A powerful argument for adopting a model of restorative justice as part of the Innocence

Movement—so exonerees, crime victims, and their communities can come together to heal In Rectify, a former Innocence Project director and journalist Lara Bazelon puts a face to the growing number of men and women exonerated from crimes that kept them

behind bars for years—sometimes decades—and that devastate not only the exonerees but also their families, the crime victims who mistakenly identified them as perpetrators, the jurors who convicted them, and the prosecutors who realized too late that they helped convict an innocent person. Bazelon focuses on Thomas Haynesworth, a teenager arrested for multiple rapes in Virginia, and Janet Burke, a rape victim who mistakenly IDed him. It took over two decades before he was exonerated. Conventional wisdom points to an exoneration as a happy ending to tragic tales of injustice, such as Haynesworth ' s. However, even when the physical

shackles are left behind, invisible ones can be profoundly more difficult to unlock. In the midst of Bazelon ' s frustration over the blatant limitations of courts and advocates, her hope is renewed by the fledgling but growing movement to apply the centuries-old practice of restorative justice to wrongful conviction cases. Using the stories of Thomas Haynesworth, Janet Burke, and other crime victims and exonerees, she demonstrates how the transformative experience of connecting isolated individuals around mutual trauma and a shared purpose of repairing harm unite unlikely allies. Movingly written and vigorously researched, Rectify takes to task the far-

reaching failures of our criminal justice system and offers a window into a future where the power it yields can be used in pursuit of healing and unity rather than punishment and blame.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work.

However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent

application.

Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community.

The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration.

Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory

certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school,

and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.

Addressing the buildup of nonperforming loans (NPLs) in Italy since the global financial crisis will remain a challenge for some time and be important for supporting a sustained, robust economic recovery. The buildup reflects both the prolonged recession as well as structural factors that have held back NPL write-offs by banks. The paper discusses the impediments to NPL resolution in Italy and a strategy for fostering a

market for restructuring distressed assets that could support corporate and financial restructuring.
