Active Teaching and Active Learning Strategies: Creating a Blueprint for Success is the cumulative result of a year of reflecting, asking, and listening to questions, and comments, that many have concerning the education of our youth. The book's genesis however, started many years ago as the state of California, along with many other states, embraced a standards based accountability system. This accountability has now been coupled with the recent addition of The No Child Left Behind Legislation. In a real sense, we are entering both the best and worst of times. I say this because of the effects of high-stakes testing and the requirement that all students reach high levels of proficiency which admittedly, are very lofty goals. For this to be realized, changes will be required in teaching and assessment, as well as a more concentrated focus on student learning. The instructional design introduced in this book advocates four components: academic, social/collaborative, contextual, and cognitive/developmental. These components work in tandem with Active Teaching and Learning Strategies. Combined, they form a student responsive instructional methodology, which optimizes student success, and academic achievement. We wanted to create a book that demonstrated to those of us in the field of education the value of looking at academic standards with data about our students, and reflecting on how this information should influence our choices concerning instructional practices and our perceptions about the students that we are entrusted with. The focus of this endeavor is to see all students achieve and succeed, and to keep passion and compassion at the heart of all that we do. It is the premise of this book that the difference between effective and outstanding teachers are that outstanding teachers care, know how to utilize data, practice active teaching strategies, and promote the active learning of students. Together these characteristics became the design, and course of action, that Created a Blueprint for Success.

Teachers make a difference. The success of any plan for improving educational outcomes depends on the teachers who carry it out and thus on the abilities of those attracted to the field and their preparation. Yet there are many questions about how teachers are being prepared and how they ought to be prepared. Yet, teacher preparation is often treated as an afterthought in discussions of improving the public education system. Preparing Teachers addresses the issue of teacher preparation with specific attention to reading, mathematics, and science. The book evaluates the characteristics of the candidates who enter teacher preparation programs, the sorts of instruction and experiences teacher candidates receive in preparation programs, and the extent that the required instruction and experiences are consistent with converging scientific evidence. Preparing Teachers also identifies a need for a data collection model to provide valid and reliable information about the content knowledge, pedagogical competence, and effectiveness of graduates from the various kinds of teacher preparation programs. Federal and state policy makers need reliable, outcomes-based information to make sound decisions, and teacher educators need to know how best to contribute to the development of effective teachers. Clearer understanding of the content and character of effective teacher preparation is critical to improving it and to ensuring that the same critiques and questions are not being repeated 10 years from now.

In this instant New York Times bestseller, Angela Duckworth shows anyone striving to succeed that the secret to outstanding achievement is not talent, but a special blend of passion and persistence she calls "grit." "Inspiration for non-genius everywhere" (People). The daughter of a scientist who frequently noted her lack of "genius," Angela Duckworth is now a celebrated researcher and professor. It was her early eye-opening stints in teaching, business consulting, and neuroscience that led to her hypothesis about what really drives success: not genius, but a unique combination of passion and long-term perseverance. In Grit, she takes us into the field to visit cadets struggling through their first days at West Point, teachers working in some of the toughest schools, and young finalists in the National Spelling Bee. She also mines fascinating insights from history and shows what can be gleaned from modern experiments in peak performance. Finally, she shares what she's learned from interviewing dozens of high achievers—from JP Morgan CEO Jamie Dimon to New Yorker cartoon editor Bob Mankoff to Seattle Seahawks Coach Pete Carroll. "Duckworth's ideas about the cultivation of tenacity have clearly changed some lives for the better" (The New York Times Book Review). Among Grit's most valuable insights: any effort you make ultimately counts twice toward your goal; grit can be learned, regardless of IQ or circumstances; when it comes to child-rearing, neither a warm embrace nor high standards will work by themselves; how to trigger lifelong interest; the magic of the Hard Thing Rule; and so much more. Wondrously personal, insightful, and even life-changing, Grit is a book about what goes through your head when you fall down, and how that—not talent or luck—makes all the difference. This is "a fascinating tour of the psychological research on success" (The Wall Street Journal).
