Richly illustrated and entertainingly written, *The Big Book of Tiny Cars* presents lively profiles of the automotive world's most famous—and infamous—microcars and subcompacts from 1901 to today. From tiny homes to little lending libraries and even tiny food, people everywhere are resetting the premium they put on size. Fact is, the automotive industry has a “tiny” history going back to the car's earliest days.

Beginning with the Curved Dash

Oldsmobile and continuing through prewar classics such as the Austin Seven and Hanomag Kommissbrot, *The Big Book of Tiny Cars* is truly international in scope. Witness diminutive cars like the Bond Minicar and the BMW Isetta introduced to fuel-deprived postwar Europe, and continue through the classic 1950s microcars and '70s subcompacts, right up to today's tiny cars and electric vehicles (EVs) from the likes of Smart and Fiat. In addition to iconic curiosities like the frog-like Goggomobil Dart, the futuristic Sebring Vanguard Citicar, and the three-wheeled Reliant Robin, you'll read

about more familiar classics like the VW Beetle, MiniCooper, and Crosley Super Sport. Other manufacturers represented include Honda, Datsun, Mitsubishi, Trabant, Heinkel, Renault, and Messerschmitt, to name a few. Each car is profiled with an entertaining and informative history and a fact box. Imagery includes archival photos, period ads, and modern photography. In all, more than 100 cars are included, from the weird to the sublime. Gas, diesel, or electric...tiny cars have a rich and curious heritage reflective of motorists' concerns for their pocketbook, the environment, or both. *The Big Book of Tiny Cars* is your ultimate collection of microcars, minicars, bubble cars, kei cars, subcompacts, and compacts that have been built, sold, and driven all over the globe for 120 years.

The editors, aware of the recent work in evolutionary theory and the science of chaos and complexity, challenge the sometimes deterministic flavor of this subject. They are interested in uncovering the place of agency in these theories that take history so seriously. In the end, they are as interested in path creation and destruction as they are in path dependence. This book is compiled of both theoretical and empirical writings. It shows relatively well-known industries, such as the automobile, biotechnology, and semi-

conductor industries in a new light. It also invites the reader to learn more about medical practices, wind power, lasers, and synthesizers. Primarily written for academicians, researchers, and Ph.D. students in fields related to technology management, this book is research-oriented and will appeal to all managers.

Gary Stephens is brought into a government-sanctioned cover-up when he discovers that his father helped fake the Apollo 11 moon landing in the 1960s. After China announce a space mission to place their own flag next to the one US astronauts planted during the Apollo 11 mission, few people bat an eyelid. Shortly after this statement Charlie Stephens, a 81-year-old former filmmaker, is murdered. The incident is made to look like an accident, but why? Going through his father's effects, Gary Stephens - a director of beer and yogurt ads - discovers seven cans of old 35mm film. Dated before the landing, they're identical to the footage NASA claims was shot by the Apollo 11 crew. The US flag is not and has never been in the Sea of Tranquillity, and only Tricky Dick and a handful of others knew it. Why was the real nature of the Apollo 11 mission kept hidden? And what measures will be taken to keep the secret buried?
