Mitosis is the
process that a
somatic cell divides
into two daughter
cells. It is an
important process
in normal organism
development.
Meiosis is the type
of cell division by
which germ cells
(eggs and sperm)
are produced.
Meiosis involves a
reduction in the
amount of genetic
material. Both
types of cell

division have similar phases: prophase, prometaphase, metaphase, anaphase and telophase.

Genetics Unit Overview Unit 4 presents genetics and its role in determining traits of organisms. Chapter 10 introduces genetics through a historical presentation of Gregor Mendel's work. Meiosis is then introduced. Chapter 11 presents the structure of DNA and replication is explained.

Transcription and translation are explained. Various mutations are described.
