The Essentials Butterworth-Heinemann

From acute respiratory diseases to chronic lung conditions, pulmonology is a vital area of

clinical medicine. Due to a wide array of respiratory diseases, clinical presentation of pulmonary conditions can be complex and oftentimes challenging. In addition to recognizing common characteristics of lung diseases, identifying unusual clinical presentation of pulmonary conditions remains an important educational experience. This concise and easy-to-read title provides that experience in practical context, using a case-based system of learning where a unique case is presented and discussed and questions are provided to challenge the learner and reinforce the transmission of knowledge. Challenging Cases in Pulmonology is not an exhaustive review but rather focuses on common and important problems, with emphasis on evaluation and treatment. The book offers 16 chapters consisting of two or more cases followed by five to ten multiple choice questions. A valuable resource for pulmonologists, allergists, primary care physicians, internal medicine, fellows in allergy and pulmonology, and residents in training, this practical title will also be of interest to nurses, physician assistants, and medical students studying pulmonology. Challenging Cases in Pulmonology complements two previously published case-based titles edited by Dr. Mahmoudi: Challenging Cases in Allergy and Immunology (Humana Press, 2009) and Challenging Cases in Allergic and Immunologic Diseases of the Skin (Springer, 2010).

Examination and Board Review John Wiley & Sons

This book provides two thousand multiple choice questions on human anatomy and physiology, separated into 40 categories. The answer to each question is accompanied by an explanation. Each category has an introduction to set the scene for the questions to come. However not all possible information is provided within these Introductions, so an Anatomy and Physiology textbook is an indispensable aid to understanding the answers. The questions have been used in examinations for undergraduate introductory courses and as such reflect the focus of these particular courses and are pitched at the level to challenge students that are beginning their training in anatomy and physiology. The questions and answer combinations are to be used both by teachers, to select questions for their next examinations, and by students, when studying for an upcoming test. Students enrolled in the courses for which these questions were written include nursing, midwifery, paramedic, physiotherapy, occupational therapy, nutrition & dietetics, health sciences and students taking an anatomy and physiology course as an elective.

This book/CD-ROM package covers key information that will help novice and experienced nurses gain competence in assessing the respiratory system. The text begins with an overview of anatomy and physiology concepts, then outlines steps of clinical assessment and describes how normal breath sounds are produced, what they sound like, and how they are classified. Breath sounds are correlated with common physiological conditions, linking material to ambulatory care and bedside practice. Margin tips and quizzes are included, and the CD-ROM contains examples of breath sounds. Annotation : 2004 Book News, Inc., Portland, OR (booknews.com)--[source inconnue].

A revision book for the One Stop Doc revision series which covers the key facts for the Respiratory module in the form of Short Answer Questions, Multiple Choice Questions, Extended Matching Questions, and Problem-based Questions. Illustrated with simple, easily-reproduced line diagrams, this book will provide all the necessary information for exam success. The unique 'teaching feature' of each volume in the series is the grouping of different question types to cover a specific key topic which is explained in its entirety on the facing page, giving each double-page spread a focus on an aspect of core knowledge that can thereby be revised on its own or as part of a larger programme.
