Regardless of your age, race,
religion, sex, political
affiliation or national origin -
we should all have one
common denominator - Health.

We only get one shot at life and when health is gone, nothing else matters. The human mind and body comprise the most sophisticated "machine" on earth. Our bodies are far more sensitive and complex than any automobile, DVD player or other man-made item; but unlike those products, we don't come with an instruction manual at birth. This Health and Happiness guide offers common sense advice to help the average person make better decisions regarding their mind and body. Health reform starts with the daily choices we make - choosing to read this book is

the first step in the right direction.

Robin addresses any lingering skepticism readers may have about whether slow cookers can have delicious, meat-

free applications, and she shows how to take into account the water content of vegetables and the absorptive qualities of grains when plant-based slow-cooking. Altogether, this new edition offers you an abundance of ways to expand your plant-based repertoire and to get maximum value from your investment in a slow cooker.

A behind-the-scenes history of computer graphics, featuring a cast of math nerds, avant-garde artists, cold warriors, hippies, video game players, and studio executives.

Computer graphics (or CG) has changed the way we experience the art of moving images. Computer graphics is the difference between Steamboat Willie and Buzz Lightyear, between ping pong and PONG. It began in 1963

when an MIT graduate student named Ivan Sutherland created Sketchpad, the first true computer animation program. Sutherland noted: “ Since motion can be put into Sketchpad drawings, it might be exciting to try making cartoons.” This book, the first full-length history of CG, shows us how Sutherland's seemingly offhand idea grew into a multibillion dollar industry. In Moving

Innovation, Tom Sito—himself an animator and industry insider for more than thirty years—describes the evolution of CG. His story features a memorable cast of characters—math nerds, avant-garde artists, cold warriors, hippies, video game enthusiasts, and studio executives: disparate types united by a common vision. Sito shows us how fifty years of work by this motley crew made

movies like Toy Story and Avatar possible. Moving Innovation Artisan * This timely new edition covers technological changes to broadband wireless access, including competing standards to WiMax, mobile entertainment, and new data backup systems. * Shows wireless operators how to plan a broadband wireless network for the greatest return on investment in the shortest possible time. * Municipal wireless networks are expanding throughout the United States and Europe, where the wired

infrastructure is too old to support the volume of Internet traffic and where modern cable is too expensive for most Internet users.

This volume covers the basic principles and techniques of

specifying systems and languages. It deals with modelling the semiotics (pragmatics, semantics and syntax of systems and languages), modelling spatial and simple temporal phenomena, and such specialized topics as modularity (incl. UML class diagrams), Petri nets, live sequence charts, statecharts, and temporal logics, including the duration calculus. Finally, the book presents techniques for interpreter and compiler development of functional, imperative, modular and parallel programming languages.

This book is targeted at late undergraduate to early graduate university students, and researchers of programming methodologies. Vol. 1 of this series is a prerequisite text.

The riveting and suspenseful account of two young FBI agents in a pursuit of a drug cartel's most fearsome leader, Miguel Treviño Drugs, money, cartels: this is what FBI rookie Scott Lawson expected when he was sent to the border town of Laredo, but instead he 's deskbound writing intelligence reports about the drug war. Then, one day, Lawson is asked to check out

an anonymous tip: a horse was sold at an Oklahoma auction house for a record-topping price, and the buyer was Miguel Treviño, one of the leaders of the Zetas, Mexico's most brutal drug cartel. The source suggested that Treviño was laundering money through American quarter horse racing. If this was true, it offered a rookie like Lawson the perfect opportunity to infiltrate the cartel.

Lawson teams up with a more experienced agent, Alma Perez, and, taking on impossible odds, sets out to take down one of the world's most fearsome drug lords. In *Bloodlines*, Emmy and National Magazine Award-winning journalist Melissa del Bosque follows Lawson and Perez's harrowing attempt to dismantle a cartel leader's American racing dynasty built on

extortion and blood money. With extensive access to investigative evidence and in-depth interviews with key players, del Bosque turns more than three years of research and her decades of reporting on Mexico and the border into a gripping narrative about greed and corruption. *Bloodlines* offers us an unprecedented look at the inner workings of the Zetas and US federal agencies, and

opens a new vista onto
the changing nature of
the drug war and its
global expansion.
