*Immigration The New Americans* Economic, Demographic, and Fiscal Effects of Immigration

From less than 5 percent in 1980, the share of residents from the former Republic of Yugoslavia in the total foreign population in Switzerland rose to almost 25% in 2000, to become one of the largest foreign communities. The largest increase occurs mostly between 1985 and 1998 and represents a unique development in the composition of immigration to Switzerland, as it coincides with a new policy, which from 1995 gives priority to workers from the European Union for new permits and severely restricts work permits for migrants from the rest of the world. The empirical analysis shows that when there is no discriminatory treatment by immigration policy, immigrant workers from the former Yugoslavia respond to financial and cultural incentives in the same way as their unskilled counterparts from Southern European countries. The restriction on permit availability in the mid-1990s appears to have weakened the financial and cultural attractiveness of Switzerland for immigrants from the former Yugoslavia. This may signal a change in the characteristics of migrants from the region toward higher skill levels.

Drawing on the latest empirical and

surveys the key components of innovation policy and the social returns to innovation investment. It examines mechanisms that can advance the pace of invention and innovative activity, including expanding the research workforce through schooling and immigration policy and funding basic research. *Evidence from Thirty Demographic Groups* Lfb Scholarly Pub Llc

This open access book covers the main issues, challenges and techniques concerning the application of qualitative methodologies to the study of migration. It discusses theoretical, epistemological and empirical questions that must be considered

before, during, and after undertaking qualitative research in migration studies. It also covers recent innovative developments and addresses the key issues and major challenges that qualitative migration research may face at different stages i.e. crafting the research questions, defining approaches, developing concepts and theoretical frameworks, mapping categories, selecting cases, dealing with concerns of self-reflection, collecting and processing empirical evidence through various techniques, including visual data, dealing with ethical issues, and developing policy-research dialogues. Each chapter discusses relative strengths and limitations of qualitative research. The chapters also identify the main drivers for qualitative research development in migration studies. It is a unique volume as it brings together a multidisciplinary perspective as well as illustrations of different issues derived from the research experience of the recognized authors. One additional value of this book is its geographic focus on Europe. It seeks to explore theoretical and methodological issues that are raised by distinctive features of the European context. This volume will be a useful reference source for scholars and professionals in migration studies and in social sciences as well. The publication is also addressed to graduate and post-graduate students and, more generally, to those who embark on the task of doing qualitative research for the first time in the field of migration.

The growing importance of immigration in the United States today prompted this examination of the adequacy of U.S. immigration data. This volume summarizes data needs in four areas: immigration trends, assimilation and impacts, labor force issues, and family and social networks. It includes recommendations on additional sources for the data needed for program and research purposes, and new questions and refinements of questions within existing data sources to improve the understanding of immigration and immigrant trends.

Once the prime destination for westward-moving young Americans, California has become a magnet for a new wave of migration in recent years. Changes in immigration law and the ebbs and flows of the increasingly global economy have led to an unprecedented influx of newcomers from every continent and every cultural, ethnic, and socioeconomic group. How has the

demographic structure of California changed in the past 15 years? What are the social and spatial consequences of this transformation? Where are the new immigrants living, and how successfully are they realizing their versions of the American dream? Examining the impact of large-scale immigration on local communities, this book presents an in-depth geographical case study of the most active "melting pot" in the United States today.

Policies, Challenges and Impact Harvard University Press

This book sheds light on one of the most controversial issues of the decade. It identifies the economic gains and losses from immigration--for the nation, states, and local areas--and provides a foundation for public discussion and policymaking. Three key questions are explored: What is the influence of immigration on the overall economy, especially national and regional labor markets? What are the overall effects of immigration on federal, state, and local government budgets? What effects will immigration have on the future size and makeup of the nation's population over the next 50 years? The New Americans examines what immigrants gain by coming to the United States and what they contribute to the country, the skills of immigrants and those of native-born Americans, the experiences of immigrant women and other groups, and much more. It offers examples of how to measure the impact of immigration on government revenues and expenditures--estimating one year's fiscal impact in California, New Jersey, and the United States and projecting the long-run fiscal effects on government revenues and expenditures. Also included is background information on immigration policies and practices and data on where immigrants come from, what they do in America, and how they will change the nation's social fabric in the decades to come.

Seminar paper from the year 2005 in the subject American Studies - Culture and Applied Geography, grade: 2,0, University of Mannheim (Amerikanistik), course: A survey of contemporary America, 7 entries in the bibliography, language: English, abstract: The USA is sometimes called "land of the immigrants" or "the promised land." In early times immigrants from different origins and nationalities immigrated to the USA. That's why the USA developed to a multicultural society. There is the great idea of all people from different nations living together. America is designated as a "melting pot." This term tries to describe the assimilation of immigrants into American life. Its literal meaning is a chemical one: several different elements melted together to form a new product. The idea was that immigrants would fuse together with the "old" Americans, giving up their old lifestyles and cultures to form one American nation. The motto "e pluribus unum" which still appears on American coins today, has been used since 1782, reflecting how even the early Americans saw their country. But does a multicultural society system like this really work? That's the main point I will try to work out in my research paper. To get through this topic it needs to be defined very clearly what immigration means in general and to describe briefly the immigration process from the early times till nowadays. This should be explained with some facts and figures to build the foundation of the following analysis. I will also show the reasons and problems of illegal immigration which is an important topic in the American society. That brings us to the next point the Hispanic Americans, which representative for American immigrants. I will use The Hispanic Americans as an example to mark the assimilation problem of immigrants in the USA. Furthermore you can use this group of immigrants to explain the multicultural situation in the USA today. I will round off my work with the part of the conclusion and I

DebBurman studies the differences in education among immigrants: compared by generation, age-at-immigration, and country-of-origin. Educational attainment of adults and school enrollment among high school and pre-school children are evaluated using Becker's theories of human capital investment and demand for schooling. Second-generation adult immigrants have the highest level of schooling, exceeding that of both first-generation and U.S. born, while the first-generation possess the highest

level of pre- and high school enrollment. Teenage immigrants complete fewer school years and are less likely enroll in high school. Hispanics and Blacks lag non-Hispanic Whites. This gap narrows with higher order immigrant generations among Hispanics, but widens among blacks. However, schooling differences by country-of-origin are more complex.

The story of West Indian immigrants to the United States is generally considered to be a great success. Mary Waters, however, tells a very different story. She finds that the values that gain first-generation immigrants initial success--a willingness to work hard, a lack of attention to racism, a desire for education, an incentive to save--are undermined by the realities of life and race relations in the United States. Contrary to long-held beliefs, Waters finds, those who resist Americanization are most likely to succeed economically, especially in the second generation.

Seminar paper from the year 2005 in the subject American Studies - Culture and Applied Geography, grade: 2,0, Dresden Technical University, 3 + 1 online entries in the bibliography, language: English, abstract: In this research paper the focus shall be on Chinese workers in the garment factories of New York City's Chinatown as an example of immigrant workers in the United States. After the Immigration Act of 1965, which abolished the national origin system and gave priority to the reunification of families, chain immigration in the United States of America started in large numbers. The most visible beneficiaries were the Asians because the quota system was abandoned for them. A lot of Chinese immigrants, especially women, entered the United States with this chain immigration. The high number of women amongst the immigrants was a reason that the former bachelor's society - which means that the Chinese male population outnumbered Chinese women in New York City on a large scale - turned into an almost well - balanced one. The labor force of the newly arrived women enabled the growth of New York City's garment industry. According to some statistics of Min Zhou and Regina Nordquist, the concentration of immigrant Chinese women in the garment industry was - and still is - extraordinary. Almost 85% of the work force in Chinatown's garment industry are immigrant women, and the largest group of them are Chinese immigrant women (Zhou/ Nordquist 262). Because of the large-scale immigration after 1965 and the large supply of female work force, the garment industry of New York City's Chinatown continued to be based on low-cost immigrant labor (Zhou/ Nordquist 261). Overall, more than half of Chinese women find jobs in garment factories. Because of the obvious dominance of Chinese immigrant women's labor force in the garment industry, this research paper will concentrate on them. Although

Immigration can expand labor supply and create greater competition for native-born workers. But immigrants may also start new firms, expanding labor demand. This paper uses U.S. administrative data and other data resources to study the role of immigrants in entrepreneurship. We ask how often immigrants start companies, how many jobs these firms create, and how these firms compare with those founded by U.S.-born individuals. A simple model provides a measurement framework for addressing the dual roles of immigrants as founders and workers. The findings suggest that immigrants act more as "job creators" than "job takers" and that non-U.S. born founders play outsized roles in U.S. high-growth entrepreneurship.
