Today's researchers have access to more information than ever before. Yet the new material is both overwhelming in quantity and variable in quality. How can scholars survive these twin problems and produce groundbreaking research using the physical and electronic resources available in the modern university research library? In *Digital Paper*, Andrew Abbott provides some much-needed answers to that question. Abbott tells what every senior researcher knows: that research is not a mechanical, linear process, but a thoughtful and adventurous journey through a nonlinear world. He breaks library research down into seven basic and simultaneous tasks: design, search, scanning/browsing, reading, analyzing, filing, and writing. He moves the reader through the phases of research, from confusion to organization, from vague idea to polished result. He teaches how to evaluate data and prior research; how to follow a trail to elusive treasures; how to organize a project; when to start over; when to ask for help. He shows how an understanding of scholarly values, a commitment to hard work, and the flexibility to change direction combine to enable the researcher to turn a daunting mass of found material into an effective paper or thesis. More than a mere how-to manual, Abbott's guidebook helps teach good habits for acquiring knowledge, the foundation of knowledge worth knowing. Those looking for ten easy steps to a perfect paper may want to look elsewhere. But serious scholars, who want their work to stand the test of time, will appreciate Abbott's unique, forthright approach and relish every page of *Digital Paper*.

Educating for Peace and Human Rights John Wiley & Sons

Over the past five decades, both peace education and human rights education have emerged distinctly and separately as global fields of scholarship and practice. Promoted through multiple efforts (the United Nations, civil society, grassroots educators), both of these fields consider content, processes, and educational structures that seek to dismantle various forms of violence, as well as move towards cultures of peace, justice and human rights. *Educating for Peace and Human Rights Education* introduces students and educators to the challenges and possibilities of implementing peace and human rights education in diverse global sites. The book untangles the core concepts that define both fields, unpacking their histories and conceptual foundations, and presents models and key research findings to help consider their intersections, convergences, and divergences. Including an annotated bibliography, the book sets forth a comprehensive research agenda, allowing emerging and seasoned scholars the opportunity to situate their research in conversation with the global fields of peace and human rights education.

"Advanced Statistics in Research: Reading, Understanding, and Writing Up Data Analysis Results" is the simple, nontechnical introduction to the most complex multivariate statistics presented in empirical research articles.

"wwwStatsInResearch.com," is a companion website that provides free sample chapters, exercises, and PowerPoint slides for students and teachers. A free 600-item test bank is available to instructors. "Advanced Statistics in Research" does not show how to "perform" statistical procedures--it shows how to read, understand, and interpret them, as they are typically presented in journal articles and research reports. It demystifies the sophisticated statistics that stop most readers cold:

multiple regression, logistic regression, discriminant analysis, ANOVA, ANCOVA, MANOVA, factor analysis, path analysis, structural equation modeling, meta-analysis--and more. "Advanced Statistics in Research" assumes that you have never had a course in statistics. It begins at the beginning, with research design, central tendency, variability, z scores, and the normal curve. You will learn (or re-learn) the big-three results that are common to most procedures: statistical significance, confidence intervals, and effect size. Step-by-step, each chapter gently builds on earlier concepts. Matrix algebra is avoided, and complex topics are explained using simple, easy-to-understand examples. "Need help writing up your results?" Advanced Statistics in Research shows how data-analysis results can be summarized in text, tables, and figures according to APA format. You will see how to present the basics (e.g., means and standard deviations) as well as the advanced (e.g., factor patterns, post-hoc tests, path models, and more). "Advanced Statistics in Research" is appropriate as a textbook for graduate students and upper-level undergraduates (see supplementary materials at StatsInResearch.com). It also serves as a handy shelf reference for investigators and all consumers of research.

Academic Search Engines: intends to run through the current panorama of the academic search engines through a quantitative approach that analyses the reliability and consistence of these services. The objective is to describe the main characteristics of these engines, to highlight their advantages and drawbacks, and to discuss the implications of these new products in the future of scientific communication and their impact on the research measurement and evaluation. In short, Academic Search Engines presents a summary view of the new challenges that the Web set to the scientific activity through the most novel and innovative searching services available on the Web. This is the first approach to analyze search engines exclusively addressed to the research community in an integrative handbook. The novelty, expectation and usefulness of many of these services justify their analysis. This book is not merely a description of the web functionalities of these services; it is a scientific review of the most outstanding characteristics of each platform, discussing their significance to the scholarly communication and research evaluation. This book introduces an original methodology based on a quantitative analysis of the covered data through the extensive use of crawlers and harvesters which allow going in depth into how these engines are working. Beside of this, a detailed descriptive review of their functionalities and a critical discussion about their use for scientific community is displayed.

Web Search: Public Searching of the Web Shadow Finch Media LLC

Web Search: Public Searching of the Web, co-authored by Drs. Amanda Spink and Bernard J. Jansen, is one of the first manuscripts that address the human - system interaction of Web searching in a thorough and complete manner. The authors provide an examination of Web searching from multiple levels of analysis, from theoretical overview to detailed study of term usage, and integrate these different levels of analysis into a coherent picture of how people locate information on the Web using search engines. Drawing primarily on their own research and work in the field, the authors present the temporal changes in, the growth of, and the stability of how people interact with Web search engines. Drs. Spink and Jansen present results from an analysis of multiple search engine data sets over a six year period, giving a firsthand account of the emergence of Web searching. They also compare and contrast their findings to the results of other researchers in the field, providing a valuable bibliographic resource. This research is directly relevant to those interested in providing information or services on the Web, along with those who research and study the Web as an information resource. Graduate students, academic and corporate researchers, search engine designers, information architects, and search engine optimizers will find the book of particular benefit.
