"Lessons Learned" is a knowledge management approach for organizational learning and improved performance and productivity. However beneficial this approach is, few organizations have been able to implement the processes necessary for organizational success. Utilizing Evidence-Based Lessons Learned for

Enhanced Organizational Innovation and Change links the theoretical foundation of the " lessons learned " approach with current tools and evidence-based research in support of organizational development. Outlining best practices and emerging research in organizational learning, this publication is ideal for project managers, academicians, researchers, and upper-level students looking to implement these processes into their project management cycle, particularly in the risk management and quality control processes. *The Roles of Legislation, Education and Reinforcement in Changing Road User Behaviour* Oxford University Press

Mathematical Models of Attitude Change

Springer

It's hard to conceive of a topic of more broad and personal interest than the study of the mind. In addition to its traditional investigation by the disciplines of psychology, psychiatry, and neuroscience, the mind has also been a focus of study in the fields of philosophy, economics, anthropology, linguistics, computer science, molecular biology, education, and literature. In all these approaches, there is an almost universal fascination with how the mind works and how it affects our lives and our behavior. Studies of the mind and brain have crossed many exciting thresholds in recent years, and the study of mind now represents a thoroughly cross-disciplinary effort.

Researchers from a wide range of disciplines seek answers to such questions as: What is mind? How does it operate? What is

consciousness? This encyclopedia brings together scholars from the entire range of mind-related academic disciplines from across the arts and humanities, social sciences, life sciences, and computer science and engineering to explore the multidimensional nature of the human mind.

Behavior Change in the Classroom Academic Press

Exercise in later life is important for health and well-being, yet motivating older adults to exercise can be difficult. This book addresses that need by tailoring "The Transtheoretical Model" of behavior change to the client's level of readiness for change. The contributors show how TTM can be used to help older adults with varying needs and abilities to change their exercise behaviors. This book is essential for health care professionals

including nurses, exercise specialists, occupational therapists, social workers, and others interested in helping older adults incorporate exercise into their daily lives.

Behavior Change in the Human Services, Sixth Edition continues to provide a systematic introduction and overview of behavioral and cognitive principles and their applications to a wide range of problems and situations encountered in the human service professions. Designed for students and practitioners, the book uses a unique problem-solving framework to demonstrate how behavior

change principles can be applied to practice situations. Martin and Sandra Sundel feature a detailed and sequential organization that encourages readers to move progressively through material of increasing complexity and to conduct self-assessments of their knowledge. The Fifth Edition includes eight clinical case studies and many new and engaging examples that address issues such as substance abuse, child behavior problems, assertiveness, marital discord, and developing appropriate social behaviors. The expanded chapter on intervention techniques incorporates empirically tested

behavioral and cognitive strategies for addressing clinical problems such as phobias, anxiety disorders, depression, and other behavioral disorders. Current developments and trends in the field are discussed, including the movement toward evidence-based practice. This comprehensive yet accessible text also features figures, charts, and forms to demonstrate data collection and analysis. Any student pursuing a career in the helping professions, including social work, psychology, counseling, special education, nursing, and psychiatry, will find this book valuable

Understanding Industrial and Corporate Change contains pioneering work on technological, organizational, and institutional change from leading theorists and practitioners such as Joseph Stiglitz, Oliver Williamson, Masahiko Aoki, Alfred D. Chandler Jr., and Sidney Winter. Trans-disciplinary in its approach, the book explores three distinct themes: Markets and Organizations; Evolutionary Theory and Technological Change; and Strategy, Capabilities, and Knowledge Management. The chapters are drawn from the journal Industrial and Corporate Change, reflecting the diverse contributions it has published since 1992 in such areas as business

history, industrial organization, strategic management, organizational theory, innovation studies, organizational behavior, economics, political science, social psychology, and sociology. *Understanding Industrial and Corporate Change* provides an accessible account of recent research and theory on technological, organizational, and institutional change for academics and advanced students of Business and Management, *Organization Theory, Technology and Innovation Studies*, and *Industrial Economics*.

Media, Development, and Institutional Change investigates mass media s

profound ability to affect institutional change and economic development. The

authors use the tools of economics to illuminate the media s role in enabling and inhibiting political economic reforms that

promote development. The book explores how media can constrain government, how governments manipulate media to entrench their power, and how private and public media ownership affects a country's ability to prosper. The authors identify specific media-related policies governments of underdeveloped countries should adopt if they want to grow. They illustrate why media freedom is a critical ingredient in the recipe of economic development and why even the best-intentioned state involvement in media is more likely to slow prosperity than to enhance it. Scholars and students of economics, political science and sociology; policy-makers, analysts and others in the development community; and academics in media studies will find this book insightful and provocative.

This volume is comprised of contributions from leading scholars in education and psychology. In part one of the book the authors provide insight into the psychology of change, examining: What factors work as catalysts for change in environments, institutions and people What factors hinder change When change is deemed beneficial In the second part of this volume the authors turn their attention to the issue of peace education. They examine the types of problems that societies and scholars should identify

and try to solve in hopes of building more peaceful environments. The final chapter is a biography honoring Professor Gavriel (Gabi) Salomon, a significant contributor to the vast literature on change. This book is appropriate reading for professors, students and academics who are dedicated to fostering change to benefit institutions, environments and people. Behavioral and Cognitive Principles and Applications Anchor Academic Publishing (aap_verlag) Differentiation and speciation without extended isolation appear to be common among migratory animals. Historical oversight of this is probably due to temporal distortion in distribution maps and a

tendency to consider that lineages had different historical traits, such as being sedentary or much less mobile. Mobility among cyclic migrants makes population isolation difficult, and diminished levels of intraspecific differentiation occur in avian migrants (I term this "Montgomery's rule"). Nevertheless, many lineages have differentiated despite increased mobility and a high propensity for gene flow, conditions that speciation theory has not addressed adequately. Populations of seasonal migrants usually occur in allopatry and sympatry during a migratory cycle, and this distributional pattern

(heteropatry) is the focus of a model empirically developed to explain differentiation in migratory lineages. Divergence arises through disruptive selection from resource competition and heterogeneously distributed cyclic resources. Heteropatric speciation is a type of ecological speciation in which reproductive isolation increases between populations as a byproduct of adaptation to different environments that enhances breeding allopatry and allochrony despite degrees of sympatry that occur during the nonbreeding period in migration cycles. Mating or pair bonding in nonbreeding areas is

rare. Patterns such as leapfrog migration and limited morphological divergence suggest that differentiation is driven by these ecological factors rather than by sexual selection or nontemporal changes in the resource base itself, although the additional presence of either of the latter would have additive divergent effects. Migratory lineages provide a largely neglected series of natural experiments in speciation in which to test predictions stemming from this model and others focusing on ecological speciation --
Self-management Interventions SAGE Publications

Psychological Foundations of Attitudes presents various approaches and theories about attitudes. The book opens with a chapter on the development of attitude theory from 1930 to 1950. This is followed by separate chapters on the principles of the attitude-reinforcer-discriminative system; a systematic test of a learning theory analysis of interpersonal attraction; a "spread of effect" in attitude formation; Hullian learning theory; and possible origins of learned attitudinal cognitions. Subsequent chapters deal with mechanisms through which attitudes can function as both independent and dependent variables in the attitude-behavior link; and the problem of how people go about

applying a summary label to their attitudes and the reciprocal effects that rating has on the content of attitude. The final chapters discuss a commodity theory that relates selective social communication to value formation; the freedoms there are in regard to attitudes; attitude change occasioned by actions which are discrepant from one's previously existing attitudes or values; and the conflict-theory approach to attitude change.

Changing health-related behavior is for many people a lonely and isolating experience. Individual willpower is often not enough, particularly in addressing addictive behavior, but research increasingly points to the potential of

group identity to shape behavior change and support recovery. This important collection explores the social and cognitive processes that enable people who join recovery groups to address their addictive issues. In an era of increasing concern at the long-term costs of chronic ill-health, the potential to leverage group identity to inspire resilience and recovery offers a timely and practical response. The book examines the theoretical foundations to a social identity approach in addressing behavior change across a range of contexts, including alcohol addiction, obesity and crime, while also examining topics such as the use of online forums to foster recovery. It will be essential reading for students, researchers and policy makers across health psychology and social care, as well as anyone interested in behavioral change and

addiction recovery.

Nutritional status is recognized as a major determinant in health and disease. Effective treatment of chronic conditions such as obesity or of diseases of the skin requires the integration of clinical and nutritional management. Nutritional and Clinical Management of Chronic Conditions and Diseases, like its predecessor, Nutritional Aspects and Clinical Management of Chronic Disorders and Diseases, is a comprehensive reference that helps clinicians successfully integrate nutritional management with clinical

care. The book begins by discussing childhood obesity, adult obesity, and bariatric surgery. It then addresses nutritional concerns for the elderly, food allergies, and the nutritional and clinical management of pregnancy and lactation. A chapter also guides the clinician in facilitating and reinforcing patient behavior as well as behavioral changes with regard to food intake and diet. The second part of the book explains the nutritional management of specific disease conditions. Descriptions of genetic diseases and the management of errors of metabolism are followed by chapters on the immune system,

chronic oral diseases, dermatology, upper gastrointestinal cancer, and of the cachexia of chronic illness.

These chapters are characterized by detailed analyses of mechanisms.

Written by experts that treat patients in a clinical setting, *Nutritional and Clinical Management of Chronic Conditions and Diseases* translates research results into practical approaches that allow the clinician to correlate nutrition with health.

Mathematical Models of Attitude Change, Volume 1: Change in Single Attitudes and Cognitive Structure presents the mathematical models that address the

existing verbal attitude change theories, which are translated into families of mathematical models. This book discusses the two types of attitude change, namely, the attitude toward the object of the message and the attitude toward the source of the message. Organized into three parts encompassing 17 chapters, this volume begins with an overview of the mathematical models of attitude change that are derived from several theories. This text then explains the empirical work designed to test selected mathematical models of attitude change. Other chapters consider the predictions made by different models, including reinforcement, information processing, social judgment, balance, dissonance, and congruity. This book discusses as well the attitude-related variable, namely, belief and belief change. The final chapter deals with models of

change in hierarchical organized attitudes using alternative theories of attitude change. This book is a valuable resource for psychologists.

Change is an inevitable part of any

correctional institution, as new trends and initiatives constantly bombard the system. However, as budgetary constraints increasingly require correctional agencies to do more with less, a paradigm shift in the way they operate is imperative to ensure success. Correctional Administration and Change Management exam Behavior Change in the Human Services Fox Chapel Publishing This unique multidisciplinary volume examines the dynamics of behavioral change and its maintenance, from the individual to the wider domains of public policy. Coverage traces how change may be achieved, sustained, or derailed, as well as underlying neurobiological, behavioral, and social

processes that fuel unhealthy and risky behaviors. Contributors offer a wide range of prevention and intervention strategies for supporting positive health habits from improved food choices to abstinence to compliance with treatment. These mechanisms are then transferred to the societal level in studies of evolving public perception of salient issues such as climate change, gender disparities, and drug policy. Included among the topics: Motivating change in addiction via modulation of the dark side. Changing drug use and other health-related behavior in vulnerable populations. Change and maintaining change in school cafeterias. Understanding social structural barriers and facilitators to behavioral

change. Strategic communication research to illuminate and promote public engagement with climate change. A provocative rendering of motivation in its macro and micro dimensions, *Change and Maintaining Change* will interest researchers, practitioners, and clinicians interested in diverse areas such as smoking and other addictions, improvement and relapse in therapy, development and treatment of anxiety disorders, and social cognition and decision-making.
