This is to be initial, 'overview' volume of a series on the "Chemistry of Advanced Materials". This series of volumes is intended to complement VCH's existing series on "Materials Science and Technology" and, in particular, to highlight the role of chemistry in the preparation and processing of advanced materials. The introductory volume in the series is intended to "set the stage" for the succeeding volumes and to introduce the subject of materials chemistry to a general audience of scientifically literate nonspecialists. Subjects covered in this initial volume will eventually be the subject of one or more individual volumes in the series. This series is directed to a broad audience of chemists and materials scientists. This volume, in particular, should be appropriate for a general scientific audience and be of interest, as well as comprehensible, even to undergraduate students in chemistry and materials science.

TOEIC

Physics and Chemistry of the Solar System focuses on planetary physics and chemistry. This book consists of 12 chapters. Chapters I to IV cover the general properties and environment of the planetary system. The solar system beyond Mars is elaborated in Chapters V to VIII, while the inner solar system is considered in Chapters XI to XII. In these chapters, this compilation specifically discusses the limitations on big bang nucleosynthesis; structure and classification of galaxies; and mass and angular momentum distribution. The radio wave propagation in space plasmas; interiors of Jupiter and Saturn; density and composition of icy satellites; and evaporation and non-gravitational forces are also deliberated. This text also explains the physical properties of meteorites; geology of the Moon; geophysical data on Mars; and search for extraterrestrial intelligence. This publication is a good reference for first-year graduate students who intend to take graduate courses in specialized areas of planetary sciences, as well as practicing Ph.D. scientists with training in physics, chemistry, geology, astronomy, meteorology, and biology.
