International human rights law and international humanitarian law share the goal of preserving the dignity and humanity of all. Over the years, the General Assembly, the Commission on Human Rights and, more recently, the Human Rights Council have considered that, in armed conflict, parties to the conflict have legally binding obligations concerning the rights of persons affected by the conflict. Although different in scope, international human rights law and international humanitarian law offer a series of protections to persons in situations of armed conflict, whether civilians, persons who are no longer participating directly in hostilities or active participants in the conflict. This publication provides a thorough legal analysis and guidance to State authorities, human rights and humanitarian actors and others on the application of international human rights law and international humanitarian law for the protection of persons.

data. Furthermore, the European Union established clear basic principles for the collection, storage and use of personal data by governments, businesses and other organizations or individuals in Directive 95/46/EC and Directive 2002/58/EC on Privacy and Electronic communications. Nonetheless, the twenty-first century citizen – utilizing the full potential of what ICT-technology has to offer – seems to develop a digital persona that becomes increasingly part of his individual social identity. From this perspective, control over personal information is control over an aspect of the identity one projects in the world. The right to privacy is the freedom from unreasonable constraints on one's own identity. Transaction data – both traffic and location data – deserve our particular attention. As we make phone calls, send e-mails or SMS messages, data trails are generated within public networks that we use for these communications. While traffic data are necessary for the provision of communication services, they are also very sensitive data. They can give a complete picture of a person's contacts, habits, interests, activities and whereabouts. Location data, especially if very precise, can be used for the provision of services such as route guidance, location of stolen or missing property, tourist information, etc. In case of emergency, they can be helpful in dispatching assistance and rescue teams to the location of a person in distress. However, processing location data in mobile communication networks also creates the possibility of permanent surveillance.

Despite being told that we now live in a cosmopolitan world, more and more people have begun to assert their identities in ways that are deeply rooted in the local. These claims of autochthony—meaning “born from the soil”—seek to establish an irrefutable, primordial right to belong and are often employed in politically charged attempts to exclude outsiders. In *The Perils of Belonging*, Peter Geschiere traces the concept of autochthony back to the classical period and incisively explores the idea in two very different contexts: Cameroon and the Netherlands. In both countries, the momentous economic and political changes following the end of the cold war fostered anxiety over migration. For Cameroonians, the question of who belongs where rises to the fore in political struggles between different tribes, while the Dutch invoke autochthony in fierce debates over the integration of immigrants. This fascinating comparative perspective allows Geschiere to examine the emotional appeal of autochthony—as well as its dubious historical basis—and to shed light on a range of important issues, such as multiculturalism, national citizenship, and migration.

The star of *The Incredible Dr. Pol* shares his amusing, and often poignant, tales from his four decades as a vet in rural Michigan. Dr. Jan Pol is not your typical veterinarian. Born and raised the Netherlands on a dairy farm, he is the star of *Nat Geo Wild's* hit show *The Incredible Dr. Pol* and has been treating animals in rural Michigan since the 1970s. Dr. Pol's more than 20,000 patients have ranged from white mice to 2600-pound horses and everything in between. From the time he was twelve years old and helped deliver a litter of piglets on his family's farm to the

incredible moments captured on his hit TV show, Dr. Pol has amassed a wealth of stories of what it's like caring for this menagerie of animals. He shares his own story of growing up surrounded by animals, training to be a vet in the Netherlands, and moving to Michigan to open his first practice in a pre fab house. He has established himself as an empathetic yet no-nonsense vet who isn't afraid to make the difficult decisions in order to do what's best for his patients—and their hard-working owners. A sick pet can bring heartache, but a sick cow or horse could threaten the very livelihood of a farmer whose modest profits are dependent on healthy livestock. Reminiscent of the classic books of James Herriot, *Never Turn Your Back on an Angus Cow* is a charming, fascinating, and funny memoir that will delight animal lovers everywhere.

The late twentieth-century transition from a paper-oriented to a media-oriented society has triggered the emergence of Audiovisual Translation as the most dynamic and fastest developing trend within Translation Studies. The growing interest in this area is a clear indication that this discipline is going to set the agenda for the theory, research, training and practice of translation in the twenty-first century. Even so, this remains a largely underdeveloped field and much needs to be done to put Screen Translation, Multimedia Translation or the wider implications of Audiovisual Translation on a par with other fields within Translation Studies. In this light, this collection of essays reflects not only the “state of the art” in the research and teaching of Audiovisual Translation, but also the professionals' experiences. The different contributions cover issues ranging from reflections on professional activities, to theory, the impact of ideology on Audiovisual Translation, and the practices of teaching and researching this new and challenging discipline. In expanding further the ground covered by the John Benjamins' book (Multi)Media Translation (2001), this book seeks to provide readers with a deeper insight into some of the specific concepts, problems, aims and terminology of Audiovisual Translation, and, by this token, to make these specificities emerge from within the wider nexus of Translation Studies, Film Studies and Media Studies. In a quickly developing technical audiovisual world, Audiovisual Translation Studies is set to become the academic field that will address the complex cultural issues of a pervasively media-oriented society.

This unprecedented book provides a comprehensive examination of the issue of protecting journalists in conflict situations from both a practical and humanitarian law perspective. Violent criminals and corrupt governmental officials harass, co-opt, and kill local and foreign journalists in countries from Mexico to Afghanistan, to Russia and the Philippines. Staggeringly, there has been little or no prosecution in 89 percent of journalist murders worldwide. Such widespread impunity is arguably one of the greatest threats to press freedom. A number of international organizations and advocates have developed efforts to mitigate this problem, but belligerents continue to act with few restraints and little, if any, accountability. *War on Words: Who Should Protect Journalists?* is an examination of the deteriorating and dangerous environment facing journalists and what stakeholders are doing to address this serious problem threatening democracy worldwide. The authors explore the peril facing journalists, delve into the legal and practical history of press protection, evaluate current safety strategies for journalists, and gather opinions from an array of local and

international correspondents and practitioners on how to improve this untenable situation.

'Goold and Campbell, leading thinkers on corporate-level strategy, have turned their attention to corporate-level organization design. They bring a rigor to this topic that will help managers wrestling with multiple reporting dimensions, decentralization and cross-unit co-ordination.' Professor Gary Hamel, London Business School. Author of *Competing for the Future* and *Leading the Revolution*. 'Campbell and Goold are renowned for discovering entirely new and useful dimensions to seemingly familiar business issues. This book is another shining example. It allows executives to replace politics and personality as the rationales for an organizational design with clear, effective logic and experience.' Thomas H. Davenport, Director, Accenture Institute for Strategic Change. Author of *Process Innovation and Working Knowledge*. 'A "must read" for managers and consultants. Redesigning the organization is the most powerful and fastest means for aligning decisions and behavior with strategic objectives. Goold and Campbell provide the best and most comprehensive framework for developing and testing the validity of an organizational structure I have seen in recent years. Based on years of research and experience they offer clear principles and a process to guide managers in the many design decisions and trade-offs involved in developing a more effective organization.' Professor Michael Beer, Harvard Business School. Author of *The Critical Path to Corporate Renewal*. 'Books on organization design tend to fall into one of two categories: those that provide interesting concepts but not help on how to implement them and those that are full of check lists on implementation, based on sterile and over-simplified ideas. Michael Goold and Andrew Campbell have written perhaps the finest example of an exception I have ever seen - a very practical book, with detailed guidelines on implementation, yet based on a rich and sophisticated understanding of the real challenges of organization design. It will be of immense use to all careful readers.' Professor Sumantra Ghoshal, London Business School. Author of *The Individualized Corporation* and *Managing Across Borders*. 'As companies search for all sources of competitive advantage, many are discovering that the ability to organize and execute complex strategies is an important one. Campbell and Goold have again provided us with a good process through which leaders can give organizing its deserved focus.' Professor Jay Galbraith, author of *Designing the Global Corporation*. 'Campbell and Goold bring much needed clarity and precision to the language of organizational design and show how this can help managers avoid the misunderstandings and differing interpretations that frequently undermine new organization structures.' Paul Coombes, Director, Organization Practice Area, McKinsey & Company. 'Organization change is close to the top of many companies' agendas. Goold and Campbell's book equips you with ideas and frameworks to take on the journey. The real-world examples help make it both pragmatic and readable.' Steve Russell, Chief Executive, The Boots Company plc. 'An impressive work. The taxonomy of organizational units and organigram symbols will be especially useful to managers working on structures.' Philip Sadler, Patron, The Centre for Tomorrow's Company. Author of *The Seamless Organization*. 'Incredibly relevant in helping to pull together a complicated structure based around the dimensions of channels, products, customers and geography - immensely clear and valuable.' David Roberts, Chief Executive, Personal Financial Services, Barclays plc. 'A welcome breakthrough in designing more effective corporate organization structures. The nine design tests of Goold and Campbell are a valuable addition to an otherwise sparse toolkit.' Jim Haymaker, Vice President, Strategy & Business Development, Cargill Inc. ...
