Fuzzy logic is enjoying an unprecedented popularity – and for excellent reasons. It has moved successfully beyond the technological and engineering fields into areas as diverse as consumer and electronic products and systems, the stock market, and medical diagnostics.

The aggressive poaching of rhinos needs to be countered with equal aggression. So argued Prince Bernhard of the Netherlands, the founder president of the World Wide Fund for Nature (WWF), at a 1987 meeting with John Hanks, conservation expert

---

and WWF's head in Africa. The result was Operation Lock, a secret initiative funded by Prince Bernhard and staffed by former SAS operatives. Operation Lock set up headquarters in Johannesburg and extended its reach into neighbouring states: Namibia, Zambia, Botswana, Swaziland and Mozambique. Its operatives planned to train game rangers, to pose as rhino horn traders in order to entrap buyers, and to expose the kingpins who were driving the trade. It was a controversial approach, all the more because it was working within apartheid South Africa in the late 1980s. When the existence of the project was finally leaked, WWF denied any involvement, and John Hanks took the fall. In Operation Lock and the War on Rhino Poaching, John Hanks finally tells the story of these explosive events from 25 years ago. As a leading international authority on conservation, he also deals with the scourge of rhino poaching up to the present, and gives powerful and controversial criticism of some of the current policies to curb poaching.

The black and the white rhinoceros have become flagship species for international conservation. They are significant not only for the continuation of a major evolutionary heritage, but also as symbols for the protection of African savannahs. The battle

for the survival of these species has been marked by some notable successes and sadly, many failures, and the situation is still critical. The international horn trade ban and the domestic bans imposed in most traditional user states have driven the trade further underground, in some cases inflating prices and making illegal dealing even more lucrative. This Plan is aimed at donors, government and non-government organizations, and all those involved in rhino conservation. It outlines the actions and strategies needed to catalyse support for these majestic animals, and help secure their future in sub-Saharan Africa. The overall conclusion is that, given the political will, stability and adequate field expenditure, rhinos can be conserved in the wild.

Explores computer-intensive probability and statistics for ecosystem management decision making Simulation is an accessible way to explain probability and stochastic model behavior to beginners. This book introduces probability and statistics to future and practicing ecosystem managers by providing a comprehensive treatment of these two areas. The author presents a self-contained introduction for individuals involved in monitoring, assessing, and managing ecosystems and features intuitive, simulation-based explanations of probabilistic and statistical concepts. Mathematical programming details are provided for estimating ecosystem model parameters with Minimum Distance, a robust and computer-intensive method. The majority of examples illustrate how probability and statistics can be applied to ecosystem management challenges. There are over 50 exercises – making this book suitable for a lecture course in a natural resource and/or wildlife management department, or as the main text in a program of self-study. Key features: Reviews different

approaches to wildlife and ecosystem management and inference. Uses simulation as an accessible way to explain probability and stochastic model behavior to beginners. Covers material from basic probability through to hierarchical Bayesian models and spatial/ spatio-temporal statistical inference. Provides detailed instructions for using R, along with complete R programs to recreate the output of the many examples presented. Provides an introduction to Geographic Information Systems (GIS) along with examples from Quantum GIS, a free GIS software package. A companion website featuring all R code and data used throughout the book. Solutions to all exercises are presented along with an online intelligent tutoring system that supports readers who are using the book for self-study.

Gray rhinos are not random, but occur after a series of warnings and visible events. The Lehman Brothers crash of 2008, the devastating aftermath of Hurricane Sandy and other natural disasters, the file-sharing that presaged the collapse of the traditional music business model, the rising chaos in the Middle East...all were evident well in advance of the consequences. Gray rhinos are much easier to spot and guard against than "black swans"-- the rare, truly unforeseen catastrophes. Why then, when faced with solvable problems, do we continually fail to address them before they spiral out of

control? Drawing on her extensive background in policy formation and crisis management, as well as in-depth interviews with leaders from around the world, Michele Wucker explains in *The Gray Rhino* how significant crises can be recognized and countered strategically. Filled with persuasive stories, real-world examples, and practical advice, *The Gray Rhino* is essential reading for managers, investors, planners, policy makers, and anyone who wants to understand how change really occurs"-- **Complete and Easy Guide to Maintaining Your Home (This Old House)** Springer Discover BIM: A better way to build better buildings Building Information Modeling (BIM) offers a novel approach to design, construction, and facility management in which a digital representation of the building product and process is used to facilitate the exchange and interoperability of information in digital format. From the master of adventure behind the classic *Death in the Long Grass*, former big-game hunter Peter Hathaway Capstick now turns from his own exploits to those of some of the greatest hunters of the past with *Death in the Silent Places*. With his characteristic color and flair, Capstick recalls the extraordinary careers of men like Colonel J.H.

Patterson and Colonel Jim Corbett, who stalked legendary man-eaters through the silent darkness on opposite sides of the world; men like Karamojo Bell, acknowledged as the greatest elephant hunter of all time; men like the valiant Sasha Siemel, who tracked killer jaguars through the Matto Grosso armed only with a spear. With an authenticity gained by having shared the experiences he writes of, Capstick eloquently recreates the acrid taste of terror in the mouth of a man whose gun has jammed as a lion begins his charge, the exhilaration of tracking and finding a long-sought prey, the bravery and even nobility of performing under circumstances of primitive and savage stress, with death all around in the silent places of the wilderness.
