CRES Test Review for the Certified Radiology Equipment Specialist Examination Mometrix Media LLC

This presentation describes various aspects of the regulation of tissue oxygenation, including the roles of the circulatory system, respiratory system, and blood, the carrier of oxygen within these components of the cardiorespiratory system. The respiratory system takes oxygen from the atmosphere and transports it by diffusion from the air in the alveoli to the blood flowing through the pulmonary capillaries. The cardiovascular system then moves the oxygenated blood from the heart to the microcirculation of the various organs by convection, where oxygen is released from hemoglobin in the red blood cells and moves to the parenchymal cells of each tissue by diffusion. Oxygen that has diffused into cells is then utilized in the mitochondria to produce adenosine triphosphate (ATP), the energy currency of all cells. The mitochondria are able to produce ATP until the oxygen tension or PO<sub>2</sub> on the cell surface falls to a critical level of about 4–5 mm Hg. Thus, in order to meet the energetic needs of cells, it is important to maintain a continuous supply of oxygen to the mitochondria at or above the critical PO<sub>2</sub>. In order to accomplish this desired outcome, the

cardiorespiratory system, including the blood, must be capable of regulation to ensure survival of all tissues under a wide range of circumstances. The purpose of this presentation is to provide basic information about the operation and regulation of the cardiovascular and respiratory systems, as well as the properties of the blood and parenchymal cells, so that a fundamental understanding of the regulation of tissue oxygenation is achieved.

The Ultimate Review Guide for the CRT Exam! Certified Respiratory Therapist Exam Review Guide is a comprehensive study guide for respiratory therapy students and graduates of accredited respiratory therapy education programs who are seeking to take the entry-level Certified Respiratory Therapist (CRT) credentialing exam from the National Board for Respiratory Care (NBRC). This unique review guide devotes extensive coverage to two problematic areas for credentialing exam candidates, which are not covered in any other review guides: 1) test-taking skills, and 2) key points to remember in taking the NBRC computerized exams. Special emphasis is also given to material and subject areas which have proven to be especially challenging for exam candidates such as basic pulmonary function testing, arterial blood gas interpretation [ABGs], monitoring critically ill patients, neonatal and pediatric care, recommending modifications to therapy, and more. Certified

Respiratory Therapist Exam Review Guide is authored by experts who take the credentialing exam annually, so you can be confident that the content and format of this guide is current! Key features include: Comprehensive discussion of material on the NEW CRT Exam Matrix Over 700 practice questions and answers with explanations Extensive Guidance on Study and Test-Taking Skills Specific Advice on Making Good Answer Choices and Avoiding Bad Ones Hundreds of Summary Tables and Illustrations Each new print copy of this review guide includes a CD-ROM with test questions that can be sorted and graded. Please note: Electronic formats of this review guide do not include the CD ROM.
