Moral Resilience, Second Edition National Academies Press

Across a variety of disciplines, data and statistics form the backbone of knowledge.

To ensure the reliability and validity of data, appropriate measures must be taken in conducting studies and reporting findings.

Research Methods: Concepts, Methodologies, Tools, and Applications compiles chapters on key considerations in the management, development, and distribution of data. With its focus on both fundamental concepts and advanced topics, this multi-volume reference work will be a valuable addition to researchers, scholars, and students of science, mathematics, and engineering.

This book investigates the close connections between engineering and war, broadly understood, and the conceptual and structural barriers that face those who would seek to loosen those connections. It shows how military institutions and interests have long influenced engineering education, research, and practice and how they continue to shape the field in the present. The book also provides a generalized framework for responding to these influences useful to students and scholars of engineering, as well as reflective practitioners. The analysis draws on philosophy, history, critical theory, and technology studies to understand the connections between engineering and war and how they shape our very understandings of what engineering is and what it might be. After providing a review of diverse dimensions of engineering itself, the analysis shifts to different dimensions of the connections between engineering and war. First, it considers the ethics of war

generally and then explores questions of integrity for engineering practitioners facing career decisions relating to war. Next, it considers the historical rise of the military-industrial-academic complex, especially from World War II to the present. Finally, it considers a range of responses to the militarization of engineering from those who seek to unsettle the status quo. Only by confronting the ethical, historical, and political consequences of engineering for warfare, this book argues, can engineering be sensibly reimagined.

Introduction to Nursing Research: Incorporating Evidence-Based Practice, Third Edition guides aspiring nurses on how to incorporate research into their

future work and bring evidence-based practices to the bedside. This is an essential resource for nursing educators wishing to familiarize their students with the tools, processes, and clinical value of nursing research and its relevance to everyday practice. Each chapter in this Third Edition has been updated, with new information on evidence, translational research, and quality improvement issues. Also featured is information on the Institute of Medicine's (IOM) Future of Nursing report. Defense Manpower Commission Staff Studies and Supporting Papers IGI Global Professionals, it is said, have no use for simple lists of virtues and vices. The complexities and constraints of professional roles create peculiar moral demands on the people who occupy them, and traits that are vices

in ordinary life are praised as virtues in the context of professional roles. Should this disturb us, or is it naive to presume that things should be otherwise? Taking medical and legal practice as key examples, Justin Oakley and Dean Cocking develop a rigorous articulation and defence of virtue ethics, contrasting it with other types of character-based ethical theories and showing that it offers a promising new approach to the ethics of professional roles. They provide insights into the central notions of professional detachment, professional integrity, and moral character in professional life, and demonstrate how a virtue-based approach can help us better understand what ethical professional-client relationships would be like.

One of the hallmarks of a true profession is its ability to assess and regulate itself,

especially with respect to adherence to its foundational ethos. Such self-examination is difficult and often causes discomfort within the profession. Nonetheless, it is absolutely necessary to enable members of the profession to render the service for which the profession exists. U.S. military professionals have never shied away from this responsibility, and they do not today, as evidenced by this riveting monograph. Discussing dishonesty in the Army profession is a topic that will undoubtedly make many readers uneasy. It is, however, a concern that must be

addressed to better the Army profession. Through extensive discussions with officers and thorough and sound analysis, Drs. Leonard Wong and Stephen Gerras make a compelling argument for the Army to introspectively examine how it might be inadvertently encouraging the very behavior it deems unacceptable.

The former superintendent at West Point and a psychologist explain why all successful leaders rely on a foundation of strong character. Among the most successful leaders throughout history—from Abe Lincoln to Rosa Parks, Mahatma Gandhi to Susan B. Anthony, Martin Luther King, Jr. to Nelson Mandela—some were brilliant mathematicians and economists, others were creative visionaries, still others were masterful at strategic planning. Their mastery of their field wasn't the secret to their highly effective leadership. All of their skill, grit, resilience, charisma, and courage emanated from one thing: their strength of character. Character—the moral values and habits of an individual—is in the

spotlight now more than perhaps at any other point in modern history. Politicians distort facts. Corporations cheat customers and investors. Athletes are caught using illegal supplements. In addition to harming our culture at large, these failures of character have a profound and undermining impact on leadership. The authors of this book are experts on the value of character, its correlation with successful leadership, and how to build it in individuals and prospective leaders. General Robert L. Caslen, Jr. served the US Army for over 43 years and served as Superintendent at the US Military Academy at West Point. Psychologist Dr. Michael D. Matthews is a Professor of Engineering Psychology at West Point who has focused on the psychology of character for years. Together they witnessed firsthand that raw talent is not enough to stand on its own; successful leadership relies on the critical foundation of a strong character. In *The Character Edge* they leverage their perspectives to offer an empowering, story-driven argument—backed by the latest scientific research—that character is vital to success. They give readers the tools to build and sustain character in themselves and their organizations by testing readers' strengths of the gut, head and heart and teaching how to build trust and nurture the seeds of character.

Researching the Military focuses on the experiences of researchers who study the military around the world. It explores the historical, social, institutional and personal factors that frame research and scrutinize the way knowledge in this area impacts society and policy. More than merely analyzing research experiences (yet necessarily including them), it is also about the experiences of researchers, their position with regard to the object of their studies, the institutional context

where they work and the way their research impacts the academic and policy-making fields in the respective countries. The common theme to the various chapters is reflexivity, a conscious effort at addressing the conditions of research and the position of the researcher and the research participants in that interface. By collecting diverse experiences of researchers from across the world, this volume aims to enhance reflexivity in the field of military studies and to encourage the exchange of

knowledge between the academic field and the military arena. This book will be of much interest to students of military studies, research methods, sociology, social anthropology and security studies, in general.

"Suffering is an unavoidable reality in health care. Not only are patients and families suffering but also the clinicians who care for them. Commonly the suffering experienced by clinicians is

moral in nature, reflecting the increasing complexity of health care, their roles within it, and the expanding range of available interventions. Moral suffering is the anguish experienced in response to various forms of moral adversity including moral harms, wrongs or failures, or unrelieved moral stress. Confronting moral adversity challenges clinicians' integrity: the inner harmony that arises when their essential values and commitments are aligned with their choices and actions. The

most studied response to moral adversity is moral distress. The sources and sequelae of moral distress, one type of moral suffering, have been documented among clinicians across specialties. Recent interest has expanded to include a more corrosive form of moral suffering, moral injury. Moral resilience, the capacity to restore or sustain integrity in response to moral adversity, offers a path designing individual and system solutions to address moral suffering. It encompasses capacities aimed at developing self-regulation and self-awareness, buoyancy, moral efficacy, self-stewardship and ultimately personal and relational integrity. Moral resilience has been shown to be a protective resource that reduces the detrimental impact of moral suffering. Clinicians and healthcare organizations must work together to transform moral suffering by cultivating the individual capacities for moral resilience and designing a new architecture to support ethical practice. Used

worldwide for scalable and sustainable change, the Conscious Full Spectrum Response, offers a method to solve problems to support integrity, shift patterns that undermine moral resilience and ethical practice, and source the inner potential of clinicians and leaders to produce meaningful and sustainable results that benefit all"--

programmes being a rarity in most countries' armed forces, there is a growing importance for servicemen to undergo additional military ethics training. But how do we ensure that soldiers learn the right lessons from it? Furthermore, how can we achieve a uniformity of approach? The current lack of uniformity about what constitutes ethical behaviour and how troops should be educated in it is potentially a cause for serious alarm. This book advances knowledge and understanding of the issues

associated with this subject by bringing together experts from around the world to analyze the content, mode of instruction, theoretical underpinnings, and the effect of cultural and national differences within current ethics programmes. It also explores whether such programmes are best run by military officers, chaplains or academic philosophers, and reflects whether it is feasible to develop common principles and approaches for the armed forces of all Western countries. This is an

invaluable volume for military academies and staff colleges to enhance understanding of a matter which requires much further thought and which is becoming a vital force in influencing outcomes on the battlefields of the twenty-first century. The book will primarily be of interest to military officers and others directly involved in ethics education in the military, as well as to philosophers and students of military affairs. **Fostering Integrity in Research** Academic Conferences Limited

exploration of an issue bedeviling our cultural landscape—plagiarism in literature, academia, music, art, and film—by one of our most influential and controversial legal scholars. Best-selling novelists J. K. Rowling and Dan Brown, popular historians Doris Kearns Goodwin and Stephen Ambrose, Harvard law professor Charles Ogletree, first novelist Kaavya Viswanathan: all have rightly or wrongly been accused of plagiarism—theft of intellectual property—provoking widespread media punditry. But what exactly is plagiarism? How has the meaning of this

notoriously ambiguous term changed over time as a consequence of historical and cultural transformations? Is the practice on the rise, or just more easily detectable by technological advances? How does the current market for expressive goods inform our own understanding of plagiarism? Is there really such a thing as “cryptomnesia,” the unconscious, unintentional appropriation of another’s work? What are the mysterious motives and curious excuses of plagiarists? What forms of punishment and absolution does this “sin” elicit? What is the good in

certain types of plagiarism? High-quality nursing care is essential to obtaining favorable patient outcomes, no less so in military than in civilian settings. Military nursing research focuses on enhancing health care delivery systems and processes to improve clinical outcomes, to advance the practice of military nursing in support of mission readiness and deployment,

and to improve the health status and quality of life of military personnel and their beneficiaries. This volume reviews the military nursing research program of the TriService Nursing Research Program in terms of its management, funding, allocation of resources, and identification of program goals. The book also contains the results of that study and the committee's recommendations.

An easily accessible resource that showcases the links between using documented primary sources and gaining a more nuanced understanding of military history. Primary source analysis is a valuable tool that teaches students how historians utilize documents and interpret evidence from the

past. This four-volume reference traces key decisions in U.S. military history—from the Revolutionary War through the 21st-century conflicts in Afghanistan and Iraq—by examining documents relating to military strategy and national policy judgments by U.S. military and political leaders. A comprehensive introductory essay provides readers with the context necessary to understand the relationship between diplomatic documents, military correspondence, and other documentation related to events that shaped warfare, diplomacy, and military strategy. Once the

stage is set, the work covers 14 conflicts that are significant to U.S. history. Treatment of each of the conflicts begins with a historical overview followed by a chronology and approximately 30 primary source documents presented in chronological order. Each document is accompanied by a description and annotations and by an analysis that highlights its importance to the event or topic under discussion. Designed for secondary school and college students, the work will be exceptionally valuable to teachers who will appreciate the ready-made lessons that fit

directly into core curriculum standards.

This is open access volume of the NL ARMS offers an interdisciplinary view on the domain of Compliance and Integrity in International Military Trade (CIIMT), integrating defence economics, international law, arms export control frameworks and policies, information management, organizational sciences and ethics. Although, in academia, and from an interdisciplinary perspective, CIIMT constitutes a relatively novel research domain, across private and public defence-

related sectors, the subject evokes high levels of attention and interest, instigating a need for critical thinking, reflection and creativity to address ensuing multifaceted issues and problems. The Faculty of Military Sciences at the Netherlands Defence Academy extends an in-house MSc programme on CIIMT, which, by integrating practice-based and scientific-based knowledge, aims to contribute to this need. The MSc programme on CIIMT is concerned with exploring, analysing, understanding, explaining, controlling and improving the military dimension in international military trade. More particularly, CIIMT studies managerial questions regarding strategic trade control of military

and dual-use goods and services. CIIMT ties in with the Netherlands Defence Academy's vision on scientific education, embedded in the reflective practitioners' paradigm uniting both management and leadership skills needed to decide and operate in high-tension and high-risk knowledge intensive environments. The Faculty of Military Sciences uses the reflective practitioners' paradigm to refer to critical thinking, reflection and Bildung that characterize its thinking doers, the so-called Thinking Soldiers, either at the academic Bachelor's or Master's level. In view of the complexity of the international trade regarding military and dual-use goods and services, the rapid

evolution of strategic trade control and frameworks, and its importance to procurement processes, defence organizations require innovative thinking doers, who, based on an in-depth understanding, from an interdisciplinary perspective can be expected to find - and take responsibility for - creative solutions to problems. NL ARMS 2021 comprises, amongst others, contributions from students and lecturers partaking in this programme. All the editors are affiliated with the Faculty of Military Sciences of the Netherlands Defence Academy in Breda, The Netherlands.
