Psychological Foundations of Attitudes presents various approaches and theories about attitudes. The book opens with a chapter on the development of attitude theory from 1930 to 1950. This is followed by separate chapters on the principles of the attitude-reinforcer-discriminative system; a systematic test of a learning theory analysis of interpersonal attraction; a "spread of effect" in attitude formation; Hullian learning theory; and possible origins of learned attitudinal cognitions. Subsequent chapters deal with mechanisms through which attitudes can function as both independent and dependent variables in the

attitude-behavior link; and the problem of how people go about applying a summary label to their attitudes and the reciprocal effects that rating has on the content of attitude. The final chapters discuss a commodity theory that relates selective social communication to value formation; the freedoms there are in regard to attitudes; attitude change occasioned by actions which are discrepant from one's previously existing attitudes or values; and the conflict-theory approach to attitude change.

Media, Development, and Institutional Change
investigates mass media's profound ability to affect institutional change and economic development. The authors use the tools of economics to illuminate the media's role in enabling and inhibiting political economic

reforms that promote development. The book explores how media can constrain government, how governments manipulate media to entrench their power, and how private and public media ownership affects a country's ability to prosper. The authors identify specific media-related policies governments of underdeveloped countries should adopt if they want to grow. They illustrate why media freedom is a critical ingredient in the recipe of economic development and why even the best-intentioned state involvement in media is more likely to slow prosperity than to enhance it. Scholars and students of economics, political science and sociology; policy-makers, analysts and others in the development community; and academics in media studies will find this book insightful and provocative.

It's hard to conceive of an array of disciplines seeking answers to such a broad and personal topic of interest than the study of the mind. In addition to its traditional investigation by the disciplines of psychology, psychiatry, and neuroscience, the mind has also been a focus of study in the fields of philosophy, economics, anthropology, linguistics, computer science, molecular biology, education, and literature. In all these approaches, there is an almost universal fascination with how the mind works and how it affects our lives and our behavior. Studies of the mind and brain have crossed many exciting thresholds in recent years, and the study of mind now represents a thoroughly cross-disciplinary effort. Researchers from a wide

array of disciplines seek answers to such questions as: What is the mind? How does it operate? What is consciousness? This encyclopedia brings together scholars from the entire range of mind-related academic disciplines from across the arts and humanities, social sciences, life sciences, and computer science and engineering to explore the multidimensional nature of the human mind.

How will the Western World manage to master the implications of the demographic change? The answer to this may be Ambient Assisted Living (AAL) that becomes the topic of this research study. The aim of the research is to present the field of AAL with relation

to home care. Furthermore, the work of the European Union (EU) in the field of AAL is presented as the EU is a major key player in enhancing research on AAL solutions that help meeting the demands of the future. Moreover, a categorization scheme of AAL solutions is developed through research evidence. Additionally, characteristics of a successful innovation given by the Diffusion of Innovations theory by E. M. Rogers are used to identify challenges for the diffusion process of AAL. Eventually, knowledge and evidence from the research conducted is used to give recommendations for the future concerning the diffusion and research directions of AAL.

"Lessons Learned" is a knowledge

management approach for organizational learning and improved performance and productivity. However beneficial this approach is, few organizations have been able to implement the processes necessary for organizational success. Utilizing Evidence-Based Lessons Learned for Enhanced Organizational Innovation and Change links the theoretical foundation of the "lessons learned" approach with current tools and evidence-based research in support of organizational development. Outlining best practices and emerging research in

organizational learning, this publication is ideal for project managers, academicians, researchers, and upper-level students looking to implement these processes into their project management cycle, particularly in the risk management and quality control processes.

Unlike the majority of construction project management textbooks out there, *Management of Construction Projects* takes a distinctive approach by setting itself in the context of a single and real-world construction project throughout and also by looking at construction project management from the constructor's perspective. This project-based learning approach emphasizes the skills, knowledge, and techniques students require to become successful project managers. This second edition uses a brand new, larger, and more challenging case study to take students through key stages of the process, including:

contracts and subcontracting; estimating, scheduling, and planning; supply chain and materials management; cost control, quality, and safety; project leadership and ethics; and claims, disputes, and project close-outs. Also new to this edition is coverage of emergent industry trends such as LEAN, LEED, and BIM. The book contains essential features such as review questions, exercises, and chapter summaries, while example plans, schedules, contracts, and other documents are stored on a companion website. Written in straightforward language from a constructor's perspective, this textbook gives a realistic overview and review of the roles of project

managers and everything they need to know in order to see a successful project through from start to finish.

Change Unwanted Behaviors Through Positive Reinforcement
CRC Press

This book offers specific evidence-based behavioral treatment plans for the most commonly observed symptoms seen in medical and clinical settings. It will address the needs of therapists who work in fast-paced clinics and

are often mandated to provide time-limited and effective treatment. Intended for early career clinicians as well as experienced psychotherapists, clear goal-directed protocols are outlined in a specific manner to assist the clinician in treating frequently reported pain complaints, somatic illnesses, anxiety, sleep difficulties, panic, agitation, anger management, and more. A brief review of symptoms is followed by specific cognitive behavioral treatment strategies, quantitative treatment tracking tools, and methods to address obstacles and facilitate progress. This clinician-friendly

manual will guide research based interventions and documentation needs, while also showing how the intervention can best be used to avoid common pitfalls in treatment.

A Guide to Implementing Peer-Mediated Interventions in Schools Fox Chapel Publishing

Using a consistent Skinnerian perspective, Behavior Analysis and Learning: A Biobehavioral Approach, Sixth Edition provides an advanced introduction to the principles of behavior analysis and learned behaviors, covering a full range of principles from basic respondent and operant

conditioning through applied behavior analysis into cultural design. The textbook uses Darwinian, neurophysiological, and biological theories and research to inform B. F. Skinner's philosophy of radical behaviorism.

The sixth edition expands focus on neurophysiological mechanisms and their relation to the experimental analysis of behavior, providing updated studies and references to reflect current expansions and changes in the field of behavior analysis. By bringing together ideas from behavior analysis, neuroscience, and epigenetics under a selectionist framework, this textbook facilitates

understanding of behavior at environmental, genetic, and neurophysiological levels. This "grand synthesis" of behavior, neuroscience, and neurobiology roots behavior firmly in biology. The book includes special sections, "New Directions," "Focus On," "Note On," "On the Applied Side," and "Advanced Section," which enhance student learning and provide greater insight on specific topics. This book is a valuable resource for advanced undergraduate and graduate students in psychology or other behavior-based disciplines, especially behavioral

neuroscience. For additional resources to use alongside the textbook, consult the Companion Website at www.routledge.com/cw/pierce.

This unique multidisciplinary volume examines the dynamics of behavioral change and its maintenance, from the individual to the wider domains of public policy.

Coverage traces how change may be achieved, sustained, or derailed, as well as underlying neurobiological, behavioral, and social processes that fuel unhealthy and risky behaviors. Contributors offer a wide range of prevention and intervention strategies for supporting positive health habits from improved food choices to abstinence to compliance with treatment. These mechanisms are then transferred to the societal level in studies of evolving public perception of salient issues such as climate change, gender disparities, and drug policy. Included among the topics: Motivating change in addiction via modulation of the dark side. Changing drug use

and other health-related behavior in vulnerable populations. Change and maintaining change in school cafeterias. Understanding social structural barriers and facilitators to behavioral change. Strategic communication research to illuminate and promote public engagement with climate change. A provocative rendering of motivation in its macro and micro dimensions, Change and Maintaining Change will interest researchers, practitioners, and clinicians interested in diverse areas such as smoking and other addictions, improvement and relapse in therapy, development and treatment of anxiety disorders, and social cognition and decision-making.
