"Qualitative Research in Nursing is a user-friendly text that systematically provides a sound foundation for understanding a wide range of qualitative research methodologies, including triangulation. It approaches nursing education, administration, and practice and gives step-by-step details to instruct students on how to implement each approach. Features include emphasis on ethical considerations and methodological triangulation, instrument development and software usage; critiquing guidelines and questions to ask when evaluating aspects of published research; and tables of published research that offer resources for further reading"--Provided by publisher.

PSYCHOLOGY FOR NURSES Elsevier Health Sciences

This revised and expanded edition is a sequel to the first edition which was warmly received by the student and teaching community for its indepth analysis and refreshing approach to the subject. Psychology of Individual differences Transfer of Learning or Training Emotional Development and Emotional Intelligence Learning Disabilities and Learning Disabled Children Beginning with an introduction to the nature and scope, and the various schools of psychology, the book dis-cusses the systems propounded by Freud, Adler, Jung and Piaget, taking into account their critical importance to the subject. It then focuses on the psychology of growth and development, psychology of individual differences, motivation, attention and personality, with an emphasis on the individual's attitude towards learning, and the factors influencing learning. The text also elaborates the nature and theories of learning and the aspects of memory such as remembering and forgetting. The cognitive aspect, i.e. intelligence, and vital topics like creativity and the psychology of thinking, reasoning and problem-solving have been accorded due promi-nence. A detailed discussion on exceptional children and learning disabled children together with the educational measures for overcoming such disabilities is also included. The text concludes with an important aspect of human behaviour, namely, adjustment. Interspersed with examples, illustrations and tables, this text is ideally suited for postgraduate students of education and psychology. It can also be profitably used by teachers, teacher-educators, guidance and counselling personnel, and administrators of educational institutions.

As the oldest statewide program serving autistic people in the United States, North Carolina's Division TEACCH (Treatment and Education of Autistic and related Communication handicapped CHildren) has had a major impact on ser vices for these people and their families. As we move into our second decade, we are frequently questioned about all aspects of our procedures, techniques, and program. Of all the questions that are asked, however, the one that comes up most frequently and seems to set our program apart from others concerns the ways in which we work with families. To help answer this question we identified what we have found to be the major components in our parent-professional relationships, and we elaborate on these with the most current research informa tion, clinical insights, and community knowledge available through the expertise of our distinguished contributors. Our purpose was to collect the most recent information and to organize the resulting volume along the outlines of the par ent-professional relationship found most important in the TEACCH program. Thus, the four main sections of the book include these four major ways profes sionals work with parents: as their advocates, their trainers, their trainees, and their reciprocal emotional support source. To the extent this effort was success ful, we acknowledge that it is easier to organize book chapters along these dimensions than it is to provide their implementation in the field.
