With the ancient epic Mahabharat as her source, and the battle of Kurukshetra as a central motif, Mahasweta Devi weaves three stories in which we visit unexpected alleys and by-lanes of the traditional epic saga, and look at events from the eyes of women marginalized, dispossessed, dalit. Their eyes condemn the wanton waste and inhumanity of war. This Kurukshetra is not the legendary Dharmayuddha of the popular imagination but rather a cold-blooded power game sacrificing countless human lives. How do the women s quarters of the palace, a colourless place of shadowy widowhood, appear to five peasant women whose lives are no less shattered by the Kurukshetra massacre, but who are used to dealing with trauma in a more robust manner? How does their outlook on life and survival influence the young pregnant princess who is abruptly plunged into the half-life of uppercaste widowhood? How does a lower caste serving woman, who was brought in to service king Dhritarashtra when his queen was with child, view her half-royal offspring and his decision to perform the last rites for a father who never acknowledged him as a son? How does an ageing Kunti, living out her last years in the forest, come to terms with her guilt over her unacknowledged son, Karna? And, having finally voiced her shame aloud, how then does she face up to a crime she has not even remembered: the murder of a family of nishad forest dwellers? These tales, brewed in the imagination of a master story-teller, make us look at the Mahabharata with new eyes, insisting as they do on the inclusion, within the master narrative, of the fates and viewpoints of those previously unrepresented therein: women and the underclass. MAHASWETA DEVI is one of India s foremost writers. Her powerful, satiric fiction has won her recognition in the form of the Sahitya Akademi (1979), Jnanpith (1996) and Ramon Magsaysay (1996) awards, the title of Officier del Ordre Des Arts Et Des Lettres (2003) and the Nonino Prize (2005), amongst several other literary honours. She was also awarded the Padmasree in 1986, for her activist work amongst dispossessed tribal communities. ANJUM KATYAL is as an editor who has also translated several plays and short stories.

The Power of Plagues presents a rogues' gallery of epidemic- causing microorganisms placed in the context of world history. Author Irwin W. Sherman introduces the microbes that caused these epidemics and the people who sought (and still seek) to understand how diseases and epidemics are managed. What makes this book especially fascinating are the many threads that Sherman weaves together as he explains how plagues past and present have shaped the outcome of wars and altered the course of medicine, religion, education, feudalism, and science. Cholera gave birth to the field of epidemiology. The bubonic plague epidemic that began in 1346 led to the formation of universities in cities far from the major centers of learning (and hot spots of the Black Death) at that time. And the Anopheles mosquito and malaria aided General George Washington during the American Revolution. Sadly, when microbes have inflicted death and suffering, people have sometimes responded by invoking discrimination, scapegoating, and quarantine, often unfairly, against races or classes of people presumed to be the cause of the epidemic. Pathogens are not the only stars of this book. Many scientists and physicians who toiled to understand, treat, and prevent these plagues are also featured. Sherman tells engaging tales of the development of vaccines, anesthesia, antiseptics, and antibiotics. This arsenal has dramatically reduced the suffering and death caused by infectious diseases, but these plague protectors are imperfect, due to their side effects or attenuation and because microbes almost invariably develop resistance to antimicrobial drugs. The Power of Plagues provides a sobering reminder that plagues are not a thing of the past. Along with the persistence of tuberculosis, malaria, river blindness, and AIDS, emerging and remerging epidemics continue to confound global and national public health efforts. West Nile virus, Lyme disease, and Ebola and Zika viruses are just some of the newest rogues to plague humans. The argument that civilization has been

shaped to a significant degree by the power of plagues is compelling, and The Power of Plagues makes the case in an engaging and informative way that will be satisfying to scientists and non-scientists alike.

Follow two abolitionists who fought one of the most shockingly persistent evils of the world: human trafficking and sexual exploitation of slaves. Told in alternating chapters from perspectives spanning more than a century apart, read the riveting 19th century first-hand account of Harriet Jacobs and the modern-day eyewitness account of Timothy Ballard. Harriet Jacobs was an African-American, born into slavery in North Carolina in 1813. She thwarted the sexual advances of her master for years until she escaped and hid in the attic crawl space of her grandmother's house for seven years before escaping north to freedom. She published an autobiography of her life, Incidents in the Life of a Slave Girl, which was one of the first open discussions about sexual abuse endured by slave women. She was an active abolitionist, associated with Frederick Douglass, and, during the Civil War, used her celebrity to raise money for black refugees. After the war, she worked to improve the conditions of newly-freed slaves. As a former Special Agent for the Department of Homeland Security who has seen the horrors and carnage of war, Timothy Ballard founded a modern-day "underground railroad" which has rescued hundreds of children from being fully enslaved, abused, or trafficked in third-world countries. His story includes the rescue and his eventual adoption of two young siblings--Mia and Marky, who were born in Haiti. Section 2 features the lives of five abolitionists, a mix of heroes from past to present, who call us to action and teach us life lessons based on their own experiences: Harriet Tubman--The "Conductor"; Abraham Lincoln--the "Great Emancipator"; Little Mia--the sister who saved her little brother; Guesno Mardy--the Haitian father who lost his son to slave traders; and Harriet Jacobs--a teacher for us all.

Responding to recent developments and a growing VLSI circuit manufacturing market, Technology Computer Aided Design: Simulation for VLSI MOSFET examines advanced MOSFET processes and devices through TCAD numerical simulations. The book provides a balanced summary of TCAD and MOSFET basic concepts, equations, physics, and new technologies related to TCAD and MOSFET. A firm grasp of these concepts allows for the design of better models, thus streamlining the design process, saving time and money. This book places emphasis on the importance of modeling and simulations of VLSI MOS transistors and TCAD software. Providing background concepts involved in the TCAD simulation of MOSFET devices, it presents concepts in a simplified manner, frequently using comparisons to everyday-life experiences. The book then explains concepts in depth, with required mathematics and program code. This book also details the classical semiconductor physics for understanding the principle of operations for VLSI MOS transistors, illustrates recent developments in the area of MOSFET and other electronic devices, and analyzes the evolution of the role of modeling and simulation of MOSFET. It also provides exposure to the two most commercially popular TCAD simulation tools Silvaco and Sentaurus. • Emphasizes the need for TCAD simulation to be included within VLSI design flow for nano-scale integrated circuits •

Introduces the advantages of TCAD simulations for device and process technology characterization • Presents the fundamental physics and mathematics incorporated in the TCAD tools • Includes popular commercial TCAD simulation tools (Silvaco and Sentaurus) • Provides characterization of performances of VLSI MOSFETs through TCAD tools • Offers familiarization to compact modeling for VLSI circuit simulation R&D cost and time for electronic product development is drastically reduced by taking advantage of TCAD tools, making it indispensable for modern VLSI device technologies. They provide a means to characterize the MOS transistors and improve the VLSI circuit simulation procedure. The comprehensive information and systematic approach to design, characterization, fabrication, and computation of VLSI MOS transistor through TCAD tools presented in this book provides a thorough foundation for the development of models that simplify the design verification process and make it cost effective.

All seven volumes of Mel Bay's original, internationally acclaimed Modern Guitar Method series are included in this single, deluxe master compilation. No other comparable method exists for the guitar! As Mr. Bay perceived the need for a guitar method that would effectively teach beginning guitarists to read music, this method is intentionally written in standard notation only, providing just enough music theory to understand what the student is required to play at any given point. Although fingerstyle technique can be applied to the pieces and studies, this book is specifically tailored for the plectrum-style player. Contains hundreds of beginner through advanced solos and duets in all fretboard positions and all keys, plus all four-note rhythm chord formations on high, middle and low sets of adjacent strings. This edition also includes additional outstanding plectrum guitar solo arrangements not found in the original seven volumes. All in all, this outstanding method leads the student to total mastery of the fretboard.

Creating Effective Learning Environments takes curriculum development to another level: it fills the gap between theory and practice. This text helps readers see the curriculum from a child's perspective and understand how that perspective is linked to learning and theory. It is the author's view that the centre of any curriculum is the child; this text begins not with general theories or applications that are suitable for many, but with each individual child. The theory and methodology of this text are integrated around the actual experiences of children, presented in a logical flow, and embracing current philosophies about integration, play, bias, and learning practices.

"This book, though, is based on teaching two University of Illinois at Urbana-Champaign (UIUC) courses over the past 20 years, a first-year engineering design graphics course and a 400 level CAD technology and design thinking course. Thus, additional goals are to present a cornerstone to capstone treatment of computer-aided design and to provide a solid foundation in engineering design. The cornerstone component includes engineering graphics, freehand sketching, CAD modeling, spatial visualization, and an introduction to design using reverse engineering and product dissection. The capstone phase (2nd, 3rd, 4th year, senior design) includes the different kinds of CAD (parametric vs direct, solid vs NURBS surface, freeform, BIM), additive manufacturing, 3D scanning and reality capture, simulation and generative design, as well as engineering design, human-centered design, and design thinking"--

Intended as the primary text for introductory courses on medical anthropology, this book integrates human biological data relevant to health and disease with both evolutionary theory and the social environments that more often than not produce major challenges to health and survival. Because students who take this fastest-growing anthropology course come from a variety of disciplines (anthropology, biology, especially pre-med students, and health sciences, especially), the text does not assume anything beyond a basic high-school level familiarity with human biology and anthropology. The authors first present basic biological information on a particular health condition and then expand their analysis to include evolutionary, historical, and cross-cultural perspectives. Among the topics covered are nutrition, infectious disease, stress, reproductive health, behavioral disease, aging, race/racism and health, mental health, and healers and healing.
