Unlock the healing power of cannabis medicine and discover the cutting-edge science behind its remarkable impact on human health. Millions of people around the world are healing illnesses with cannabis. Nonetheless, many physicians remain reluctant to discuss cannabis medicine with their patients. And with so much conflicting misinformation from unreliable sources, finding out if cannabis could be an effective treatment for you or a loved one can feel nearly impossible. This book is the comprehensive resource for people who

have not found relief from conventional medicines. Bonni Goldstein, MD, has helped thousands of patients suffering from chronic, difficult-to-treat conditions improve with cannabis. In this revelatory book, she explains the current state of scientific research on how cannabis interacts with human physiology to create homeostasis -- balance -- leading to good health. Many of the plant's compounds, including CBD and CBG, and their therapeutic effects are explained in detail. Readers will learn how to best navigate the multitude of available cannabis-based products, with detailed guidance on safety and usage, and how to customize a personalized cannabis regimen. And Dr. Goldstein presents 28 common

conditions for which patients have found cannabis treatment to be effective, including cancer, insomnia and gastrointestinal disorders. As medical cannabis laws continue to evolve, it is more vital than ever for struggling patients to understand the benefits of this plant from an honest, medicine-based perspective. Educational, practical, and thorough, *Cannabis Is Medicine* empowers patients to make informed decisions about this natural medicine and improve the quality of their lives.

Describes beliefs, customs, and traditions surrounding aging in America and suggests that awareness of these social constructions can help women resist their negative impact. After critiquing cultural myths, ageism, the politics of aging, and mainstream gerontology, she proposes a feminist "gerastology" in which older women (including minorities and lesbians) interview their peers as part of the research agenda.

Bioremediation of Pollutants: From Genetic Engineering to Genome Engineering provides insights into genetic and genome engineering strategies in bioremediation, covering a wide range of microorganisms that are key to the removal of pollutants. The book includes discussions on root engineering, transgenic plants, metagenomics, bioreactors, molecular biology tools, genome editing, synthetic biology, microbial indicators, biosurfactants, biofilms, genetically modified organisms, and engineered fungi and bacteria. Presented by top experts in the field, this resource captures the essence and diversity of bioremediation

methodologies in a single source. Students and beginners in environmental science, researchers, soil scientists, genetic and genome engineers, stakeholders and policymakers interested in improving this rapidly growing area of research will find this resource extremely useful. Draws together research from eminent scientists from across the globe in the areas of phytoremediation and microbial remediation Includes case studies of engineered bacterial remediation Covers the genome editing CRISPR-Cas9 system that has been less explored in plants and microorganisms

Recognized as the definitive reference in laboratory medicine since 1908, Henry's Clinical Diagnosis continues to offer state-of-the-art guidance on the scientific foundation and clinical application of today's complete range of laboratory tests.

Employing a multidisciplinary approach, it presents the newest information

available in the field, including new developments in technologies and the automation platforms on which measurements are performed. Provides guidance on error detection, correction, and prevention, as well as cost-effective test selection. Features a full-color layout, illustrations and visual aids, and an organization based on organ system. Features the latest knowledge on cutting-edge technologies of molecular diagnostics and proteomics. Includes a wealth of information on the exciting subject of omics; these extraordinarily complex

measurements reflect important changes in the body and have the potential to predict the onset of diseases such as diabetes mellitus. Coverage of today's hottest topics includes advances in transfusion medicine and organ transplantation; molecular diagnostics in microbiology and infectious diseases; point-of-care testing; pharmacogenomics; and the microbiome. Toxicology and Therapeutic Drug Monitoring chapter discusses the necessity of testing for therapeutic drugs that are more frequently being abused by users. The Rotarian Springer An intermediate chemistry text that combines all of

the required chemistry laboratory courses taken by chemistry majors after their first year, i.e., analytical, instrumental, organic & physical. Oriented toward early & routine use of instruments in parallel with the techniques of wet chemistry. The program is based on individual experiments of 3 to 20 hours or more in length. Laboratory Animal Medicine Jones & Bartlett Publishers This anthology is the second volume of selected articles from the periodical Childhood Education. It includes 82 articles from 1964 to 1985 that represent many aspects of the child and the child's developmental environment. Articles by leaders in the field

of childhood education, spokespersons in related fields, and teachers and parents are included. The first of the five major sections concerns the child. The articles in this section reflect the concerns and positions of the society in general: not a standardized, limited view of American culture, but a variety of subcultures and global points of view. The second section deals with the environments of the child's initial and fundamental learning experiences: the family, home, community, and world. The third section includes articles relating to the learning environment of the

school. In the fourth section, the status of the profession and the directions in which it is moving are reviewed. The articles in the final section deal with issues concerning the future of childhood education.
