One of the most significant industrial states in the country, with a powerful radical tradition, Pennsylvania was, by the early 1950s, the scene of some of the fiercest anti-Communist activism in the United States. Philip Jenkins examines the political

and social impact of the Cold War across the state, tracing the Red Scare's reverberations in party politics, the labor movement, ethnic organizations, schools and universities, and religious organizations. Among Jenkins's most provocative findings is the revelation that, although

their absolute numbers were not large, Communists were very well positioned in crucial Pennsylvania regions and constituencies, particularly in labor unions, the educational system, and major ethnic organizations. Instead of focusing on Pennsylvania's right-wing politicians (the sort represented

Most students of the war argued that the United States had "stumbled</p>

into a quagmire in Vietnam through hubris and miscalculation," as the New York Times's Fox Butterfield put it. But the perspective of time and the opening of documentary sources, including the Pentagon Papers, had allowed Gelb and Betts to probe deep into the decisionmaking leading to escalation of military action in Vietnam. The failure of Vietnam could be laid at the door of American foreign policy, they said, but the decisions that led to the failure were made by presidents aware of the risks, clear about their aims, knowledgeable about the weaknesses of their allies, and under no illusion about the outcome. The book offers a picture of a steely resolve in

government circles that, while useful in creating consensus, did not allow for alternative perspectives. In the years since its publication, *The Irony of Vietnam* has come to be considered the seminal work on the Vietnam War.

Qualitative content  
analysis is a powerful  
method for  
analyzing large  
amounts of  
qualitative data  
collected through  
interviews or focus  
groups. It is  
frequently employed  
by students, but  
introductory  
textbooks on  
content analysis  
have largely focused  
on the quantitative

version of the  
method. In one of  
the first to focus on  
qualitative content  
analysis, Margrit

students step-by step  
through: - creating a  
coding frame -  
segmenting the  
material - trying out  
the coding frame -  
evaluating the trial  
coding - carrying out  
the main coding -  
what comes after  
qualitative content

of software when  
conducting  
qualitative content

the process is  
described in detail  
and research

provided to illustrate  
each step. Frequently

important points are summarized, and end of chapter questions provide an opportunity to revise these points. After reading the book, students are fully equipped to conduct their own qualitative content analysis.

Designed for upper level undergraduate, MA, PhD students and researchers across the social sciences, this is essential reading for all those who want to use qualitative content analysis.
