This second edition provides 2400 multiple choice questions on human anatomy and physiology, and some physical science, separated into 40 categories. The answer to each question is accompanied by an explanation. Each category has an

introduction to set the scene for the questions to come. However, not all possible information is provided within these Introductions, so an Anatomy and Physiology textbook is an indispensable aid to understanding the answers. The questions have been used in end-of-semester examinations for undergraduate anatomy and physiology courses and as such reflect the focus of these particular courses and are pitched at this level to challenge students that are beginning their training in anatomy and physiology. The question and answer combinations are intended for use by teachers, to select questions for their next examinations, and by students, when studying for an upcoming test. Students enrolled in the courses for which these questions were written include nursing, midwifery, paramedic, physiotherapy, occupational therapy, nutrition and dietetics, health sciences, exercise science, and students taking an anatomy and physiology course as an elective.

Anatomy and Neurobiology for

Undergraduates is a collection of

multiple choice questions in

anatomy and neurobiology for

undergraduate students. Questions

are grouped for each visceral

system and the nervous system. In

the case of the body framework

(including peripheral nerves and

blood vessels), however, a regional

grouping is used. Each question has

the corresponding correct answer.

This book is comprised of eight

chapters covering the upper limb,

head and neck, musculoskeletal

trunk, lower limb, cardiovascular

and respiratory systems,

gastrointestinal and genito-urinary

systems, and neurobiology. Each

chapter contains three types of

questions designed to test

knowledge in different ways. Type

A items involve choosing a single

correct answer from five available

choices. Type L items are used to

elicit information on the cause-

effect relationship between sets of data. Type E items call for the perception of one or more correct responses among four alternatives, and the responses may be grouped in five different ways. Most questions are also accompanied by an indication of the percentage of students who obtained the correct answer on occasions of previous settings and by a biserial correlation coefficient (r biserial), indicative of the capacity of the question to distinguish between more able and less able students. This monograph is primarily intended for medical undergraduates and will also be useful to academic anatomists building up their own question banks.
