As the oldest statewide program serving autistic people in the United States, North Carolina's Division TEACCH (Treatment and Education of Autistic and related Communication handicapped CHildren) has had a major impact on services for these people and their families. As we move into

our second decade, we are frequently questioned about all aspects of our procedures, techniques, and program. Of all the questions that are asked, however, the one that comes up most frequently and seems to set our program apart from others concerns the ways in which we work with families. To help answer this question we identified what we have found to be the major components in our parent-professional relationships, and we elaborate on these with the most current research information, clinical insights, and community knowledge available through the expertise of our distinguished contributors. Our purpose was to collect the most recent information and to organize the resulting volume along the outlines of the parent-professional

relationship found most important in the TEACCH program. Thus, the four main sections of the book include these four major ways professionals work with parents: as their advocates, their trainers, their trainees, and their reciprocal emotional support source. To the extent this effort was successful, we acknowledge that it is easier to organize book chapters along these dimensions than it is to provide their implementation in the field.

For courses in Pediatric Nursing. A comprehensive survey of family-centered pediatric nursing care

Child Health Nursing: Partnering with Children & Families promotes excellence in nursing care for infants, children, and adolescents--in hospitals and in the community. It focuses on the importance of partnering with families to adapt care plans for children based on their age, health status, and social and cultural influences. The text considers the impact of contemporary care environments on nursing practice, both in health promotion and in the care of children with acute or chronic health conditions. By offering industry best practices and practical applications, the book encourages students to apply evidence-based findings and clinical reasoning to planning superior care. The updated 3rd edition explains how modern nursing practice is affected by reforms to healthcare and its delivery--such as electronic health records, new approaches to chronic and acute condition management, and a focus on prevention. To support safe, effective, and innovative care, this edition draws on the latest recommendations of NANDA International
