MCQs are a vital support to medical and science students, both to measure developing knowledge in a discipline and to build confidence for examinations. Many undergraduate and postgraduate exams use MCQs as the preferred method of testing. Written with the student in mind, this book supports the new medical curricula. It contains over 3000 novel and innovative questions which relate physiological knowledge to the clinical environment. The questions demand an integrative approach across related subjects and cover all the major aspects of physiology varying from quite basic material multisystem problems involving biochemistry, pathophysiology, pharmacology, and

therapeutics. Using fully up-to-date, material, the questions vary in difficulty to suit medical students in their undergraduate years through to Membership Fellowship or Board level exams. Full answers are given to aid self-directed learning which is increasingly important in the changing curricula. Special areas of interest to trainee surgeons, physicians, anaesthetists, psychiatrists, and dentists are catered for without detracting from simple information common to all medical and paramedical disciplines. Those sitting for Board Exams in the USA and Canada will also find the text stimulating and informative. This is because much of the material is based on personal experience in a broad range of examinations and on information readily available in the major textbooks and journals used on both sides of the Atlantic. Linked to the new Oxford Core

Texts series. The Oxford Core Texts: The Oxford Core Texts provide concise, yet comprehensive coverage of a range of essential topics in the medical curriculum. Written and tested in consultation with students, each book offers a clear and accessible account of the core material, supported by case studies and clinical examples. Efforts have been made throughout to include the key information which the reader will need to prepare for successful clinical practice - making these texts an ideal resource for all stages of the medical course beyond.

Multiple Choice Questions in Anatomy and Neurobiology for Undergraduates is a collection of multiple choice questions in anatomy and neurobiology for undergraduate students. Questions are grouped for each visceral system and the nervous system. In the case of the body framework (including peripheral nerves and blood vessels), however, a regional grouping is used. Each question has the corresponding correct answer. This book is comprised of eight chapters covering the upper limb, head and neck, musculoskeletal trunk, lower limb, cardiovascular and respiratory systems, gastrointestinal and genito-urinary systems, and neurobiology. Each chapter

contains three types of questions designed to test knowledge in different ways. Type A items involve choosing a single correct answer from five available choices. Type L items are used to elicit information on the cause-effect relationship between sets of data. Type E items call for the perception of one or more correct responses among four alternatives, and the responses may be grouped in five different ways. Most questions are also accompanied by an indication of the percentage of students who obtained the correct answer on occasions of previous settings and by a biserial correlation coefficient (r biserial), indicative of the capacity of the question to distinguish between more able and less able students. This monograph is primarily intended for medical undergraduates and will also be useful to academic anatomists building up their own question banks.
