Virtual Worlds 2000 is the second in a series of international scientific conferences on virtual worlds held at the International Institute of Multimedia in Paris La Défense (Pôle Universitaire Léonard de Vinci). The term "virtual worlds" generally refers to

---

virtual reality applications or experiences. We extend the use of these terms to describe experiments that deal with the idea of synthesizing digital worlds on computers. Thus, virtual worlds could be defined as the study of computer programs that implement digital worlds. Constructing such complex artificial worlds seems to be extremely difficult to do in any sort of complete and realistic manner. Such a new discipline must benefit from a large amount of work in various fields: virtual reality and advanced computer graphics, artificial life and evolutionary computation, simulation of physical systems, and more. Whereas virtual reality has largely concerned itself with the design of 3D immersive graphical spaces, and artificial life with the simulation of living organisms, the field of virtual worlds, is concerned with the synthesis of

digital universes considered as wholes, with their own "physical" and "biological" laws.

Semi-active Suspension

Control provides an overview

of vehicle ride control

employing smart semi-active

systems are able to tune the

amount of damping in

response to measured vehicle-

analysed from the

perspectives of mechatronics

**Nurse Genee Jones and the Texas Baby Murders**

"O'Reilly Media, Inc."

The true story of a killer nurse whose crimes were hidden by a hospital for years. It's 1980, and Genee Jones is working the 3 to 11 PM shift in the pediatric ICU in San Antonio's county hospital. As the weeks go by, infants under her care begin experiencing unexpected complications—and dying—in alarming numbers, prompting rumors that there is a murderer among the staff. Her eight-hour shift would come to be called "the death shift." This strange epidemic would continue unabated for more than a year, before Jones is quietly sent off—with a good recommendation—to a rural pediatric clinic. There, eight children under her care mysteriously stopped breathing—and a 15-month-old baby girl died. In May 1984, Jones was finally arrested, leading to a trial that revealed not only her deeply disturbed mind and a willingness to kill, but a desire to play "God" with the lives of the children under her care. More shocking still was that the hospital had shredded records and remained silent about Jones' horrific deeds, obscuring the full extent of

her spree and prompting grieving parents to ask: Why? Elkind chronicles Jones' rampage, her trials, and the chilling aftermath of one of the most horrific crimes in America, and turns his piercing gaze onto those responsible for its cover-up. It is a tale with special relevance today, as prosecutors, distraught parents, and victims' advocates struggle to keep Jones behind bars. "A horrifying true-life medical thriller..."—Publishers Weekly "Gripping...A remarkable journalistic achievement!"—Newsweek "Murder, madness, and medicine...superb!"—Library Journal "Shocking...true crime reporting at its most compelling."—Booklist
