breach of their code of behaviour. Based on unique UK police data, it includes examination of one hundred honour

abuse cases and interviews with fifteen predominantly detective specialist police officers that investigate this crime. This book recognises the challenges encountered when policing honour-based abuse and offers recommendations for addressing them. It will particularly benefit police forces in England and Wales, the Home Office, scholars in gendered violence and policing, and non-government organisations (charities supporting victims) by highlighting some of the issues associated with policing, partnership working arrangements and safeguarding victims of honour-based abuse crimes.

### The Research Process in Sport, Exercise and Health ABC-CLIO

What are the challenges and potential pitfalls of real research? What decision-making process is followed by successful researchers? The Research Process in Sport, Exercise and Health fills an important gap in the research methods literature. Conventional research methods textbooks focus on theory and descriptions of hypothetical techniques, while the peer-reviewed research literature is mainly concerned with discussion of data and the significance of results. In this book, a team of successful researchers from across the full range of sub-disciplines in sport, exercise and health discuss real pieces of research, describing the processes they went through, the decisions that they made, the problems they encountered and the things they would have done differently. As a result, the book goes further than any other in bringing the research process to life, helping students identify potential issues and problems with their own research right at the beginning of the process. The book covers the whole span of the research process, including: identifying the research problem justifying the research question choosing an appropriate method data collection and analysis identifying a study 's contribution to knowledge and/or

applied practice disseminating results.

Featuring real-world studies from sport psychology, biomechanics, sports coaching, ethics in sport, sports marketing, health studies, sport sociology, performance analysis, and strength and conditioning, the book is an essential companion for research methods courses or dissertations on any sport or exercise degree programme.
