Cisco ASA, PIX, and FWSM Firewall Handbook, Second Edition, is a guide for the most commonly implemented features of the popular Cisco® firewall security solutions. Fully updated to cover the latest firewall releases, this book helps you to quickly and easily configure, integrate, and manage the entire suite of Cisco firewall products, including ASA, PIX®, and the Catalyst® Firewall Services Module (FWSM). Organized by families of features, this book helps you get up to speed quickly and efficiently on topics such as file management, building connectivity, controlling access, firewall management, increasing availability with failover, load balancing, logging, and verifying operation. Sections are marked by shaded tabs for quick reference, and information on each feature is presented in a concise format, with background, configuration, and

example components. Whether you are looking for an introduction to the latest ASA, PIX, and FWSM devices or a complete reference for making the most out of your Cisco firewall deployments, Cisco ASA, PIX, and FWSM Firewall Handbook, Second Edition, helps you achieve maximum protection of your network resources. "Many books on network security and firewalls settle for a discussion focused primarily on concepts and theory. This book, however, goes well beyond these topics. It covers in tremendous detail the information every network and security administrator needs to know when configuring and managing market-leading firewall products from Cisco." —Jason Nolet, Vice President of Engineering, Security Technology Group, Cisco David Hucaby, CCIE® No. 4594, is a lead network engineer for the University of Kentucky, where he works with health-care networks based on the Cisco Catalyst, ASA, FWSM, and VPN product lines. He was one of the beta reviewers of the ASA 8.0 operating system software. Learn about the various firewall models, user interfaces, feature sets, and configuration methods Understand how a Cisco firewall inspects traffic Configure firewall interfaces, routing, IP addressing services, and IP multicast support Maintain security contexts and flash and configuration files, manage users, and monitor firewalls with SNMP Authenticate, authorize, and maintain accounting records for firewall users Control access through the firewall by implementing transparent and routed firewall modes, address translation, and traffic shunning Define security policies that identify and act on various types of traffic with the Modular Policy Framework Increase firewall availability with firewall failover operation Understand how firewall load balancing works Generate firewall activity logs and learn how to analyze the contents of the log Verify firewall operation and connectivity and observe data passing through a firewall Configure Security Services Modules, such as the Content Security Control (CSC) module and the Advanced Inspection Processor (AIP) module This security book is part of the Cisco Press® Networking Technology Series. Security titles from Cisco Press help networking professionals secure critical data and resources, prevent and mitigate network attacks, and build end-to-end self-defending networks. The Hard Drive Bible Oxford Archaeology Monograph

Archaeological investigations, undertaken as part of a programme to restore St George's Church, Bloomsbury, to its original Hawksmoor splendour, involved the removal of 871 triple lead-lined coffins from within the crypt and monitoring works within the churchyard. The elaborate named coffins of upper middle class parishioners provided a valuable opportunity to greatly develop the new field of post-medieval coffin analysis, and to integrate historical, archaeological and osteological data in order to build a vivid picture of this population. Over 90% of coffins were named, which allowed a rare opportunity to blind test osteological methods on 72 skeletons, whilst analysis of documentary and osteological evidence has challenged some long-held beliefs in post-medieval burial archaeology. Disease patterns in the St George's assemblage were influenced by the longevity and affluence of this population, factors that also underlay the necessity for elaborate and expensive dental treatment, including very early examples of fillings, filing and dentures.

'Madame...Sir...May we come in?' This was the prelude to some dreadful news in the Germonprez household. No parent should ever have to bury a child, especially not after a suicide. The chalk outline on the pavement is a constant reminder - even when it is no longer there. Linthout draws an almost tangible pain with his immediate, rudimentary art and strong script - combined with his own personal experience.

The current shift in demographics - aging and shrinking populations - in many countries around the world presents a major challenge to companies and societies alike. One particularly essential implication is the emergence and constant growth of the so-called "silver market," the market segment more or less broadly defined as those people aged 55 and older. Increasing in number and share of the total population while at the same time being relatively well-off, this market segment can be seen as very attractive and promising, although still very underdeveloped in terms of product and service offerings. This book offers a thorough and up-to-date analysis of the challenges and opportunities in leveraging innovation, technology, product development and marketing for elder consumers and employees. Key lessons are drawn from the Japanese lead market as well as other select countries.

This book is an updated reference for one of the most exciting field of biomedical researches- Stem Cell Research and its therapeutic applications. Stem cell research holds great promise for the treatment of many human diseases that currently lack effective therapies. The set of chapters in this book provide insights into both basic stem cell biology and clinical applications of stem cell-based cell replacement therapies for a variety of human diseases, including cardiovascular diseases, neurological disorders, and li ver degeneration. It also covers novel technologies for the culture and differentiation of both human embryonic stem cells and adult tissue stem cells. This book summarizes our current state of knowledge in stem cell research and integrates basic stem cell biology with regenerative medicine in an overall context. It is an essential reference for students, postdoctoral fellows, academic and industrial scientists, and clinicians. v

In Part I, Prof. Targowski takes us through the evolution of modern computing and information systems. While much of this material is familiar to those of us who have lived through these developments, it would definitely not be familiar to our children or our students. He also introduces a perspective that I found both refreshing and useful: looking at the evolution on a country by country basis. For those of us who live in the U.S., it is all too easy to imagine that evolution to be a purely local phenomenon. I found my appreciation of the truly global nature of computing expanding as he walked me through each country's contributions. In Parts II and III, constituting nearly half of the book, Targowski provides what I would describe as an in-depth case study of the challenges and successes of informatics in Poland. As he tells each story—many of which involved him personally—the reader cannot help but better understand the close relationship between the freedoms that we in the west take for granted and the ability to produce innovations in IT. Even after Poland left the orbit of the former Soviet Union, the remaining vestiges of the old way of thinking remained a major impediment to progress. Being right and being rigorous were far less important than being in tune with the “approved” ways of thinking. There are important lessons to be learned here, particularly as we try to project how IT will evolve in rapidly developing economies such as China. But, from my experience, they apply equally well to western academia, where moving outside of preferred values and patterns of research can lead a scholar to be ignored or even disparaged. In Part IV, Targowski presents a bold, forward-looking synthesis of informatics and informing science in the future. Building upon articles recently published in *Informing Science: The International Journal of an Emerging Transdiscipline*, he presents a conceptual scheme of historical informing waves that builds upon historians such as Toynbee. He then considers how these trends will necessarily force us to rethink how we develop and apply IT. He does not steer away from the controversial. But he also provides cogent arguments for all his predictions and recommendations.
