Animal Liberation Simon and Schuster
George Orwell set out 'to make political writing into an art', and to a wide extent this aim shaped the future of English literature – his descriptions of authoritarian regimes helped to form a new vocabulary that is fundamental to understanding totalitarianism. While 1984 and Animal Farm are amongst the most popular classic novels in the English language, this new series of Orwell's essays seeks to bring a wider selection of his writing on politics and literature to a new readership. In Politics and the English Language, the second in the Orwell's Essays series, Orwell takes aim at the language used in politics, which, he says, 'is designed to make lies sound truthful and murder respectable, and to give an appearance of solidity to pure wind'. In an age where the language used in politics is constantly under the microscope, Orwell's Politics and the English Language is just as relevant today, and gives the reader a vital understanding of the tactics at play. The State of the World's Land and Water Resources for Food and Agriculture is FAO's first flagship publication on the global status of land and water resources. It is an 'advocacy' report, to be published every three to five years, and targeted at senior level decision makers in agriculture as well as in other sectors. SOLAW is aimed at sensitizing its target audience on the status of land resources at global and regional levels and FAO's viewpoint on appropriate recommendations for policy formulation. SOLAW focuses on these key dimensions of analysis: (i) quantity, quality of land and water resources, (ii) the rate of use and sustainable management of these resources in the context of relevant socio-economic driving factors and concerns, including food security and poverty, and climate change. This is the first time that a global, baseline status report on land and water resources has been made. It is based on several global spatial databases (e.g. land suitability for agriculture, land use and management, land and water degradation and depletion) for which FAO is the world-recognized data source. Topical and emerging issues on land and water are dealt with in an integrated rather than sectoral manner. The implications of the status and trends are used to advocate remedial interventions which are tailored to major farming systems within different geographic regions.

We live in and from nature, but the way we have evolved of doing this is about to destroy us. Capitalism and its by-products - imperialism, war, neoliberal globalization, racism, poverty and the destruction of community - are all playing a part in the destruction of our ecosystem. Only now are we beginning to realise the depth of the crisis and the kind of transformation which will have to occur to ensure our survival. This second, thoroughly updated, edition of *The Enemy of Nature* speaks to this new environmental awareness. Joel Kovel argues against claims that we can achieve a better environment through the current Western 'way of being'. By suggesting a radical new way forward, a new kind of 'ecosocialism', Joel Kovel offers real hope and vision for a more sustainable future.

The Cambridge Companion to George Orwell Penguin Classics

The unabridged versions of these definitive works are now available together as a highly designed paperback with flaps with a new introduction by Robert Weick. Part of the Knickerbocker Classics series, a modern design makes this timeless book a perfect travel companion. Considered to be one of the most influential political writings, *The Communist Manifesto* is as relevant today as when it was originally published. This pamphlet by the German philosophers Karl Marx and Friedrich Engels, published in 1884 as revolutions were erupting across Europe, discusses class struggles and the problems of a capitalist society. After being exiled to London, Marx published the first part of *Das Kapital*, a theoretical text that argues that capitalism will create greater and greater division in wealth and welfare and ultimately be replaced by a system of common ownership of the means of production. After Marx's death, Engels completed and published the second and third parts from his colleague's notes. The Knickerbocker Classics bring together the essential works of classic authors from around the world in stunning editions to be collected and enjoyed.

Use of Laboratory Animals in Biomedical and Behavioral Research Frontiers Media SA
Scientific experiments using animals have contributed significantly to the improvement of human health. Animal experiments were crucial to the conquest of polio, for example, and they will undoubtedly be one of the keystones in AIDS research. However, some persons believe that the cost to the animals is often high. Authored by a committee of experts from various fields, this book discusses the benefits that have resulted from animal research, the scope of animal research today, the concerns of advocates of animal welfare, and the prospects for finding alternatives to animal use. The authors conclude with specific recommendations for more consistent government action.

Research on animal learning and cognition has so far mainly focused on a few prominent model species, including primates, corvids and dogs. For years, comparative psychologists and ethologists have been suggesting that more animal species should be considered in comparative cognitive science. The abundance and accessibility of livestock offer an opportunity, not merely to extend the comparative approach, but also to deepen our knowledge of the mental lives of farm animals. Such approaches also help to assess the needs of farm animals, in order to improve their welfare. In recent years, scientific interest in different aspects of farm animal psychology, including emotionality, personality and cognitive capacities, has been on the rise, proving that farm animals have sophisticated cognitive skills to comprehend and cope with their environment. As knowledge of how farm animals perceive and interact with their physical and social environments is crucial for animal welfare, the aim of this Research Topic is to promote investigations of farm animal cognitive capacities and their implications for animal welfare-related issues. We have therefore collected original research and review articles, as well as opinion and perspective papers that are distributed among the two hosting magazines, *Frontiers in Veterinary Science* (section Animal Behavior and Welfare) and *Frontiers in Psychology* (section Comparative Psychology). The published articles present state-of-the-art research on farm animal learning and cognition, highlight future perspectives in this research area and pinpoint shortcomings and limitations in interpreting current findings. They offer new cross-disciplinary frameworks (e.g. links between affective states and cognition) and discuss the applied implementation of these findings (e.g. cognitive enrichment). These contributions will increase our understanding of the cognitive mechanisms that enable farm animals to effectively interact with their environment and pave the way for future cross-disciplinary endeavors.

THE STORY: The scene is an isolated house in the woods where a beautiful young woman lives alone. When a young samurai appears she offers him food and shelter, and when he decides to stay on they eventually become lovers. But while fascinated by his benefactress, the samurai cannot shake a superstitious mistrust of her; for all her delicacy and beauty she is also able to perform wonders of cookery, horticulture and even the martial arts (much to his wounded pride). In the end it develops that the woman is suspected of being a witch and the samurai has come to seek glory by killing her. This he ultimately cannot, or will not, do, but neither can he accept her superiority, and so he leaves-a fateful decision which, as it turns out, is made at terrible cost to both of them.

How should we treat non-human animals? In this immensely powerful and influential book (now with a new introduction by Sapiens author Yuval Noah Harari), the renowned moral philosopher Peter Singer addresses this simple question with trenchant, dispassionate reasoning. Accompanied by the disturbing evidence of factory farms and laboratories, his answers triggered the birth of the animal rights movement. 'An extraordinary book which has had extraordinary effects... Widely known as the bible of the animal liberation movement' Independent on Sunday In the decades since this landmark classic first appeared, some public attitudes to animals may have changed but our

continued abuse of animals in factory farms and as tools for research shows that the underlying ideas Singer exposes as ethically indefensible are still dominating the way we treat animals. As Yuval Harari's brilliantly argued introduction makes clear, this book is as relevant now as the day it was written.

A wonderful selection of Orwell's finest narrative essays George Orwell was first and foremost an essayist. From his earliest published article in 1928 to his untimely death in 1950, he produced an extraordinary array of short non-fiction that reflected - and illuminated - the fraught times in which he lived and wrote. 'As soon as he began to write something,' comments George Packer in his foreword to this new two-volume collection, 'it was as natural for Orwell to propose, generalize, qualify, argue, judge - in short, to think - as it was for Yeats to versify or Dickens to invent.' This collection charts Orwell's development as a master of the narrative-essay form and unites classics such as 'Shooting an Elephant' with lesser-known journalism and passages from his wartime diary. Whether detailing the horrors of Orwell's boyhood in an English boarding school or bringing to life the sights, sounds, and smells of the Spanish Civil War, these narrative essays weave together the personal and the political in an unmistakable style that is at once plain-spoken and brilliantly complex.
