Review The images - rich in color and visual rhythm - span 30 years and several continents. Of course, Haiti and the Mexican border are well represented, locales that opened up a new way to see. He has been able to render Haiti - a place often depicted for its chaos - with a precise eye, finding personal moments that are as still as they are complex. He can use shadows as skillfully as a be-bop musician to set the tempo. The people in his frames can look like dwarfs being stomped on by giant, disembodied feet. He can make an American street seem far more foreboding than any Third

World slum. (David Gonzalez The New York Times 2011-12-18) A 30-year retrospective of a great, and often overlooked, American pioneer of colour photography who pays scant regard to genre boundaries, merging art photography, photojournalism and often complex street photographs. (Sean O'Hagan The Guardian 2011-12-13) In far-flung corners of the globe, Webb captures glimpses of beauty in impoverished lives and stoicism in the face of strife. Unique in its integration of individual topics to achieve a full-system approach, this book addresses all the aspects essential for industrial inkjet printing. After an introduction listing the industrial printing techniques available, the text goes on to discuss individual topics, such as ink, printheads and substrates, followed by metrology techniques that are required for reliable systems. Three iteration cycles are then described, including the adaptation of the ink to the printhead, the optimization of the ink to the substrate and the integration of machine manufacturing, monitoring, and data handling, among others. Finally, the book summarizes a number of case studies and success stories from selected areas, including graphics, printed electronics, and 3D printing as well a list of ink suppliers, printhead manufacturers and integrators. Practical hints are included throughout for a direct hands-on experience. Invaluable for industrial users and academics, whether ink developers or mechanical engineers, and working in areas ranging from metrology to intellectual property.
