Organizations are the dominant social invention for generating resources and distributing them. Relational Inequalities develops a general sociological and organizational analysis of inequality, exploring the processes that generate inequalities in access to respect, resources, and rewards. Framing their analysis through a relational account of social and economic life, Donald Tomaskovic-Devey and Dustin Avent-Holt explain how resources are generated and distributed both within and between organizations. They show that inequalities are produced through generic processes that occur in all social relationships: categorization and their resulting status hierarchies, organizational resource pooling, exploitation, social closure, and claims-making. Drawing on a wide range of case studies, Tomaskovic-Devey and Avent-Holt focus on the workplace as the primary organization for generating inequality

and provide a series of global goals to advance both a comparative organizational research model and to challenge troubling inequalities.

Annual Review of Sociology (Print Only for Institution) Routledge

The sociology of education is a rich interdisciplinary field that studies schools as their own social world as well as their place within the larger society. The field draws contributions from education, sociology, human development, family studies, economics, politics and public policy. Sociology of Education: An A-to-Z Guide introduces students to the social constructions of our educational systems and their many players, including students and their peers, teachers, parents, the broader community, politicians and policy makers. The roles of schools, the social processes governing schooling, and impacts on society are all critically explored. Despite an abundance of textbooks and specialized monographs, there are few up-to-date reference works in this area. Features & Benefits: 335 signed entries fill 2 volumes in print and electronic formats, providing the most comprehensive reference resource available on this topic. Cross-References and Suggestions for Further Reading guide readers to additional resources. Lifestyle Market Segmentation HarperCollins Publishers

Human beings necessarily understand their social worlds in moral terms, orienting their lives, relationships, and activities around socially-produced notions of right and wrong. Morality is sociologically understood as more than simply helping or harming others; it encompasses any way that individuals form understandings of what behaviors are better than others, what goals are most laudable, and what "proper" people believe, feel, and do. Morality involves the explicit and implicit sets of rules and shared understandings that keep human social groups intact. Morality includes both the "shoulds" and "should nots" of human activity, its proactive and inhibitive elements. At one time, sociologists were centrally concerned with morality, issues like social

cohesion, values, the goals and norms that structure society, and the ways individuals get socialized to reproduce those concerns. In the last half-century, however, explicit interest in these topics has waned, and modern sociology has become uninterested in these matters and morality has become marginalized within the discipline. But a resurgence in the topic is happening in related disciplines — psychology, neurology, philosophy, and anthropology - and in the wider national discourse. Sociology has much to offer, but is not fully engaged in this conversation. Many scholars work on areas that would fall under the umbrella of a sociology of morality but do not self-identify in such a manner, nor orient their efforts toward conceptualizing what we know, and should know, along these dimensions. The Handbook of the Sociology of Morality fills a niche within sociology making explicit the shared concerns of scholars across the disciplines as they relate to an often-overlooked dimension of human social life. It is unique in social science as it would be the first systematic compilation of the wider social structural, cultural, cross-national, organizational, and interactional dimension of human moral (understood broadly) thought, feeling, and behavior.
