Despite the increasing concern for the issue of respect for persons displayed over the last decades by political philosophers, human-right thinkers, social and ethical theorists, a comprehensive treatment of the problem at stake from a historical-philosophical perspective is conspicuously absent. The present collection of essays aims to contribute to the fulfillment of this gap by offering a reconstruction of the seminal passages in the history of philosophy which testify to the evolution of the idea of respect for persons and the rich array of conceptual specifications that such an idea acquires across the centuries. By analysis of pivotal texts of ancient and modern contemporary philosophy, the volume will try to offer an articulated account of respect which, starting from its primeval connection with the search for esteem and the pursuit of human excellence, gradually evolves towards the recognition of the political status of each citizen and culminates into a true politics of human rights. Bringing together the expertise of classicists and scholars specialized in modern and contemporary philosophy, the volume is especially intended for scholars working in the fields of the history of philosophy, ethical and political theory.

Respect for Nature defends a biocentric theory of environmental

ethics. Without making claims for the moral rights of plants and animals, Paul Taylor offers a reasoned alternative to the prevailing anthropocentric view, according to which the natural environment and its wild biotic communities are valued only as objects for human use or enjoyment.

"Many people say that it is the intellect which makes a great scientist. They are wrong: it is character."-Albert Einstein Integrity in Scientific Research attempts to define and describe those elements that encourage individuals involved with scientific research to act with integrity. Recognizing the inconsistency of human behavior, it stresses the important role that research institutions play in providing an integrity-rich environment, citing the need for institutions to provide staff with training and education, policies and procedures, and tools and support systems. It identifies practices that characterize integrity in such areas as peer review and research on human subjects and weighs the strengths and limitations of self-evaluation efforts by these institutions. In addition, it details an approach to promoting integrity during the education of researchers, including how to develop an effective curriculum. Providing a framework for research and educational institutions, this important book will be essential for anyone concerned about ethics in the scientific community.

This is true story about real people is set in Edinburgh City and Dundee, where a petite Scottish Lassie called Rosie Gilmour, mother to Finlay Sinclair, receives news of the death of her son - who tragically has taken his own life by hanging. Rosie pretends her son is still alive by talking to him, for that takes away the unbearable pain of her loss. But once she begins to face up to the fact that Finlay is not coming back, her conversations become more of a challenge than she can handle. When memories of her past are triggered by everyday life events, they take her mind back and forth in time - back to her own childhood days in 1960, when she flirted with the fairground boys, and to the day she gave birth to Finlay - "ME LADDIE". Rosie's Scottish accent becomes more apparent whenever her emotions are heightened and she begins to recite poetry. She goes on to reveal doubts about her own self-worth and how she re-unites her role as mother - a role she had denied herself for seven years prior to Finlay's death. Rosie learns how to forgive herself and how to accept her loss with using practical coping strategies that sometimes but not always work for her. Many voices of different natures and walks of life appear in Rosie's, story with each one offering a part of their own belief to try and console her in her misery - except that she turns her back on any advice or support offered. Rosie is convinced that she can cope with her loss on her own and "needs no help from anyone, thank you" - until a sweet, gentle, soft-spoken voice begins to travel with her throughout her ordeal, leaving her no other choice but to listen. Eventually moving to the countryside in Angus, Rosie finds the isolation gives her life a new meaning offering her the opportunity to re-value her belief's about her own self values and decides the time has come to give her son a memorial service and invite a chosen few dance companions whom she met on a regular basis in Edinburgh to

honour this day. Rosie begins to accept she will never be the same person she once had been and shall never be again, believing now her journey through grief taught her many lessons making her a stronger and better person than she imagined she could ever be. This open access book offers insights into the development of the ground-breaking Global Code of Conduct for Research in Resource-Poor Settings (GCC) and the San Code of Research Ethics. Using a new, intuitive moral framework predicated on fairness, respect, care and honesty, both codes target ethics dumping – the export of unethical research practices from a high-income setting to a lower- or middle-income setting. The book is a rich resource of information and argument for any research stakeholder who opposes double standards in research. It will be indispensable for applicants to European Union framework programmes, as the GCC is now a mandatory reference document for EU funding.

After a decade of educational reforms, *The Challenge to Care in Schools* is even more relevant now than when it was first published. In her new Introduction, Nel Noddings revisits her seminal book and places care as central to current debates on standardization, accountability, privatization, and the continuous struggle between traditional and progressive methods of education. Rather than forcing one side to yield to the other, this book advocates an alternative, “responsive system” that will allow the best ideas to flourish. In the Second Edition, Noddings once again envisions a school system built on the idea that different people have different strengths, and that these strengths should be cultivated in an environment of caring, not of competition. She suggests that if we make the responsiveness characteristic of caring more basic than accountability, we can accommodate both traditional and progressive preferences in one school system to the benefit of all . . . especially the children. Chapters address the practical and theoretical questions involved in organizing traditional and nontraditional areas of study around themes of care. Introductory chapters focus on caring in general and on the problems of liberal education, while the final chapter offers sound advice for implementing a caring curriculum in our schools. Praise for the First Edition! "A welcome addition to the often fragmented discussion of what children need and what school and education should be." —Harvard Educational Review "I recommend this book to all concerned about education, personally and/or professionally." —Journal of Moral Education "In the morass of school reform that calls for such changes as national standards, improved assessments, and new ways of organizing schooling, Noddings provides lucid thinking about the priorities we ought to consider." —Teachers College Record

*Rural Rides* is the book for which the English journalist, agriculturist and political reformer William Cobbett is best known. At the time of writing *Rural Rides*, in the early 1820s, Cobbett was a radical anti-Corn Law campaigner. He embarked on a series of journeys by horseback through the countryside of Southeast England and the English Midlands. He wrote down what he saw from the points of view both of a farmer and a social reformer. The result documents the early 19th-century countryside and its people as well as giving free vent to Cobbett's opinions

At a time when lesbian, gay, bisexual, and transgender individuals—often referred to under the umbrella acronym LGBT—are becoming more visible in society and more socially acknowledged, clinicians and researchers are faced with incomplete information about their health status. While LGBT populations often are combined as a single entity for research and advocacy purposes, each is a distinct population group with its own specific health needs. Furthermore, the experiences of LGBT individuals are not uniform and are shaped by factors of race, ethnicity, socioeconomic status, geographical location, and age, any of which can have an effect on health-related concerns and needs. *The Health of Lesbian, Gay, Bisexual, and Transgender People* assesses the state of science on the health status of LGBT populations, identifies research gaps and opportunities, and outlines a research agenda for the National Institute of Health. The report examines the health status of these populations in three life stages: childhood and adolescence, early/middle adulthood, and later adulthood. At each life stage, the committee studied mental health, physical health, risks and protective factors, health services, and contextual influences. To advance understanding of the health needs of all LGBT individuals, the report finds that researchers need more data about the demographics of these populations, improved methods for collecting and analyzing data, and an increased participation of sexual

and gender minorities in research. *The Health of Lesbian, Gay, Bisexual, and Transgender People* is a valuable resource for policymakers, federal agencies including the National Institute of Health (NIH), LGBT advocacy groups, clinicians, and service providers.

This book combines chapters written by leading social psychologists and economists, illuminating the developing trends in explaining and understanding economic behavior in a social world. It provides insights from both fields, communicated by eloquent scholars, and demonstrates through recent research and theory how economic behaviors may be more effectively examined using a combination of both fields. *Social Psychology and Economics* comes at a particularly fitting time, as a psychological approach to economics has begun to flourish in recent years, and papers exploring the intersection of these two disciplines have appeared in peer-reviewed journals, opening a dynamic dialogue between previously separated fields. This volume, the first in the Society for Judgment and Decision Making Series since acquired by Psychology Press, includes chapters by economists and psychologists. It addresses a variety of economic phenomena within a social context, such as scarcity and materialism, emphasizing the importance of integrating social psychology and economics. *Social Psychology and Economics* is arranged in seven parts that discuss: an introduction to the topic; preferences, utility, and choice; emotions; reciprocity, cooperation, and fairness; social distance; challenges to social psychology and economics; and collaborative reflections and projections. The market for this book is students, researchers, and professionals in the disciplines of economics, psychology, business, and behavioral decision making. Graduate students and upper-level undergraduate students will consider it a useful supplemental text.

Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. *Parenting Matters* identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for

the future of parenting policy, research, and practice in the United States.

A practical and engaging guide to the art of teaching history Well-grounded in scholarly literature and practical experience, *Teaching History* offers an instructors' guide for developing and teaching classroom history. Written in the author's engaging (and often humorous) style, the book discusses the challenges teachers encounter, explores effective teaching strategies, and offers insight for managing burgeoning technologies. William Caferro presents an assessment of the current debates on the study of history in a broad historical context and evaluates the changing role of the discipline in our increasingly globalized world. *Teaching History* reveals that the valuable skills of teaching are highly transferable. It stresses the importance of careful organization as well as the advantages of combining research agendas with teaching agendas. Inspired by the Scholarship of Teaching and Learning movement, the book encourages careful reflection on teaching methods and stresses the importance of applying various approaches to promote active learning. Drawing on the author's experience as an instructor at the high school and university levels, *Teaching History*: Contains an authoritative and humorous look at the profession and the strategies and techniques of teaching history Incorporates a review of the current teaching practice in terms of previous methods, examining nineteenth and twentieth century debates and strategies Includes a discussion of the use of technology in the history classroom, from the advent of course management (Blackboard) systems to today's digital resources Covers techniques for teaching the history of any nation not only American history Written for graduate and undergraduate students of history teaching and methods, historiography, history skills, and education, *Teaching History* is a comprehensive book that explores the strategies, challenges, and changes that have occurred in the profession.
